IMPORTANT FEATURES OF YOUR IC MASTER

ONE COMPLETE SOURCE

IC MASTER is the original and only complete guide to currently available integrated circuits, microcomputer boards, development systems. PROM programmers, gate arrays, and other related components of concern to the design engineer. It has become the first place to look in the critical selection of ICs, boards, systems, and equipment. If only one device can fit the requirements of a new design or if hundreds are available, you can find out in seconds by using the IC MASTER.

EASY TO USE

The IC MASTER saves you time. No longer do you have to spend long, tedious hours and days searching through manufacturers' catalogs and data sheets for information. The MASTER gives you—at your fingertips—an easy way to narrow your IC choices quickly, accurately, and systematically with the knowledge that you have just surveyed the entire industry.

PART NUMBER INDEX

This revolutionary index lists all device types made by over 225 manufacturers in numerical sequence excluding prefixes or suffixes. You can find a device number even though you do not know either the full part number or even the manufacturer. Once a basic device number is located in the index, you can obtain instant identification of all manufacturers making a device by that number, regardless of function, and determine the full part number designation. All page references to data sheet material and any existing application note abstracts are also provided. The Part Number Index should not be used as an alternate source directory because two manufacturers may use the same part number, by coincidence, for totally different devices.

PART NUMBER GUIDE

The information in this guide allows you to break down each company's part numbering system into product temperature ranges, packaging variations, and functions. It is an invaluable tool for the elimination of costly and time-consuming ordering errors caused by lack of standardization from manufacturer to manufacturer in part numbering systems.

APPLICATION NOTE DIRECTORY

Application note descriptions are arranged alphabetically by function and application category. Each note's description identifies the specific device or devices featured, provides a 25 to 30 word abstract, and identifies both the manufacturer that originated the note and the specific application note number. This section provides all the information necessary for you to update your application note files speedily, or thoroughly research the existence of application note material for a specific design problem.

MILITARY PARTS DIRECTORY

Cross reference chart identifies all IC devices having received JAN qualification. This chart includes a cross reference listing of device numbers and corresponding military standard 38510 slash numbers and vice versa.

MILITARY DEVICE TESTING TABLE

This table identifies IC manufacturers who test to military standard 38510 and the screening to military standard 883 that they provide.

MILITARY PARTS INDEX

This guide to JAN qualifed parts makes it possible to search devices by function, and to determine if a JAN qualified part exists for a particular functional need.

ADVERTISERS' PRODUCT INDEX

This index directs the reader to detailed product information for the parts whose manufacturers have included data sheets in IC MASTER. When you are looking for data on a particular manufacturer's products, this index provides the fastest way to find the information you seek.

ALTERNATE SOURCE DIRECTORY

The most comprehensive industry-wide, pin-for-pin, functional equivalent Alternate Source Directory ever compiled. This directory is updated by asking all IC manufacturers to identify each competitive device for which they make a pin-for-pin substitute.

MASTER SELECTION GUIDE

Each guide is organized by specifications and categories to direct the reader easily and quickly to the device most likely to fill the requirements of a particular application. Once the reader finds those devices that are closest to his needs, he sees available sources, and is directed to additional data if provided by advertisers.

MANUFACTURERS AND DISTRIBUTORS DIRECTORY

Locations and phone numbers are given for manufacturers' field sales offices, representatives, and distributors, both domestic and international.

Typical Problems Solved by IC MASTER

- **Find All Products That Meet Desired Specifications**
- **Obtain Data For A Particular Device • Decode Part Numbers**
- **Determine Alternate Sources • Plus Much More**

An engineer can use IC MASTER to solve a wide variety of problems. Answers provided to engineers by IC MASTER can range from finding the device that best meets a particular set of specifications to helping to determine which family of devices should be used in building a system.

Some of the typical problems that IC MASTER can solve are illustrated in the following examples:

Who makes a TTL 4-bit binary full-adder with look-ahead carry?

All functions are listed, in alphabetical order, in the Master Selection Guide Index. In this case, the engineer looks under adders; in the column adjacent to adders, he sees that all types of adders are listed. The particular adder being sought is covered in the Digital section of IC MASTER.

Now that the engineer knows that the devices he seeks are catalogued in the Digital section, he can turn to the Digital Master Selection Guide and see the page number where information on these devices can be obtained.

When he turns to this page, he will notice that certain device numbers and manufacturers are printed in bold face type while others appear in regular type face. Bold face type is used whenever a part's manufacturer has provided a data sheet for the device in IC MASTER. The page number assigned to the data sheet also appears in bold face type so that the engineer can turn to it directly.

Who Makes a High-Speed 12-Bit, Analog-to-Digital Converter With Guaranteed ±½ LSB Linearity and 13-μsec or Faster Conversion Time?

Many manufacturers make devices that meet these specifications including Analog Devices, Burr-Brown, Datel-Intersil, Data Device Corp., Harris, Hybrid Systems, Micro Networks, and Teledyne Philbrick.

The Master Selection Guide for Interface makes it possible for an engineer to find every device that meets the above specifications, regardless of who makes it, in seconds.

The Interface section is organized by product classification; an engineer can turn immediately to the category of interest such as analog switches with drivers, multiplexers, a/d converters with binary output a/d converters with decimal output, d/a converters, display drivers, error checking circuits, keyboard encoder-decoders, line drivers, line transceivers, memory and peripheral drivers, sense amplifiers, etc.

To find every 12-bit analog-to-digital converter with guaranteed ±½ LSB linearity and 13-μsec or faster conversion time, all an engineer has to do is turn directly to the analog-to-digital converter section of the Interface Master Selection Guide.

In this section, devices are organized by key parameters. Under resolution, the engineer finds 12-bit; next he looks under linearity error for ±½ LSB and then he looks under conversion time for devices with 13-μsec or faster specifications.

Ways to Use IC Master

What application notes are available on emulating logic functions with PROMs?

IC MASTER provides the most complete listing of application notes available in print. It is easy to find the right application notes by looking in IC MASTER because the application note directory is organized by function.

There are two ways to look up an application note. An engineer can turn to the index page and find the appropriate function or category such as instrumentation amplifiers, multiplexers, or PROMs.

If he knows the device number, he can look it up in the part number index at the front of IC MASTER and see all of the application notes concerning that device. For example, under 8275, a programmable CRT controller listed in the part number index, the reader is referred to the listing for an Intel application note entitled "CRT Terminal Design Using the 8275 and 8279."

To find an application note concerning the use of PROMs to emulate logic functions, the engineer can turn to the application note section on PROMs and see what notes can be of help.

Each listing in the application note directory provides a detailed descriptive passage for the note, gives its length and identifies the manufacturer who publishes it.

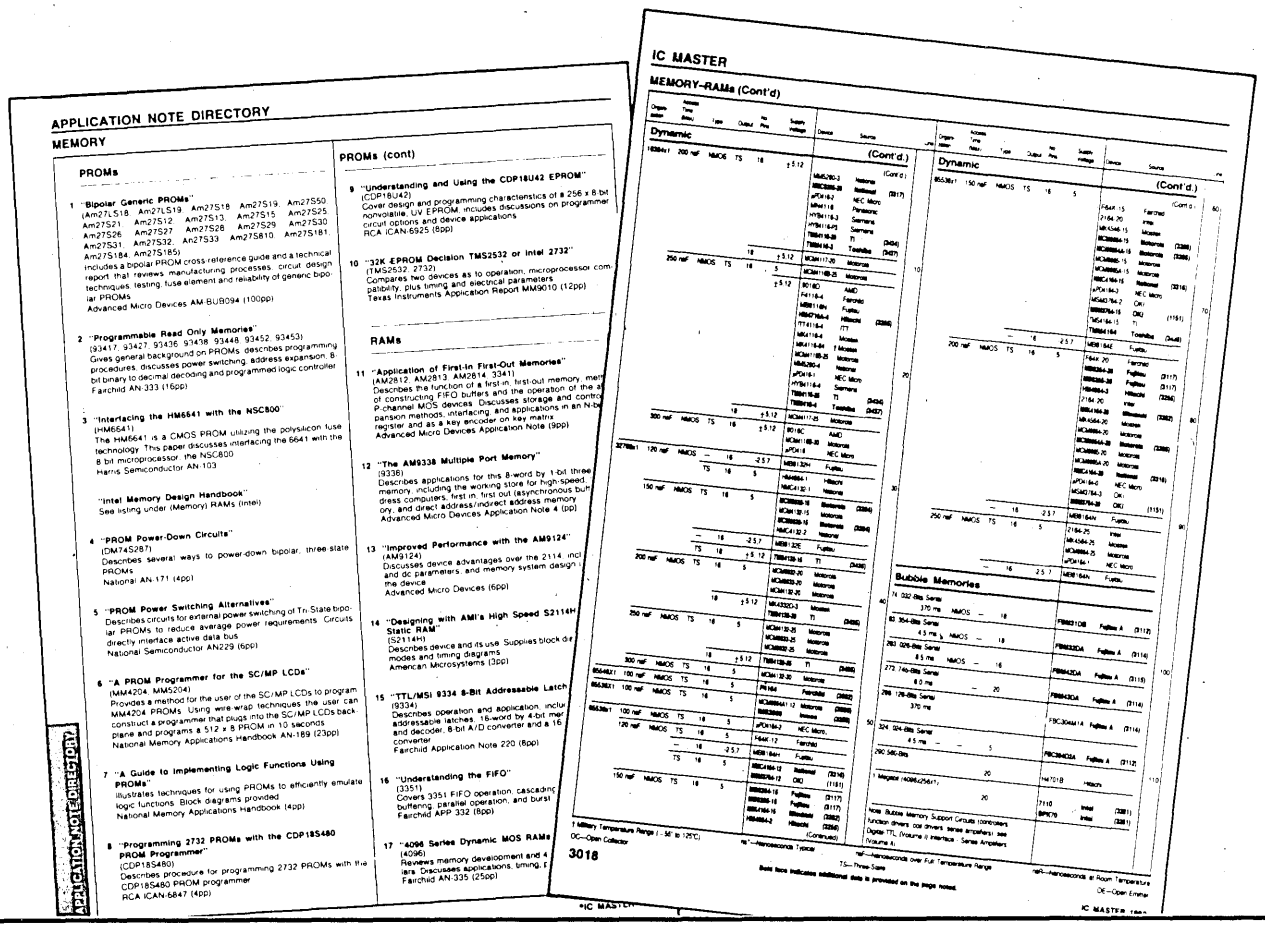
Who makes a 64K dynamic RAM with an access time of 120 ns or faster?

The Memory Section in IC MASTER has a Master Selection Guide which provides initial selection information and data on PROMs, RAMs, ROMs and other types of memories. Each device is characterized by organization (words and bit/word) and access time.

For example, if an engineer was looking for a 64K dynamic RAM, his first step would be to determine organization (words and bit/word). Next, he would locate the desired access time.

When devices are available made by various processes such as NMOS, CMOS, ECL, TTL, etc., the engineer can choose the device that best suits his needs. For further definition, output type, supply voltage and number of pins are listed along with the manufacturer's part number and name.

The engineer's next step in his memory selection process would be to study the applicable data for 64K dynamic RAMs provided by IC manufacturers and pick the most appropriate device. Literally hundreds of pages of engineering data on memories appear in IC MASTER.



Ways to Use IC Master

I need to choose between a full custom or a semi-custom/gate array solution to my design problem.

To help designers weigh custom solutions against semi-custom/gate array approaches, IC MASTER provides a Master Selection Guide on Custom/Semi-Custom and a special section entitled "Options for Going Custom." In this section, the advantages and disadvantages of various custom/semi-custom techniques are covered.

The capabilities of IC manufacturers are tabulated for easy comparison; additional information such as available design aids and testing services is also provided.

My application requires microcomputer boards. How do I start?

Single and multiple board microcomputers are arranged by manufacturer. Under each manufacturer, boards are grouped in sequence according to data word size and, within that grouping, according to the microprocessor on which they are based. Hardware and software support are listed for each board.

A supplementary selection guide is included for microcomputer support boards. The boards are grouped according to supported computer systems.

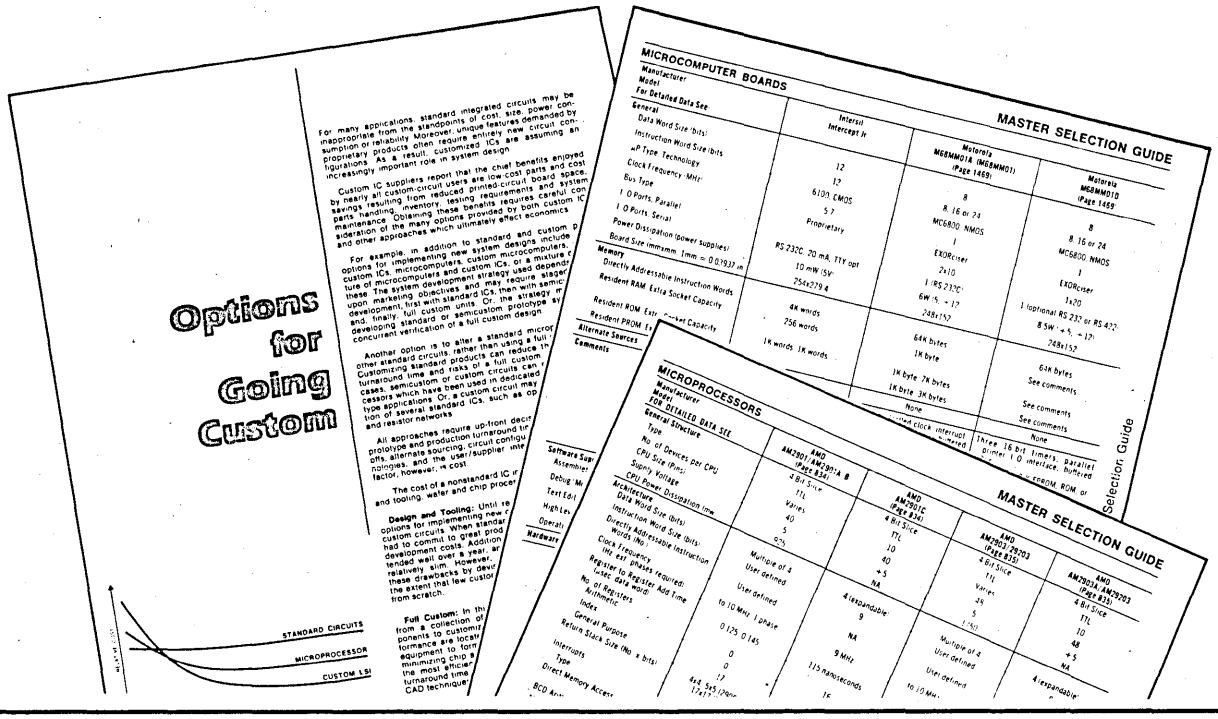
With so many mircoprocessors available, where do I begin?

Simply turn to the Master Selection Guide for Microprocessors. There you will find a listing of all microprocessors currently available and key parameters allowing you to narrow down your selection to a range of products that will meet your major requirements.

Once the microprocessor that best fits the application has been chosen, the next step is to go to the "system components" section. Here all of the available peripheral devices that work with each microprocessor are arranged by function. Thus, if the microprocessor that has been selected is the 8048, system components specifically developed for use with the 8048 are listed, organized by function.

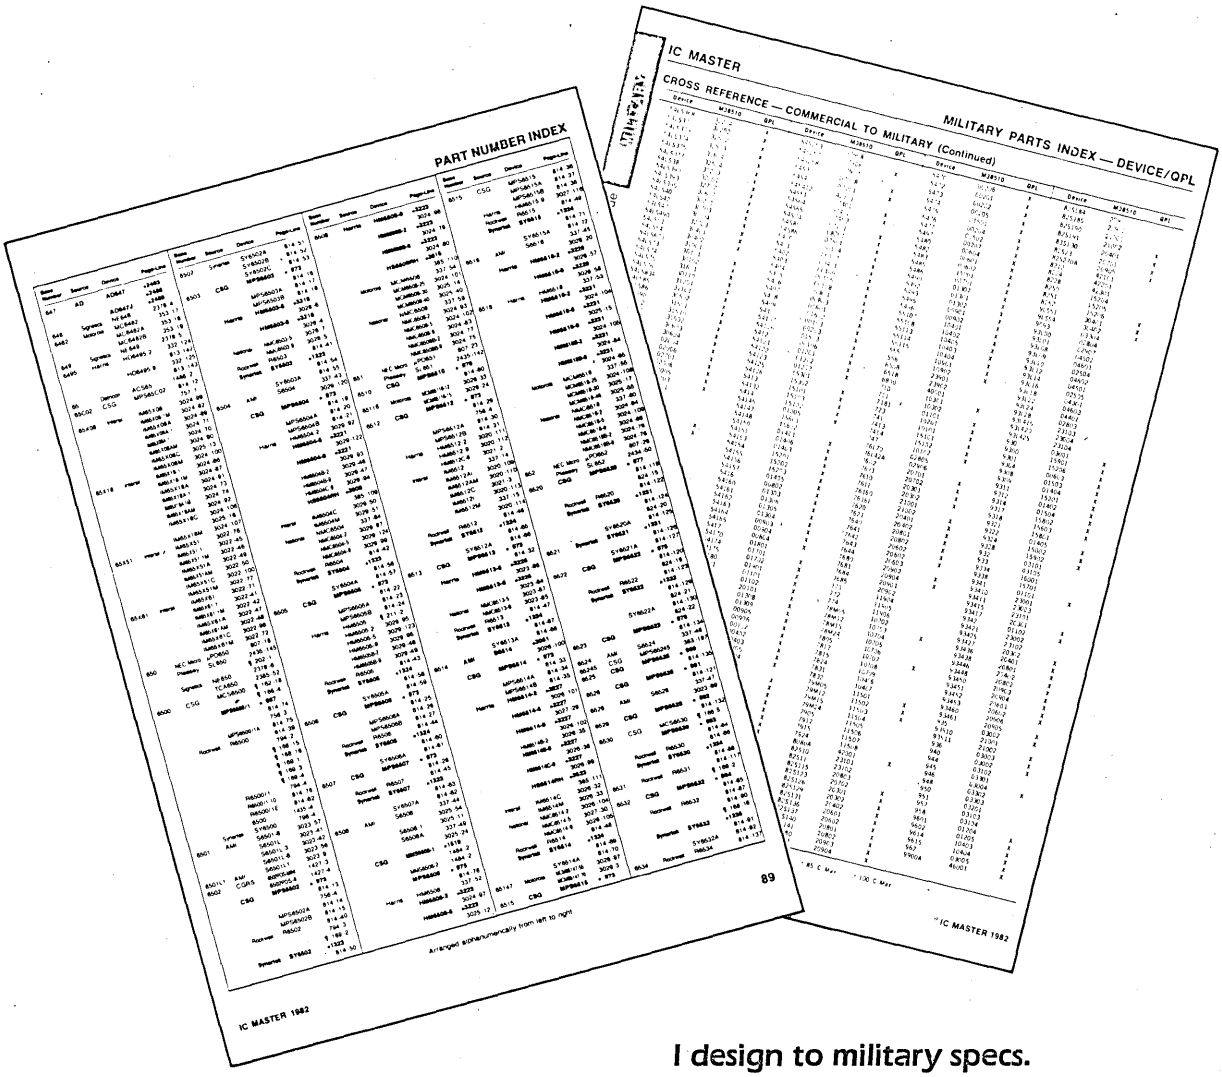
A "general purpose" section follows the "system components" section and describes devices that can be used with more than one microprocessor family.

Finally, hundreds of pages of the latest microprocessor data sheets, provided by IC manufacturers, are presented, arranged in alphabetical order by manufacturer. Each data sheet is easily found thanks to boldfaced page-number references in the Master Selection Guide.



© IC MASTER 1983

Ways to Use IC Master



If an engineer knows that the basic part number is 6508, where does he look first?

The place to look is the part number index. Here, all of the prefixes and suffixes have been stripped away to leave only the basic number. This makes it possible to see the manufacturer of every part with the same base number at a glance. Parts with the same base number, it should be kept in mind, are not necessarily identical; in fact, one could be a memory while another might be a linear device. (To find replacements, one should look in the alternate source directory, not in the part number index.)

Under 6508, the engineer would see a number of devices listed and the page and line numbers where data is given for each of the devices. If an application note concerning any of the devices is available, the location of its listing is also shown.

I design to military specs. Where can I find the latest QPL devices?

The IC MASTER includes a comprehensive military parts directory. Within this directory, tables and charts are provided to answer virtually every information need of the engineer involved in military or high-reliability equipment design.

All integrated circuits with JAN qualification are listed in IC MASTER. A cross reference table, relating device numbers to mil spec numbers, is arranged according to device number. A second table, arranged by M-38510 number, makes it possible to look up the part number when the mil spec number is known.

In addition, ICs are also organized by product section and function, which allows the user to find the proper IC without having to know either the commercial or the military part number.

This section of IC MASTER also includes a table showing the capability of manufacturers to perform MIL-STD-883 screening and high-reliability testing.

MASTER SELECTION GUIDE INDEX

(Guide to Product Categories)

When you know the desired function and need specific devices that perform this function, use this index first. Alphabetically, look up the function in which you are interested. For information on appropriate devices that provide this function, you will be directed to one of the following Master Selection Guides:

Master Selection Guide	Starts on Page No.
Digital	444
Microprocessor	1042
Microprocessor Development Systems	1606
Microcomputer Boards	1748
Microcomputer Support Boards	1900
Interface	2410
Linear	2882
Memory	3448
PROM Programmers	4000
Custom/Semicustom	4108

HOW TO USE THE MASTER SELECTION GUIDES

These guides provide sufficient information to help the engineer make an initial product selection, or to lead him to a group of device numbers and their manufacturers. They make it possible to find the products most likely to satisfy the needs of a particular application. All devices that appear in a selection guide are included in the Part Number Index. If the part number for a device is known by the reader, by referring to the Part Number Index, he can see the page and line number for data on that device. If the manufacturer of the device has included a data sheet in IC MASTER with supplementary data, the location of this data sheet is also listed.

All integrated circuits which are intended for consumer applications (such as calculator chips, TV game chips, and organ frequency dividers) are combined under one heading for the reader's convenience; **Linear**—Consumer Circuits. The TTL major families, TTL, TTL-LS, TTL-H, and TTL-s, have been combined to facilitate function comparisons. The **Microprocessor** section includes, in addition to system selection charts, microprocessor system components grouped under the microprocessor type for which they are suited. The **Microcomputer Board** section groups boards alphabetically by manufacturer, and then in sequence according to data word size and the microprocessor on which they are based.

The **Microprocessor (MPU) Development Systems** and **PROM Programmers** are ordered alphabetically by manufacturer, and then described by specific performance parameters.

Function	Section
Central Processing Unit	Microprocessor—System Components; F8, MicroNOVA, M380, PACE, PPS-4 SBPO400, TLCS-12, Z80, 1600, 1800, 3000, 4000, 6100, 6500, 6800, 8008, 8080, 8085A, 9440, 14500
Character Generators	Memory—Character Generators
Chronographs/ Watches	Linear—Consumer Circuits
Citizens Band Radio Circuits	*See CB Circuits*
Click Suppressor	Linear—Telecommunication Circuits
Clock	Digital—CMOS, Oscillators/Dividers Linear—Consumer Circuits
Clock Buffer	Interface—Memory and Peripheral Drivers Microprocessor—System Components; 6800
Clock Driver	*See Drivers*
Clock Generator	Microprocessor—System Components; PPS-4, 2900, 4004, 8000, 8080
Clock Generator/ Driver	Digital—TTL, Miscellaneous
Codec	Linear—Telecommunication Circuits
Code Converters	Memory—Code Converters
Code Identification System (Manchester)	Digital—CMOS, Miscellaneous
Coin Box Circuits	Linear—Telecommunication Circuits
Compander	Linear—Telecommunication Circuits
Comparators, Digital	Digital—CMOS, Arithmetic Functions Digital—ECL 10000, Arithmetic Functions Digital—ECL III, Arithmetic Functions Digital—HNIL/HTL, Arithmetic Functions Digital—TTL, Arithmeic Functions
Comparators, Linear	Linear—Comparators, Single Comparators Linear—Comparators, Dual Comparators Linear—Comparators, Quad Comparators Linear—Phase Locked Loop Circuits
Comparator, Voltage (Analog Input-Digital Output)	Digital—TTL, Miscellaneous
Complementary Output Elements	Digital—TTL, Miscellaneous
Complementer	*See Nines Complementer*
Compressor (Compander)	Linear—Telecommunication Circuits
Constant Current Source	Linear—Other Devices
Contact Bounce Eliminator	Digital—CMOS, Miscellaneous Digital—TTL, Miscellaneous
Control Element	Microprocessor—System Components; 4004
Control ROM	Microprocessor—System Components; IMP, 5781
Control Store Sequencer	Microprocessor—System Components; 2900, General Purpose
Converters Analog to Digital	Interface—Analog to Digital Converters, Binary Output Interface—Analog to Digital Converters, Decimal Output Linear—Other Devices
BCD to Binary	Digital—TTL, Miscellaneous
BCD to Binary/ Binary to BCD	Digital—TTL, Miscellaneous
Binary to Phone Pulse	Digital—CMOS, Miscellaneous
Digital to Analog	Interface—Digital to Analog Converters
Frequency to Voltage	Linear—Other Devices
Logic Level	Digital—CMOS, Buffers/Inverters
Serial to Parallel	Digital—Special
Voltage to Frequency	Linear—Other Devices
Correlation	Digital—Special Linear—Other Devices
Counter	Digital—CMOS, Counters, Miscellaneous Digital—ECL III, Counters Digital—HNIL/HTL, Counters Digital—TTL, Counters, Miscellaneous Digital—Special
Binary	Digital—CMOS, Counters, Binary Digital—ECL 10000, Counters, Binary Digital—ECL 95000, Counters Digital—ECL III, Counters Digital—HNIL/HTL, Counters Digital—TTL, Binary Counters Up Digital—TTL, Binary Counters Up/Down Digital—Special
Decade	Digital—CMOS, Counters, Decade Digital—ECL 10000, Counters, Decade Digital—ECL 95000, Counters Digital—ECL III, Counters Digital—HNIL/HTL, Counters Digital—TTL, Decade Counters Up Digital—TTL, Decade Counters Up/Down Digital—TTL, Miscellaneous Digital—Special
Counter Logic Control	Linear—Phase Locked Loop Circuits
Counter Time Base	Digital—Special Microprocessor—System Components; Z80
Count Extender	Linear—Phase Locked Loop Circuits
Counting Register	Digital—ECL 100K, Counters
CPU	*See Central Processing Unit*
CRC Generator/ Checker	Interface—Error Checking Circuits Microprocessor—System Components; Macrologic Bipolar
CROM	*See Control ROM*
Crosspoint Array	Linear—Telecommunications Circuits
Crosspoint Switches	Interface—Analog Switches, Multiplexers
CRT Controller	Microprocessor—System Components; 6500, 6800, 8000, 8048, 8080, 8085, 9900, Peripheral Controllers
CRT Video Timer Controller	Microprocessor—System Components; General Purpose
Crystal Oscillator	*See Oscillators*
Current Booster/ Amplifier	Linear—Amplifiers, Special Purpose
Current Sensing Interface Gate	Digital—TTL, Miscellaneous
Custom Arrays	*See Custom/Semicustom Section*
Custom Circuits	*Custom Section*

PART NUMBER INDEX

This index shows the page and line on that page where each device appears in the Master Selection Guide. The list is prepared by a computer from the data in these sections so that every device in them is listed. The devices are arranged in order by basic numbers so that similarly numbered devices from different manufacturers are grouped together. Basic numbers for microcomputer boards and microprocessor development systems are also included. BOLD FACED listings lead to manufacturers' supplied data sheets. Use this index to locate key operational characteristics, application notes, and devices data whenever you have a model number. This is an index of all parts with identical basic part numbers, regardless of their function. It is not an Alternate Source Directory.

HOW TO USE THE PART NUMBER INDEX

This Part Number Index is arranged in alpha-numeric sequence, ignoring the manufacturers' prefixes and suffixes and using the basic model numbers. This basic number sequence is sorted by reading the digits from **left** to **right,** assuming that letters come before numbers. (As an example, these numbers would appear in the following order: 5301, 531, 54H01, 54139, 5414.) Under each basic number, manufacturers' names and full model numbers are listed. The page references in **BOLD FACE** lead to manufacturers' data and application notes. Short editorial descriptions of all Active Applications Notes available from every manufacturer are indicated by a ¶ sign.

The arrangement of this index by base number gives you several advantages. It allows you to find a device by its basic number whether or not you know the name of the manufacturer or the manufacturer's prefixes. Also it groups similar devices together so that when you are looking for data you can quickly determine if the data has been provided in the book by any of the manufacturers and where that data is. Similarly it groups any references to application notes close together so that you do not need to guess which manufacturer might publish application notes on a device before you can locate them.

Once you become familiar with the alpha-numeric numbering sequence, you'll find that this index is easy to use.

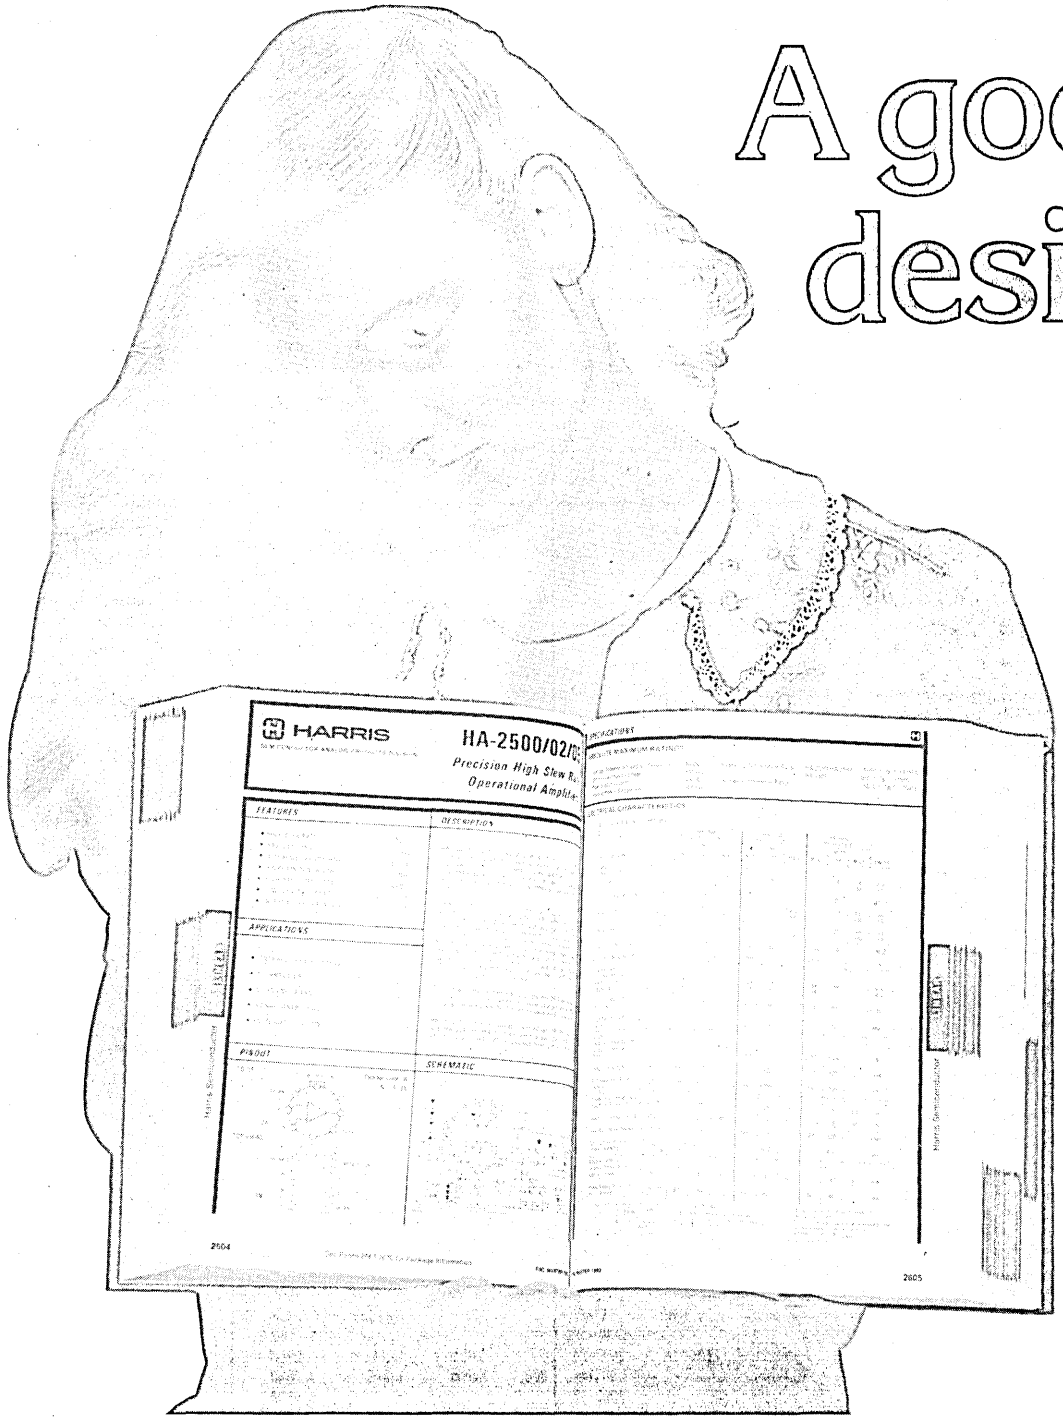
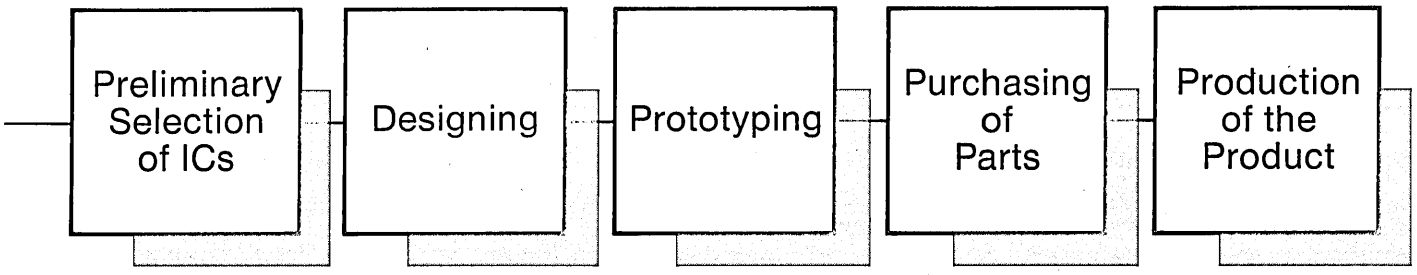
SIX KEY PHASES OF NEW SYSTEM DEVELOPMENT

Planning

A good design





is "mastered" early.

When is the best time for an engineer to pick the integrated circuits that will go into his next design?

The best time is at an early stage in the design process when the engineer's plans are still flexible enough to take full advantage of the features selected.

There is a point in the early phases of every design when engineers focus on selecting integrated circuits. Specifications are examined, relative strengths and weaknesses of various devices are weighed, and the field of candidates is chosen. This is the critical time in the design cycle when designers want to be sure the right devices are in serious contention for their applications.

It is at this moment that the engineer reaches into his technical reference library. Of the material on his shelves, **IC MASTER** is the only reference source that has been especially prepared for this moment.

The engineer can look up each precise function that he needs and see all of the devices and their manufacturers that might satisfy his requirements. He sees this information for all manufacturers, not just for advertisers. But if an IC maker has chosen to include technical data for his products in **IC MASTER,** the engineer sees each index listing for that manufacturer in **bold face type** accompanied by the **page number** on which the data appears; the engineer can then turn immediately to the advertiser's technical data and see if the device fits his needs.

Next time, begin with the MASTER.

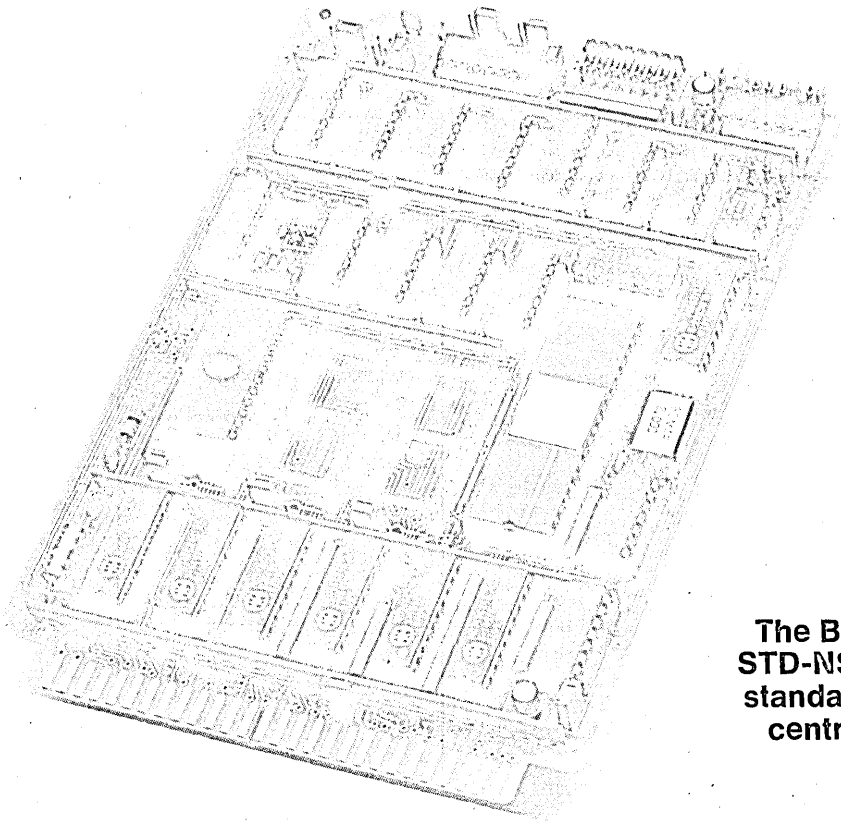
For Key Data On Every IC On This Board, The Place To Look Is...



The Blue Chip Computer STD-NSC800 is a CMOS standard bus compatible central processor card.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

Device No.	Description
NMC27C16	Erasable CMOS PROM
NSC800	8-bit Microprocessor
74SC245	3-State Octal Bus Driver
MD74SC373	Noninverted D-Type Transparent Latch
ICL8212C	Micropower Voltage Detector
MM74PC00	Quad 2-Input NAND Gate
MM74PC32	Quad 2-Input OR Gate
MM74PC08	Quad 2-Input AND Gate
MD74SC139	Octal Decoder/Demultiplexer
MM74PC74	Dual Type-D Flip-Flop
MSC74PC07	Hex Inverter
MM74C30	8-Input NAND Gate

Representative list of ICs on the Blue Chip Computer STD-NSC800 card. Key specifications for all of these ICs can be found in IC MASTER.

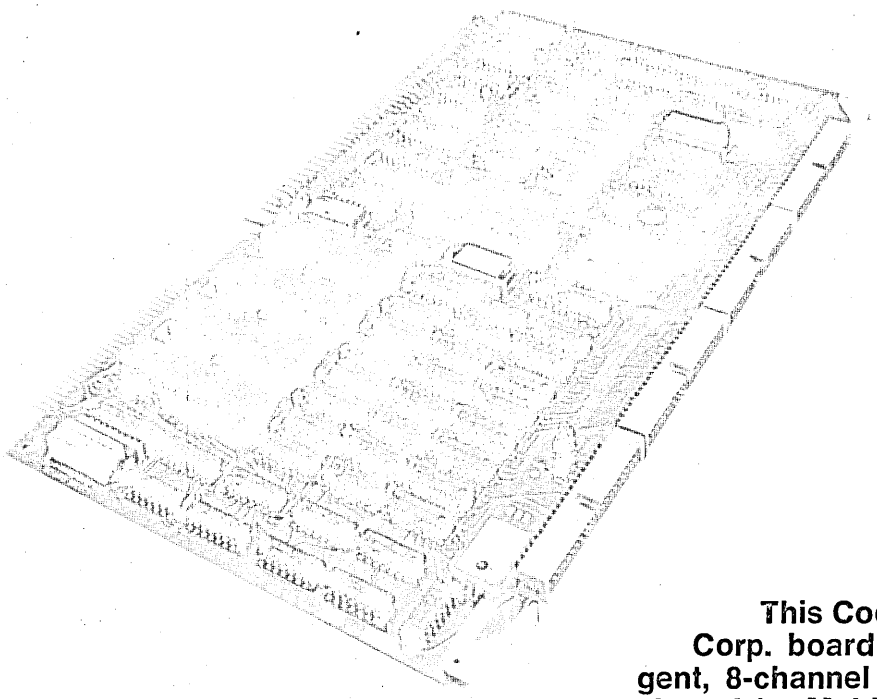
For Key Data On Every IC On This Board, The Place To Look Is...



This Codata Systems Corp. board is an intelligent, 8-channel serial input/output board for Multibus systems.

Equipment and system design often require the use of a wide variety of integrated circuits in order to obtain optimum performance. One way for an engineer to be certain that he hasn't overlooked the best device for his application is to refer to the pages of IC MASTER.

Surveys conducted by IC MASTER, integrated circuit manufacturers, and independent research agencies confirm that four out of five IC MASTER users have specified one or more products as the result of using IC MASTER.

Device No.	Description
AM25LS2521	8-Bit, Equal-to Comparator
AM26LS29	Line Driver, Single-Ended
AM26LS32	Line Receiver, Differential
74LS02	Quad 2-Input NOR Gate
74LS08	Quad 2-Input AND Gate
74LS32	Quad 2-Input OR Gate
74LS74	Dual D-Type Positive Edge Triggered Flip-Flop with Preset and Clear
74LS138	3 Line to 8 Line Decoder/Demultiplexer
74LS164	8-Bit Gated Serial-In, Parallel-Out Shift Register
74LS244	Octal Bus Driver (Schmitt trigger) Non-Inverting, 3-State, Complementary Control
74LS273	Octal D-Type Edge-Triggered Flip-Flop
MBM2716	Fujitsu 248 by 8 PROM
SN74LS04	Hex Inverter
SN74LS133	13-Input NAND Gate
SN74S240	Octal Buffer/Line Driver/Line Receiver Inverted 3-State Outputs
Z80A	Zilog 8-Bit Microprocessor
Z8530	Zilog Serial Communications Controller

Representative list of ICs on Codata Systems Corp. board for data communications equipment.

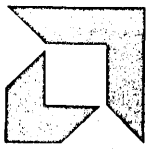
PART NUMBER GUIDE

Each IC manufacturer has his own special method of identifying products, usually through a system of logos, device number prefixes and suffixes. This Part Number Guide is arranged alphabetically by manufacturer and describes each company's part number system. JAN nomenclature is also covered.

Manufacturer	Part Number: Prefix	Part Number: Suffix	Example

ADVANCED MICRO DEVICES



Note: Alternate source devices follow original manufacturer's part number and marking system.

Prefix

Functional Group
- **25** MSI
- **26** Computer Interface
- **27** Bipolar Memory
- **28** MOS
- **29** Bipolar Microprocessor
- **90** MOS
- **91** MOS
- **92** MOS
- **94** MOS
- **95** MOS
- **79** Telecommunications

Type
- **L** Low Power
- **S** Schottky
- **LS** Low Power Schottky
- **(Blank)** Standard

Suffix

Package
- **D** Hermetic DIP
- **P** Molded
- **F** Flat
- **X** Dice
- **L** Leadless chip-carrier

Temperature Range
- **C** Commercial
- **M** Military

Example

Prefix	Device	Suffix
AM25	S 05	D M

Functional Group — Type — Device Number — Package — Temperature Range

AMERICAN MICROSYSTEMS

A Subsidiary of Gould Inc.

(Current)

(Discontinued)

(Note: see pages B.18 — B.28 of AMI's 1982 MOS PRODUCTS CATALOG)

Prefix

Family
- **S** Standard

Suffix

Package Type
- **P** Plastic

INTEL

Description
- M Indicates Military Operating Temperature Range
- I Indicates Industrial Grade
- J Indicates a JAN qualified device, but is for internal identification purposes only. All JAN devices must be ordered by M38510 part number (Example: M38510/42001 BQB), and will be marked in accordance with MIL-M-38510 specifications.

Package Type
- B Hermetic Package, Type B
- C Hermetic Package, Type C
- D Hermetic Package, Type D
- I Crystal Package
- M Metal Can Package
- P Plastic Package
- X Unpackaged Device

Examples:

D2147H1	High Speed 4096x1-Bit Static RAM (35ns, 180/30mA)
C8080A2	8080A Microprocessor with 1.5 s cycle time, hermetic package Type C, commercial temperature range
MD8080A/B	8080A Microprocessor, hermetic package Type D, military temperature range. MIL-STD-883 Level B processing*

* On military devices, B suffix indicates MIL-STD-883 Level B processing.

JAN NOMENCLATURE

Prefix
- **J** / **JAN** Qualified Device
- **M38510** Military Designation

Device
The "Slash" numbering signifies the specification and specifies the device type. See Military Parts Directory.
Note: The J or JAN prefix is very important. If it is not there it is not a JAN device.

Device Class
- **A** Missiles and Manned Spacecraft
- **B** General Military
- **C** Less Critical Military Applications

Case Outline
- **A** ¼″ x ¼″ Flat Pack, 14-Pin
- **B** ⅛″ x ¼″ Flat Pack, 14-pin
- **C** ¼″ x ¾″ Dual-In-Line, 14-Pin
- **D** ¼″ x ⅜″ Flat Pack, 14-Pin
- **E** ¼″ x ¾″ Dual-In-Line, 16-Pin
- **F** ¼″ x ⅜″ Flat Pack, 16-Pin
- **G** 8-Lead Can
- **H** ¼″ x ¼″ Flat Pack, 10-Lead
- **I** 10-Lead Can
- **J** ½″ x 1¼″ Dual-In-Line, 24-Pin
- **K** ⅜″ x ½″ Flat Pack, 24-Pin
- **L** ⅜″ x ½″ Flat Pack, 24-Pin
- **Z** ¼″ x ⅜″ Flat Pack, 24-Pin

Lead Finish
- **A** Kovar or Alloy 42, with Hot Solder Dip
- **B** Kovar or Alloy 42, with Bright Acid Tin Plate
- **C** Kovar or Alloy 42, with Gold Plate

Prefix	Device	Suffix
JM38510	/XXXXX	B C B

Description
- **MC** Packaged Integrated Circuits
- **MCC** Unencapsulated Integrated Circuit Chips
- **MCCF** Flip-Chip Linear Integrated Circuits
- **MCM** Integrated Circuit Memories
- **LM** Pin-for-Pin Equivalent to Linear Integrated Circuits Made by National Semiconductor
- **MMS** Memory Systems

Package
- **F** Flat Ceramic Package
- **G** Metal Can Package (TO-5 Types)
- **K** Metal Power Package (TO-3 Types)
- **L** Ceramic Dual-In-Line Case
- **P** Plastic Package
- **PQ** ICs Packaged In Staggered-Lead Plastic DIP Packages
- **R** Metal Power Packages (TO-66 Types)
- **T** Plastic Package (TO-220 Type)
- **U** Ceramic Package

SOIC package (small outline IC package), Dual-In-Line plastic in 8, 14 and 16 leads
SOT package (small outline, transistor package), such as SOT 23, etc.
Leadless Ceramic Chip Carriers
Leaded Plastic Chip Carriers (to be introduced in 1st Qtr. of '82)
Now (new): A ceramic package with a lead count, up to 68 leads or more for direct socketing with boards

- N — Package Type
- /A+ — Reliability Program (Optional)

Temperature Ranges

Linear Devices

With proprietary linear circuits, a 1-2-3 numbering system is employed. The 1 denotes a Military temperature range device (−55°C to 125°C), the 2 denotes an Industrial device (−25°C to 85°C), and the 3 denotes a Commercial device (0°C to 70°C). i.e. LM101/LM201/LM301. Exception to this are the LM1800 Series; some hybrid circuits which employ a "C" Suffix; and second-source products which follow the original manufacturer's numbering system.

Digital Devices

CDXXXX-CMOS —
C Suffix −40°C to 85°C,
M Suffix −55°C to 125°C.

DM54XX — All numbers beginning with 5 denote −55°C to 125°C temperature operation.

DM74XX — If the "74" is indicated, the operating temperature is 0°C to 70°C.

DM7XXX — All other numbers beginning with 7 (besides the "74" shown above) are NSC proprietary products and a 7 here indicates −55°C to 125°C.

DM8XXX — All numbers beginning with 8 denote 0°C to 70°C temperature operation.

- **G** 20, 28, 44-Lead Square Leadless
- **H** 4, 8, 10-Lead TO-5 can
- **I** 8, 10, 14, 16, 18, 24, 28, 40, 50-Lead DIL CERAMIC
- **K** 2-Lead TO-3 can
- **N** 8, 14, 16, 18, 20, 22, 24, 28, 40-Lead DIL PLASTIC
- **N14** 14-Lead DIL Plastic for those products available in both 8 and 14-Lead packages, the 14-Lead package will be identified with N14
- **Q** 10, 14, 16, 24-Lead CERAMIC Flat
- **R** 16, 18, 24, 28, 40-Lead CERAMIC-Beryllia-Flat
- **SK** Microprocessor Kits
- **TA** 8-Lead TO-5 can
- **U** 9-, 13-Lead Single-in-Line
- **Y** 24-Pin Ceramic Square Flat-pack with Radial Leads
- **W** 10, 14, 16, 24-Lead CERPAC

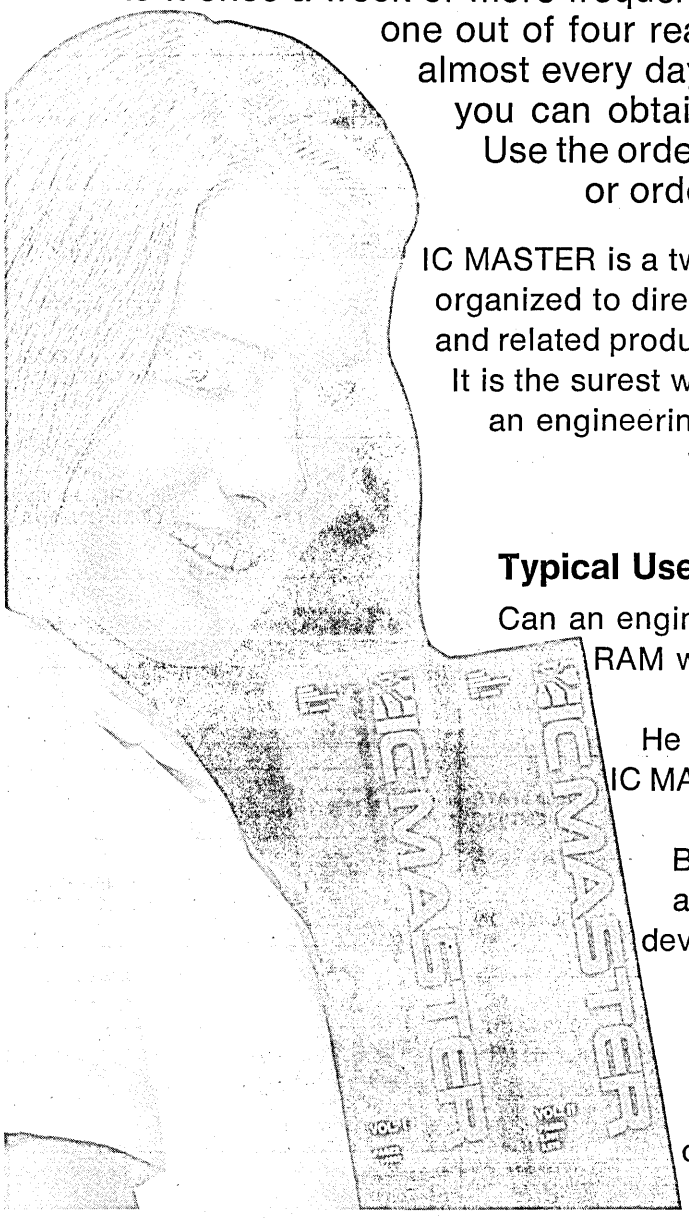
IC MASTER BELONGS ON YOUR BOOKSHELF; ORDER YOUR COPY NOW

A recent survey revealed that one out of two IC MASTER users refer to it once a week or more frequently. The survey also discovered that one out of four readers use IC MASTER every day or almost every day. If you use IC MASTER frequently, you can obtain your own copy by ordering now. Use the order cards contained in this publication, or order by telephone as described below.



IC MASTER is a two-volume set of technical data carefully organized to direct the engineer to the integrated circuits and related products that are closest to his specific needs. It is the surest way to find the optimum device to answer an engineering design requirement. By ordering now, you won't have to borrow or search for IC MASTER the next time you need it.

Typical Use of IC MASTER

Can an engineer find out who makes a 64K dynamic RAM with an access time of 120 nanoseconds or faster in less than 30 seconds? He can if he turns to the Memory section of IC MASTER and looks for the 64K organization (words and bits per word) that he needs. Because each device is listed in order of access time, he can easily determine the devices that satisfy his speed requirements.

In the United States only:

You can order IC MASTER simply by charging it to your VISA or Master Card credit card. To place your order, call now: (516) 222-2500. Ask for Extension 314.

APPLICATION NOTE DIRECTORY

The Application Note Directory is a comprehensive guide to the many IC and Microcomputer Board application notes available. It lists the devices covered, describes each note, and tells who publishes each one.

HOW TO USE THE APPLICATION NOTE DIRECTORY

The application notes in this directory can be located by function or device number.

1. To find out what is published by function, locate the closest topics in the index at right, turn to the pages indicated, and scan through the listings.

2. To find all the application notes covering a given device, look up the device in the Part Number Index at the front of this book. The ¶ sign leads to application notes.

The application note descriptions are organized under the headings: Digital, Microprocessor, Microcomputer Boards, Interface, Linear and Memory. Beneath those headings are functional and applications categories arranged alphabetically. Within each category the notes are arranged in alphabetical sequence by title. The mixing of functions and applications is necessary, since application notes do not lend themselves to classification entirely by function or entirely by application. When an application note fits under several categories, it is listed in one and cross referenced by the others. This may mean that you have to spend five minutes checking a number of categories to be sure you've found everything you want, but finding suitable information can save you considerable design time. If an application note covers specific devices or it shows in some detail how certain devices are used, these device numbers are listed in parentheses just below the title.

The application note descriptions are as short as possible. They are designed to save you time in reading while giving an overall sense of the contents. The length of each note is indicated in parentheses on the last line; if the note is bound into a book, the last line will show that it is part of a handbook, databook, catalog, etc.

Once you have determined which application notes you need, check to see if the manufacturer has placed the complete application note in the back of this section (immediately following the short descriptions). If not, contact the manufacturer's sales office or write to the manufacturer. Be sure to give both the title and the application note number. Addresses and phone numbers are listed in the Manufacturers and Distributors Directory.

Arithmetic

1 **"A Four-Cycle Butterfly Arithmetic Architecture"**
Explains the background of the FFT and the computational element called the butterfly. A block diagram of the FFT processor is presented and the DAU (data arithmetic unit) architecture is described in detail. The text's description of the four FFT instructions are supplemented by computational diagram, block diagrams, a data flow chart and a timing diagram.
TRW/LSI A-10

2 **"AM25S10 Four-Bit Shifter"**
(AM25S10)
Provides functional description and discusses logic equivalents. Applications: up-shift, down and around end shifts, scaling and fixed multiplication.
Advanced Micro Devices (10pp)

3 **"Applications of the TTL/MSI 93S43 4-Bit by 2-Bit Two's Complement Multiplier"**
(93S43)
How to implement a combinatorial multiplication array of any size for two's complement numbers. How to multiply in other number representations. Speed/hardware tradeoffs, normalization of floating point numbers after multiplying, rounding or truncation of double length products.
Fairchild AN-329 (15pp)

4 **"Arithmetic Arrays Using Standard COS/MOS Building Blocks"**
(CD4001, CD4008, CD4011, CD4013, CD4019)
Describes design of a 32-bit full adder/arithmetic logic system. Discusses four-bit full adder, quad AND-OR select gate, dual D-type flip-flop, input NAND gates, input NOR gates, and arithmetic register.
RCA ICAN-6600 (6pp)

5 **"COS/MOS Rate Multipliers—Versatile Circuits for Synthesizing Digital Functions"**
(CD4089, CD4527)
Describes operation of a rate multiplier, and the effects of cascading. Covers addition, subtraction, multiplication, division, square and higher order roots, frequency ratios and integration. Also discusses symmetric operations.
RCA ICAN-6739 (12pp)

"Fast Multipliers Using TTL Read Only Memories"
See listing under (Memory) ROMs. (Texas Instruments)

6 **"Floating Point Multiplier"**
Explains how to implement a 24-bit floating point multiplier using one MPY-12HJ multiplier and other devices.
TRW/LSI A-6

7 **"High-Speed TTL Adders"**
(DM5483, DM7483)
Describes 16-bit parallel adders, using the DM7283/DM8383, and connections for ripple-carry addition. Also describes BCD adder techniques implemented with these devices. Shows how the devices can be used to improve the performance of MOS storage systems.
National AN-35 (6pp)

Arithmetic (cont)

8 **"LSI Multipliers Application Notes"**
Describes larger and smaller word multiplication, higher speed multiplication and division using multiplication.
TRW/LSI A-1

"MECL 10,000 Arithmetic Elements MC10179, MC10180, MC10181"
See listing under (Digital) High Speed Logic (Motorola).

9 **"Multiplier-Accumulator Application Notes"**
Covers the use of multiplier-accumulators including an explanation of the clock, input and output controls. Other discussions include: larger word accumulations, multiplication plus a constant, operation with microprocessors, digital filters and complex multiplication.
TRW/LSI A-7

10 **"NBCD Sign and Magnitude Adder/Subtracter"**
(MC14560, MC14561)
Describes CMOS parallel adder-subtracters for both signed and unsigned natural binary coded decimal (NBCD) numbers.
Motorola AN-738 (7pp)

11 **"The AM2506—A Latching ALU"**
(AM2506)
Combines four-bit arithmetic logic unit and four-bit latch. Describes application in high-speed multiple word adder, multiple master-slave registers, 16-word arithmetic register, multiplication at 16 MHz rate.
Advanced Micro Devices (4pp)

12 **"Wire-A-Gate with the AM25LS2521 Comparator"**
(AM25LS2521)
Describes device logic and uses of the device for decoding I/O addresses in a microprocessor system. Also covers a combination lock application.
Advanced Micro Devices (8pp)

CMOS

13 **"54C/74C Family Characteristics"**
(MM54C Series, MM74C Series)
Discusses output, noise and temperature characteristics, power consumption, and propagation delay for the 54C/74C logic family.
National CMOS Databook AN-90 (6pp)

"A 3½ Digit DVM Using an Integrated Circuit Dual Ramp System"
See listing under (Linear) Instrumentation (Motorola)

14 **"A COS/MOS PCM Telemetry and Remote Data Acquisition Design"**
(CD4000 Series)
Describes data transmission formats and the following data acquisition sections: analog and digital multiplexers, A/D converters, transmission formatters and system programmers.
RCA ICAN-6289 (12pp)

DIGITAL

CMOS (cont)

"A New CMOS Analog Gate Technology"
See listing under (Interface) Switches. (Intersil)

1 **"A Simplified Approach to Testing CMOS Inverters and Gates"**
Bench tests using a power supply and a V-O-M are described. They include continuity, input leakage, quiescent device current, output voltage, noise immunity, output drive current and threshold voltage.
Solid State Scientific AN-107 (4pp)

2 **"A Typical Data-Gathering & Processing System Using CD4000A-Series COS/MOS Parts"**
(CD4000 Series)
Describes data-gathering and processing system using CMOS circuits. Includes discussion of input signal conditioning and transmission, the digital processor unit, receiver, memory, arithmetic unit, display unit, output buffer, output transmitter, receiver, and control unit.
RCA ICAN-6210 (11pp)

"Application of CD4016A Quad Bilateral Switch"
See "Transmission and Multiplexing of Analog or Digital Signals Using the CD4016A Quad Bilateral Switch" Under (Interface) Data Transmission. (RCA)

3 **"Application of the RCA-CD4093B COS/MOS Schmitt Trigger"**
(CD4093B)
Describes characteristics of the CD4093 quad 2-input Schmitt trigger. Covers applications in waveshaping (sinewave to squarewave, edge delay, edge detection), power-on reset, astable multivibrators and use as a Schmitt trigger for noise immunity.
RCA ICAN-6346 (6pp)

4 **"Applications of CD40107BE COS/MOS Dual Buffer"**
(CD40107BE)
Describes the characteristics of the CD40107BE and the variety of applications including a lamp driver, an LED driver, and a relay driver.
RCA ICAN-6564

5 **"Applications of CMOS Integrated Circuits in Communications Equipment"**
(SCL4000 Series)
Uses of SCL4000 Series circuits as frequency synthesizers, digital frequency displays, frequency scanners, and squelch circuits.
Solid State Scientific AN-108 (4pp)

6 **"Astable and Monostable Oscillators using RCA COS/MOS Digital Integrated Circuits"**
(CD4000 Series)
Describes several techniques used to compensate for the normal threshold variation of MOS devices in the design of stable multivibrator circuits for operation at frequencies up to 1 MHz. Also covers applications for multivibrator circuits including VCOs, voltage controlled pulse-width circuits, and phase-locked VCOs.
RCA ICAN-6267

CMOS (cont)

7 **"Battery-Powered Digital-Display Clock/Timer and Metering Applications Utilizing the RCA CD4026A and CD4033A Decade Counters 7-Segment Output Types"**
(CD4009, CD4010, CD4026, CD4033)
Describes the CD4026A/33A ICs and their use with 7-segment display units. Discusses interface packages and methods to help the designer optimize his system. Includes a discussion of battery-operated systems for digital clocks and watches.
RCA ICAN-6733 (16pp)

8 **"CMOS Analog Multiplexers and Switches; Applications, Considerations"**
Covers selection criteria, parameter definitions, handling and design precautions, typical applications, and other topics concerning CMOS analog multiplexers and switches.
Harris Semiconductor AN-520 (9pp)

9 **"CMOS Databook"**
Primarily contains data sheets, but also includes the following application notes individually described elsewhere: AN-77, 88, 90, 118, 138, 140, 177, 200; DB-5, and MB-18.
National Semiconductor $6

10 **"CMOS Expandable Gates"**
(SCL4402A, SCL4412A)
Compares the transfer characteristics of ordinary CMOS gates to those gates using double buffered output. Includes performance characteristics and discusses expansion of SCL4412A and SCL4402A to 12-input NOR, 16-input OR, and other combinations.
Solid State Scientific AN-102 (3pp)

11 **"CMOS Linear Applications"**
(MM74C00, MM74C02, MM74C04)
Describes use of CMOS devices biased to operate at the midpoint of the transfer characteristics.
National CMOS Databook AN-88 (3pp)

12 **"CMOS Monostable Multivibrators"**
(MC14538B)
Covers theory of operation with emphasis on pulse widths, retriggerable and non-retriggerable operation. Describes use in a tachometer.
Motorola AN-772 (7pp)

13 **"CMOS Oscillators"**
Describes square wave oscillators that can be built with CMOS logic elements.
National CMOS Databook AN-118 (4pp)

14 **"CMOS Wave Shaping and Level Detection"**
Describes methods to obtain modified transfer characteristics of double buffered NAND gates, by connecting inputs together, connecting extra inputs to Vcc, etc. Shows how to obtain variable amounts of hysteresis, and describes systems of level detection using trigger circuits.
Solid State Scientific AN-109 (5pp)

15 **"CMOS, the Ideal Logic Family"**
Talks about the characteristics of CMOS logic. Describes system considerations, interfacing to other logic types, and timing considerations.
National CMOS Databook AN-77 (7pp)

DIGITAL

CMOS (cont)

"CMOS/MOS Interfacing Simplified"
See listing under (Interface) MOS/Bipolar (RCA)

"CMOS/MOS Rate Multipliers—Versatile Circuits for Synthesizing Digital Functions"
See listing under (Digital) Arithmetic (RCA)

1 **"COS/MOS Electrostatic-Discharge Protection Networks"**
(CD4000 Series)
Discussion and illustrations of the various electrostatic-discharge protection networks provided on RCA CMOS parts.
RCA ICAN-6572 (2pp)

2 **"COS/MOS Integrated Circuits Manual"**
(CD4000 Series)
Discusses fabrication, logic system design, and applications of RCA COS/MOS circuits.
RCA CMS-272 $5.00 (168pp)

"Design of Fixed and Programmable Counters Using the RCA 4018A COS/MOS Presettable Divide-by-"N" Counter"
See listing under (Digital) Counters. (RCA)

3 **"Designing with MM74C908, MM74C918 Dual High Voltage CMOS Drivers"**
(MM74C908, MM74C918)
Presents curves for power dissipation design limits. Shows simple driver circuits plus flasher, oscillator, siren and latch applications.
National CMOS Databook AN-177 (12pp)

4 **"Fundamentals of Testing COS/MOS Integrated Circuits"**
Describes the techniques employed in testing CMOS devices to assure their adherence to data sheet specs.
RCA ICAN-6532 (14pp)

5 **"Getting the Most Out of CMOS Devices for Analog Switching Jobs"**
Describes latch-proof junction isolation, floating-body junction isolation, and dielectric isolation as solutions to CMOS problems when applied to analog design.
Harris Semiconductor AN-521 (7pp)

6 **"Guide to Better Handling and Operations of CMOS Integrated Circuits"**
Recommends specific handling and operating practices to minimize the probability of damage in manufacturing and field environments.
RCA ICAN-6525 (5pp)

7 **"Improved CMOS Gate Design"**
(SCL4000 Series)
Description of the output buffering of the SCL4000 Series.
Solid State Scientific AN-105 (3pp)

8 **"Interfacing Analog and Digital Displays with CMOS Integrated Circuits"**
(CD4000 Series)
Details some of the CMOS ICs most suitable for interfacing the electronic circuit and the display. For digital displays, basic display operation is also covered as an aid in selecting the appropriate interfacing device.
RCA ICAN-6595 (12pp)

CMOS (cont)

9 **"Interfacing COS/MOS with Other Logic Families"**
(CD4000A Series)
Describes conditions governing interface of CMOS 4000A series with other logic families.
RCA ICAN-6602 (12pp)

10 **"Interfacing with CMOS"**
Describes the electrical characteristics of CMOS inputs and outputs. Discusses interfacing CMOS with CMOS, PMOS, NMOS, DTL/TTL, HTL, and ECL.
Solid State Scientific AN-104 (5pp)

11 **"Intrinsically Safe Data Acquisition"**
Presents methods by which CMOS circuitry can be used in the construction of intrinsically safe low-level multiplexers, A/Ds, and instrumentation amplifers.
Burr-Brown AN-84 (4pp)

12 **"Introduction to CMOS Integrated Circuits with Three-State Outputs"**
Describes a wide variety of CMOS ICs incorporating transmission gates with standard logic. Gives design rules. Covers applications in analog switching and multiplexing, digital multiplexing, and data bussing.
Motorola AN-715 (19pp)

"MM54C/74C Voltage Translation/Buffering"
See listing under Interface (National)

"NBCD Sign and Magnitude Adder/Subtracter"
See listing under Arithmetic (Motorola)

13 **"Noise Immunity Comparison of CMOS Versus Popular Bipolar Logic Families"**
Compares the noise immunities of TTL, DTL, HTL, and CMOS logic families. Discusses common noise sources, precautions against noise, noise specification, and standard noise tests.
Motorola AN-708A (8pp)

14 **"Noise Immunity of COS/MOS B-Series Integrated Circuits"**
(CD4000UB Series, CD4000B Series)
Evaluates noise immunity of B-Series CMOS devices with respect to noise-energy immunity, and dc/ac noise-immunity. Includes definitions of test terms, discussion of logic-system noise and rejection, and schematics.
RCA ICAN-6587 (9pp)

15 **"Noise Immunity of COS/MOS Integrated-Circuit Logic Gates"**
(CD4000A, CD4001A)
Evaluates noise immunity of the CD4000A/01A gates with respect to external noise, crosstalk, transmission-line reflections, power-line noise, and ground-line noise. Includes schematics and logic diagrams.
RCA ICAN-6176 (8pp)

16 **"Parallel Clocking of Sequential CMOS Devices"**
(CD4000A Series, CD4000B Series)
Shows how to avoid logic-state errors in cascaded CMOS devices by optimizing clock transition time.
RCA ICAN-6948 (2pp)

©IC MASTER

DIGITAL

CMOS (cont)

1 **"Radiation Resistance of the COS/MOS CD4000A and CD4000B Series"**
(CD4000 Series)
Studies permanent and transient radiation as they affect CMOS devices.
RCA ICAN-6563 (3pp)

2 **"Scanning Logic for RF Scanner-Receivers Using CMOS Integrated Circuits"**
Describes rf scanner-receiver control functions using standard CMOS devices. Covers crystal switching and priority channel monitoring with mention of phase-locked loop designs.
Motorola AN-753 (7pp)

3 **"Understanding Buffered and Unbuffered CMOS Characteristics"**
Presents the relative merits of buffered and unbuffered CMOS devices. Provides background, definitions, and an applications chart.
RCA ICAN-6558 (8pp)

4 **"Understanding CMOS"**
Programmed text covers basic theory, construction, and characteristics of COS/MOS digital integrated circuits. Describes RCACOS/MOS circuits, packaging, specifications, and design factors. Programmed instruction format enables a reader to learn at his own pace.
RCA CPI-279 (80pp) $2.00

5 **"Using the CD4047A in COS/MOS Timing Applications"**
(CD4047)
Compares this monostable-astable multivibrator with simpler types of oscillator circuits and discusses applications, including a noise discriminator, low-pass and band-pass filters, a frequency discriminator, and a pulse generator.
RCA ICAN-6230 (13pp)

6 **"Using the CD4520B to Design Dividers with Symmetrical Outputs"**
(CD4520B)
Describes how to use this CMOS counter to divide an input frequency by N where N is any integer from 2 to 256 and obtain outputs with approximately 50% duty cycles.
RCA ICAN-6362 (10pp)

7 **"Using the SCL 4528 Dual Monostable Multivibrator"**
(SCL4528)
Describes operating modes and timing, equations for pulse width calculations.
Solid State Scientific AN-111 (6pp)

Consumer

8 **"Calculator Learns to Keep Time"**
Describes stopwatch and keyboard controlled interval timing functions using the MM5736 calculator chip.
National MOS/LSI Databook AN-119 (8pp)

9 **"Handheld Calculator Battery Systems"**
Describes the tradeoffs in battery performance for 6.5-9.5v calculators driven by 2, 3 and 4 cell as well as 9v. batteries.
National MOS/LSI Databook AN-149 (4pp)

Consumer (cont)

"High Voltage Shift Registers Move Displays"
See listing under (Memory) Shift Registers (National)

10 **"Keyless Lock Circuit"**
(LS7220)
Describes device operation and implementation in a digital lock.
LSI Computer Systems (6pp)

11 **"Timekeeping Advances Through COS/MOS Technology"**
Discusses basic oscillator design considerations, practical oscillator circuits, and some typical timing-circuit applications, including wrist watches, wall clocks, and auto clocks.
RCA ICAN-6086 (12pp)

12 **"Universal Count/Display Circuit"**
(ZN1040AE)
Examines range of applications for a 4-decade up/down counter with BCD and seven-segment outputs. Covers external circuit connections and component values for zero suppression, blanking, decimal-point input, lamp test, and common anode or common cathode LED displays.
Ferranti (23pp)

13 **"Using Standard National Calculators in Industrial and Microprocessor Applications"**
Discusses keybounce and noise rejection, ready signal operation, and zero suppression as they pertain to using calculator circuits in applications.
National MOS/LSI Databook AN-176 (4pp)

Counters

14 **"A 200 MHz Autoranging MECL-McMOS Frequency Counter"**
(MC10000 Series)
Presents basic frequency counter design along with the schematics and diagrams needed to build a 200 MHz autoranging frequency counter.
Motorola AN-742 (11pp)

15 **"A Basic Selection Guide to Digital Counters"**
(CD4017, CD4024, CD4518)
Discusses the advantages of the binary ripple counter and compares it with the Johnson decade counter and the BCD counter. Also covers selection of the most suitable counter for specific applications.
RCA ICAN-6552 (6pp)

"An MSI 500 MHz Frequency Counter Using MECL and MTTL"
See listing under (Digital) High Speed Logic. (Motorola)

16 **"Applications Using the MK50395 Six Decade Counter Display Totalizer"**
(MK50395, MK50396, MK50397)
Discusses use of the counter in batch control position measurement, greater-than less-than detection, automatic stop, frequency counter, darkroom timer, digital tuning, and N-Pulser applications.
Mostek (16pp)

DIGITAL

Counters (cont)

1 **"Battery-Powered 5 MHz Frequency Counter"**
Describes a battery operated 5 MHz counter built with CMOS for low power operation. Discusses methods to minimize power consumption.
Motorola AN-717 (9pp)

2 **"Calculator Chip Makes A Counter"**
(MM5736, MM5739)
Discusses use of the MM5736 calculator chip as a counter operating up to 120 Hz.
National MOS/LSI Databook AN-112 (6pp)

3 **"Design of Fixed and Programmable Counters Using the RCA 4018A COS/MOS Presettable Divide-by-"N" Counter"**
(CD4018)
Describes the use of this device in single-decade and multi-decade fixed and programmable divide-by-"N" counters. System considerations, such as switch simplifications, components minimization, and speed are also discussed.
RCA ICAN-6498 (6pp)

4 **"Five Digit Accumulator/Elapsed Time Indicator"**
(MC14534)
Describes in detail the circuit for a CMOS 5 digit elapsed time indicator and a 99,999 count accumulator with a 1-999 prescaler.
Motorola AN-743 (5pp)

5 **"Keyboard Programmable Divide-by-"N" Counter with Symmetrical Output"**
(MM54C922, MM74C922)
Describes a circuit to divide by 1 through 16 by pushing a single key for each division ratio.
National DB-5 (2pp)

6 **"Single IC Forms 2-to-9-Bit Ring Counter"**
(AM2503)
Describes use of device to make a ring counter.
Advanced Micro Devices (2pp)

7 **"The Logical Design of Shift Counters"**
Presents two techniques to aid in designing shift-register counters. Gives results for "sequence tree" and "count multiplication" techniques for cycle lengths of 30 or less. Shows solutions for both "D" flip-flops and J-K flip-flops as the input elements of the shift register.
Motorola AN-576 (8pp)

8 **"Using the MK5009P MOS Counter Time-Base Circuit"**
(MK5009)
Describes the use of the MK5009 along with complete circuits for a digital frequency meter, pulse generator and digitally-programmable one-shot. Discusses operation of the units oscillator circuit.
Mostek AN-104 (4pp)

Counters (cont)

9 **"Using the SN74160 Family of Synchronous Counters"**
(SN74160, SN74161, SN74162, SN74163)
Describes carry circuit operation, cascading and programming.
Texas Instruments Application Report CA-174 (7pp)

General

"Criteria for Choosing Resins and Evaluation Tests for Discrete and Integrated Power Devices in Plastic Packages"
See listing under (Linear) General (SGS-ATES)

10 **"Custom Bipolar Integrated Circuits for Automotive Applications"**
Provides overview of bipolar ICs for customized systems in automotive and other applications. Reviews a typical custom development cycle and examines tradeoffs with other approaches.
Sprague TP79-2 (8pp)

11 **"Digital Telephone-System Components - CODECs—and the μ and A Laws"**
Defines terminology associated with converting telephone systems from analog to digital operation; discusses design and operation of codecs as governed by μ and A laws.
RCA ICAN-6941 (7pp)

12 **"Don't Be Confused by Switching Time Specifications"**
Uses a TTL J-K flip-flop to explain switching time specifications.
Advanced Micro Devices (4pp)

13 **"Economics of ISL Gate Arrays"**
(8A1200, 8A1260, 8A1542)
Describes manufacturing cost savings achievable by replacing standard 74-series logic with ISL gate arrays.
Signetics

14 **"HMOS Reliability"**
Describes HMOS technology and device operation. Presents failure mechanisms, reliability testing, and test results.
Intel RR-18 (9pp)

15 **"How Cost Effective Are Custom IC's?"**
(MONOCHIP)
Looks at the relative economies of discrete circuit designs versus semicustom IC's at various volume levels. Economic costs often not analyzed such as rework, supervisory overhead, inventory maintenance, quality assurance, and purchasing and stocking costs are included.
Interdesign APN-5 (6pp)

16 **"Logic Design for CMOS and NMOS Monochips"**
(MONOCHIP)
Describes techniques for transforming breadboard logic into MONOCHIP compatible logic using equivalent gates. Uses the 4008 binary adder and 4516 up/down counter as examples.
Interdesign APN-14 (15pp)

DIGITAL

General (cont)

1 **"Low Cost Versatile CRT Terminal Using the SND5027 and SND8002"**
(SND5027, SND8002)
Discusses the design of a CRT terminal using two MOS/LSI devices that minimize parts count in the display circuitry.
SSS AN-303 (10pp)

2 **"MOS 100-Bit Word Generator"**
Describes how to build a 100-bit word generator using MOS ICs.
National MB-1 (2pp)

3 **"MOS Clock Savers"**
Design and use of MOS Clock-Drive Networks. Offers tips for saving power and lowering component costs.
National MB-5 (2pp)

4 **"Nonvolatile Logic Applications"**
(MN9102, MN9105, MN9106, MN9107, MN9108)
Provides theory and application of several MNOS ICs that combine logic and nonvolatile memory functions. Example applications include an elapsed-time indicator, last-program memory and decade counter.
Plessey (40pp)

5 **"Solid-State Devices Manual"**

6 **"Special Functions Databook"**
Primarily contains data sheets, but also includes the following application notes described elsewhere: AN-10, 13, 28, 33, 38, 48, 49, 63, 75, 76, 156, 159, 180, 215, 219, 221; MB-9, LB-2, 14, 17.
National Semiconductor $6

7 **"The SND5027 Video Timer-Controller"**
(SND5027)
Describes a user-programmable LSI device containing the logic for generating timing signals required in presentation and formatting video data on CRT monitors.
SSS AN-301 (19pp)

8 **"Touchcontrol Circuits for Capacitance Switching"**
Describes seven MOS ICs that interface with a capacitive keypad panel to form a nonmechanical switching system. Includes discussion on keyboard scanning, noise immunity, switch size, capacitance values, multiplexing, panel construction and output considerations.
American Microsystems Inc. (15pp)

9 **"Worst Case Design For Integrated Circuits"**
Discusses defining worse case conditions of an IC design parameter variations, breadboarding for verification of worse case conditions and parasitic effects.
Interdesign APN-2 (5pp)

HNIL/HTL

"Combining HNIL and CMOS—An Optimum Design Technique"
See listing under (Interface) MOS/Bipolar (Teledyne Semiconductor)

HNIL/HTL (cont)

10 **"Combining HNIL and CMOS—an Optimum Design Technique"**
Outlines advantages of combining HNIL and CMOS devices in system design, includes HNIL/CMOS interface techniques.
Teledyne Semiconductor APB 1 (3pp) Data and Design Manual $5.00

11 **"Design Techniques with HiNIL 367 Quad Schmitt Trigger"**
General discussion of Schmitt Trigger and the differences of the 367, which ignores open inputs and offers 3.5v noise immunity. Applications include line receivers, pulse stretchers, ac detectors, free-running and voltage-controlled oscillators.
Teledyne Semiconductor HiNIL AN-2 (4pp)

12 **"Designing Programmable Controllers with HiNIL"**
(380, 312, 371, 311, 372, 302)
Discusses using HNIL circuits, such as BCD-to-decade decoders, decode counters, buffers, gates and flip-flops, to design programmable controllers ranging in complexity from simple single-output systems to cascaded systems with multiple output.
Teledyne Semiconductor AN-3 (4pp) Data and Design Manual $5.00

13 **"HiNIL 375 Universal Shift Register"**
Operation and applications of this synchronous 4-bit device as a 4 and 8-bit shift-left, shift-right register, 7 and 8-bit parallel-to-serial and serial-to-parallel converters and various counters.
Teledyne Semiconductor HiNIL AN-4 (10pp)

14 **"HiNIL Interface Summary"**
Circuit diagrams show how to interface HNIL devices with TTL/DTL/RTL, TTL, CMOS, PMOS, and NMOS circuits.
Teledyne Semiconductor APB 5 (1pp) Data and Design Manual $5.00

15 **"High Noise Immunity Logic—Powerful, Versatile and Growing"**
Discusses advantages of using HNIL devices in systems operating in electrically noise environments.
Teledyne Semiconductor AN-5 (5pp) Data and Design Manual $5.00

16 **"Keeping the Bugs Out of Microprocessor Systems with High Noise Immunity Logic"**
Discusses the advantages of substituting HNIL interface devices for conventional I/O logic in microprocessor systems.
Teledyne Semiconductor APB 4 (1pp) Data and Design Manual $5.00

17 **"Noise Immunity with Motorola High Threshold Logic"**
(MC660 Series)
Compares noise immunity characteristics between High Threshold Logic (HTL) and standard saturated logic devices. Discusses noise injection and noise reduction techniques.
Motorola AN-298 (5pp)

18 **"Protecting Logic Inputs"**
Discusses the use of resistors, capacitors and diodes for protecting logic-circuit inputs from large voltage spikes.
Teledyne Semiconductor APB 2 (2pp) Data and Design Manual $5.00

DIGITAL

HNIL/HTL (cont)

1 **"The 355 Timer Solves Noise Problem"**
Compares the 355 and 555 timer chips in applications using higher power supply voltages.
Teledyne Semiconductor APB 3 (2pp) Data and Design Manual $5.00

2 **"The HiNIL 347-A Dual Retriggerable One Shot with High Noise Immunity"**
Description and application details for this device are provided along with diagrams showing its use in pulse generators, coincidence detectors, frequency dividers, voltage to frequency and frequency to voltage converters, a pulse absence detector and an ac line presence detector.
Teledyne Semiconductor Digital AN-6 (6pp)

3 **"Using Bipolar Logic To Improve Performance in CMOS and Microprocessor Systems"**
(367, 350)
Discusses applications reflecting advantages of speed, power and noise immunity resulting from combining HNIL, Schottky and CMOS in microprocessor systems.
Teledyne Semiconductor AN-7 (4pp) Data and Design Manual $5.00

4 **"Using High Note Immunity Logic"**
Reviews operating characteristics of NiNIL devices and discusses loading rules and techniques for interfacing to MOS circuits and microprocessors.
Teledyne Semiconductor AN-1 (7pp) Data and Design Manual $5.00

5 **"Using Motorola High Threshold Logic"**
(MC660 Series)
Describes MC660 series ICs and provides many of the characteristics of these units. Application examples include logic translation, line driving, and trigger circuits.
Motorola AN-467 (11pp)

High Speed Logic

6 **"A High Speed FIFO Memory Using the MECL MC1143 Register File"**
(MCM10143)
Describes the required features of a high speed FIFO design. Different approaches are compared and a design is shown using the MC10143 Multiport Register File.
Motorola AN-730 (6pp)

7 **"AC Noise Immunity of MECL 10,000 Integrated Circuits"**
(MECL)
Discusses ac noise immunity. Describes test circuits for measuring this immunity and the results to be expected for MECL 10,000 circuits.
Motorola AN-592 (6pp)

8 **"An MSI 500 MHz Frequency Counter Using MECL and MTTL"**
(MECL)
Describes design of 8-digit LED readout counter using MECL III, 10,000 and TTL. Discusses two prescalers using MECL, two input amplifier designs, and a time-base controller for the counter's multiphase clock.
Motorola AN-581 (9pp)

High Speed Logic (cont)

"Bussing with MECL 10,000 Integrated Circuits"
See listing under (Interface) Data Transmission (Motorola)

9 **"F10,000 Series ECL"**
(ECL Series)
Operation and circuit parameters are described for the Fairchild ECL Series.
Fairchild AN-330 (6pp)

10 **"IC Crystal Controlled Oscillators"**
(MC1023, MC1662, MC10101, MC10116)
Describes use of MC1023 OR/NOR gate as an amplifier and oscillator. Discusses square wave oscillator circuits with crystal control capable of output frequencies up to 150 MHz. Examples use MC10116/10101, and MC1662.
Motorola AN-417B (4pp)

11 **"Interconnection Techniques for Motorola's MECL 10,000 Series Emitter Coupled Logic"**
(MECL)
Describes some of the characteristics of high digital signal lines and gives wiring rules for MECL 10,000 circuits. Discusses p-c board interconnects, board-to-board interconnects, and includes wire-wrapping techniques.
Motorola AN-556 (22pp)

12 **"Interfacing with MECL 10,000 Integrated Circuits"**
(MC1650, MC1692, MC10115, MC10116, MC10124, MC10125, MC10128, MC10129, MC10216)
Discusses circuits to interface ECL with TTL, TTL and IBM busses, MOS, low level signals, and LEDs.
Motorola AN-720 (9pp)

13 **"M10800 MECL LSI Circuits are Designed for High-Performance Microprogrammed Processors"**
Describes individual family members and how they tie together in a system. Includes block diagrams of devices and an instruction set table for the processor.
Motorola AN-792 (12pp)

14 **"MECL 10,000 Arithmetic Elements MC10179, MC10180, MC10181"**
(MC10179, MC10180, MC10181)
Describes 10180 dual adder/subtractor, 1018 4-bit arithmetic logic unit/function generator, and 10179 lookahead carry block. Discusses their operation in parallel adders, in both ripple and look ahead systems.
Motorola AN-709 (11pp)

15 **"MECL Positive and Negative Logic"**
(MECL)
Describes equivalences between positive and negative ECL logic and provides guides for converting between them.
Motorola AN-567 (2pp)

16 **"Measure Frequency and Propagation Delay with High Speed MECL Circuits"**
(MECL)
Describes ECL frequency counter useful to 160 MHz and a propagation delay measuring circuit capable of 100-picosecond resolution.
Motorola AN-586 (2pp)

© IC MASTER

DIGITAL

High Speed Logic (cont)

1 **"Simulate MECL System Interconnections with a Computer Program"**
Develops a basic computer program that allows the user to simulate the performance of signal lines and to analyze termination techniques. Applies to ECL and other highspeed digital systems.
Motorola AN-700 (10pp)

2 **"Testing MECL 10,000 Integrated Logic Circuits"**
(MECL)
Describes AC and DC tests in a 50 ohm transmission-line environment for measuring logic levels or noise margins, circuit current, input currents, propagation delays, edge speeds, and flip-flop toggle rates.
Motorola AN-579 (6pp)

3 **"The MC1600 Series MECL III Gates"**
(MC1660, MC1661, MC1662, MC1663, MC1664, MC1665)
Gives typical operating characteristics and explains the operation of various gates in the MECL III family. Describes recommended layout, breadboarding, and testing procedures.
Motorola AN-504 (14pp)

4 **"Understanding MECL 10,000 DC and AC Data Sheet Specifications"**
(MECL)
Discusses basic MECL 10,000 gate structure, transfer curve and dc levels. Covers specifications data sheet, including power supply drain current, high and low output voltages, propagation delay, rise and fall times, and toggle frequency.
Motorola AN-701 (7pp)

5 **"Using Shift Registers as Pulse Delay Networks"**
(MC10135)
Discusses a high-speed delay shift register using the MC10135 flip flop.
Motorola AN-565 (3pp)

6 **"Video Terminal Strips Down to 26 MOS/LSI Chips"**
Discusses the use of single or multiple chip sets to implement the functions of a smart video terminal—programmable I/O and counters, keyboard scanner and encoder, baud rate generator, memory and video timer and controller.
Standard Microsystems AR3-3 (4pp)

High Speed TTL

7 **"The MC3000/MC3100 Series Transistor-Transistor Logic Flip-Flops"**
(MC3050, MC3051, MC3052, MC3060, MC3061, MC3062, MC3150, MC3151, MC3152, MC3160, MC3162)
Describes basic operation of the various flip-flops available in the MC3000/3100 (54H/79H) series and gives typical operating characteristics of each.
Motorola AN-493 (14pp)

IL

8 **"Custom IC Design Using IL Technology"**
(XR-IIL-CHIP)
Compares IL to other technologies. Describes design procedure for linear and digital circuits using master chips.
Exar (5pp)

IL (cont)

9 **"Digital Display Systems"**
Discusses decoding, format, multiplexing, zero suppression for LED, LCD, incandescent, fluorescent and gas discharge displays.
Fairchild AN-212/2 (24pp)

10 **"Monolithic IL Test Circuit Using XR-C409"**
(XR-C409)
A monolithic test circuit has been developed for evaluation of speed and performance capabilities of Exar's (IL technology. This test circuit, designated the XR-C409, is intended to familiarize the IL user and the system designer with some of the performance features of IL such as its frequency capability and power-speed tradeoffs.
Exar AN-17 (4pp)

LSI, General

11 **"Semi-Custom LSI Design with IL Gate Arrays Using XR300 and XR500"**
A design approach to developing complex LSI systems using the devices is described.
Exar AN-16 (6pp)

Multiplexers

12 **"TTL MSI Multiplexers and Demultiplexers"**
(DM7210, DM7842, DM8210, DM8842)
Describes features of DM7210 multiplexer and DM7842 demultiplexer and discusses their use in a synchronous digital data transmission system, a keyboard entry decoder, and as minterm generators.
National AN-37 (8pp)

PLAs

13 **"Field Programmable Logic Arrays—An Application Manual"**
Covers basic FPLA operation and describes various applications, including a data cartridge tape drive controller, an opcode decoder for the PDP-11, and a combination sync and video generator.
Signetics (116pp)

14 **"How to Design with Programmable Logic Arrays"**
(DM8575, DM8576)
Discusses operation of PLAs and use as code converters, decode elements in digital processors and sequential controllers.
National AN-89 (8pp)

IL (cont)

1 **"Programmable PROM Memory Expansion"**
(82S102, 82S103)
Describes the use of FPGA in memory intensive systems, which may accept 4K, 8K, 16K, 32K, or 65K PROMs, simply by editing the FPGA program.
Signetics AB-005 (4pp)

2 **"Single Chip Multiprocessor Arbiter"**
Shows how the Field Programmable Logic Sequencer (FPLS) can use state logic to implement a multiprocessor arbiter conveniently and cost effectively.
Signetics AN-007 (4pp)

Pulse Handling

3 **"Nanosecond Pulse Handling Techniques in I/C Interconnections"**
Discusses problems of pulse transmission and measurement for TEM mode on coax, stripline, and above-ground wire systems.
Motorola AN-270 (6pp)

Signal Processors

4 **"2920 Analog Signal Processor Design Handbook"**
(2920)
Through background review and design examples, explains how analog signal processing can be performed with digital signal processing techniques.
Intel (128pp) $7.50

5 **"An LSI Digital Signal Processor for Airborne Applications"**
Discusses the background of digital signal processing with emphasis on radar processors. Described is a digital signal processing board, employing a multiplier-accumulator IC, that includes the basic processor, address generators, controller and system interface.
TRW/LSI A-12

6 **"Bipolar VLSI for High Performance Digital Signal Processing"**
Explains the triple diffusion process used by TRW LSI Products to produce multipliers and multiplier-accumulators. Also included are multiplier configurations for recursive and non-recursive filters and FFTs.
TRW/LSI A-3

7 **"Digital Signal Processing for Radar Systems"**
Shows how VLSI multipliers and multiplier-accumulators can be used in a radar signal processor to achieve: data rate reduction, by means of predictive mechanization; pulse compression, utilizing an FIR matched filter; maximum computational capabilities, via pipelining; high speed convolution, using 2-point DFTs and a complete FFT processor.
TRW/LSI A-2

Signal Processors (cont)

8 **"General Purpose Formant Speech Synthesizer Module Using the Intel 2920 Signal Processor"**
(2920)
Describes phoneme-based speech synthesizer design using the 2920 signal processor.
Intel AP-111 (24pp)

9 **"Hardware Development for a General Purpose Digital Filter Computing Machine"**
Describes the architecture and design of the arithmetic logic unit (ALU) for a digital filter computing machine. The computer control unit (CCU) required to drive the ALU is also explained; the CCU receives user-programmed instructions, interprets them and directs the ALU to perform the appropriate computations.
TRW/LSI A-9

10 **"High-Speed Servo Control with the 2920 Signal Processor"**
(2920)
Describes techniques and principles associated with digital (vs. analog) control system design; includes detailed application examples.
Intel AP-124 (40pp)

11 **"Introduction to the Z-Transform and its Derivation"**
A tutorial discussion of LaPlace and Z-transforms and their use in sampled data systems. Application of the Z-transform to filter synthesis is also treated.
TRW/LSI A-4

12 **"Second Order Recursive Digital Filter Design with the TRW Multiplier-Accumulators"**
Develops the fundamental concepts for second order recursive digital filters and describes some efficient hardware implementations using the TDC1010J multiplier-accumulator.
TRW/LSI A-8

13 **"Using the 2920 Signal Processor in Modem Applications"**
Discusses modem design using digital signal processing techniques and detailed design examples for various modems.
Intel AP-117 (40pp)

TTL, General

14 **"9338 8-Bit Multiple Port Register"**
(9338)
Describes the features of this device, the TTL/MSI equivalent and parallel serial expansion capabilities. Covers use as three address arithmetic unit with eight registers, and use in a first-in first-out memory.
Fairchild AN-294 (6pp)

15 **"Characteristics and Applications of Tri-State IC's"**
(DM7093, DM7490, DM7214, DM7230, DM7551, DM7598, DS7831, DS8831)
Describes application of the general configuration of the Tri-State logic family and discusses application of the following: quad bus-buffer gates, dual 4:1 multiplexer, demultiplexer and bus-interchange switch, quad-D flip-flop, expandable 256-bit ROM, and quad driver.
National AN-45 (12pp)

DIGITAL

TTL, General (cont)

1 **"Medium Scale Integration in the Numerical Control Field"**
(MC4016, MC4018, MC4024, MC4044, MC4324, MC4344)
Discusses operation of MC4016 decade programmable cascadeable counter, MC4324/4024 dual voltage controlled multivibrator, and MC4344/4044 frequency phase detector. Describes applications of these devices in audio frequency comparator, frequency synthesizer, and motor speed control circuits.
Motorola AN-541 (10pp)

2 **"Microprocessor—GPIB Interfacing with the 96LS488"**
(96LS488)
Shows how to interface instruments and system components that talk, listen or talk and listen in accordance with the IEEE-488 standard for programmable instrumentation. Sample applications demonstrate use with various microprocessors.
Fairchild Application Note 351 (24pp)

3 **"TTL Integrated Circuits—Applications of MSI Devices"**
Covers counters, modulo-N dividers, decoders, switches, adders, comparators, parity generators, shift registers and bus-ORable flip-flop. Describes many applications, including up/down counters, a stepping waveform generator, shift registers, frequency synthesizers, digital data demultiplexer, analog commutator, minterm generator, ripple carry parallel adder and tape position locator.
National AN-36 (23pp)

4 **"TTL/MSI 9334 8-Bit Addressable Latch"**
(9334)
Describes operation and application, including 16 and 32-bit addressable latches, 16-word by 4-bit memory, demultiplexer and decoder, 8-bit A/D converter and a 16-bit serial-to-parallel converter.
Fairchild Application Note 220 (8pp)

5 **"Tri-State Logic Applied in a Computer System Can Reduce System Cost and Provide Added Performance"**
(DM8556)
Analyzes Tri-State characteristics using the DM8556 counter/register as an example. Shows how performance of PDP-8 can be improved using TSL.
National AN-73 (7pp)

6 **"Tri-State Logic in High Speed Memories of Microprogrammed Computers"**
(DM8551)
Discusses tri-state logic in general and its use in scratchpad memories. Covers storage of microinstructions and program constants in high-speed ROMs.
National AN-47 (5pp)

7 **"Tri-State Logic in Modular Systems"**
(DS7831, DM8093, DM8094, DM8214, DM8230, DM8551, DM8552, DM8598, DS8831, DM8840, DM8842, DM8846)
Discusses output drive characteristics logical control, safety factors in Tri-State Logic circuits. Describes applications, including complex switching functions, driving and transmitting, multiplexing, data storage, decoding, and data manipulation.
National AN-43 (16pp)

Trigger Circuits

"1.3 Volt IC Flasher, Oscillator, Trigger, or Alarm"
See listing under (Linear) Timers (National)

8 **"Advantages of the AM26123 Compared with the AM54/74123"**
(AM26123, SN54123, SN74123)
Discusses changes in the pulse width circuits and the addition of an output latch.
Advanced Micro Devices Application Brief (4pp)

9 **"CMOS Schmitt Triggers"**
(MC14093B, MC14583B, MC14584B)
Operating characteristics, theory of operation, and Schmitt trigger applications are covered for digital logic systems.
Motorola AN-768 (8pp)

10 **"CMOS Schmitt Trigger—a Uniquely Versatile Design Component"**
(MM54C14, MM74C14)
Analyzes CMOS Schmitt triggers and outlines applications including a light activated switch, an RC oscillator, and a pulse stretcher. Also outlines the benefits of hysteresis.
National MOS/LSI Databook AN-140 (6pp)

11 **"Designing with SN54/74LS123 Dual Retriggerable Monostable Multivibrators"**
(SN54LS123, SN74LS123)
Includes descriptions of device used in frequency discrimination, missing pulse detection, pulse width detection, frequency doubling.
Texas Instruments Application Report CA-196 (12pp)

12 **"Schmitt Triggers and Multivibrators"**
(MONOCHIP)
Discusses implementation of Schmitt triggers and multivibrators on an NMOS gate array. Presents design considerations and electrical characteristics for both at 5 and 12 V.
Interdesign APN-13 (7pp)

13 **"Using the CMOS Dual Monostable Multivibrator"**
(MM54C221, MM74C221)
Discusses device theory, accuracy, and diagrams typical applications including oscillator circuits, a frequency magnitude comparator, and a linear VCO.
National CMOS Databook AN-138 (6pp)

MICROPROCESSOR

Applications

1 "68047 Video Display Generator"
(S68047)
Describes a low cost IC that provides a link between an MPU and a standard black and white or color television set. Includes software implementation.
American Microsystems AN796801 (12pp)

2 "A Dual Processor System for Use in the EXORciser"
Introduces dual processing and presents the design of a dual processor system for use in the EXORciser. In the system discussed, the μP's have control of a common bus on opposite phases of the clock.
Motorola AN-777 (13pp)

3 "A Low Component Count Video Data Terminal Using the DP8350 CRT Controller and the INS8080 CPU"
(DP8350, INS8080A, INS8250)
Describes a video data terminal system. Provides block diagrams and short descriptions of individual circuit elements as well as system schematic.
National Interface Databook AN-199 (10pp)

4 "A Low Cost-MOS/LSI Based Smart CRT Terminal"
(CRT5037, KR3600, ROM4732, CRT8002, COM8046, COM8251, 8085)
Presents design of a "smart" word editing CRT terminal with 29 IC's and programmable format.
Standard Microsystems AN3-1 (20pp)

5 "A Low-Cost Terminal Using the MC6801"
(MC6801, MC6847, MC1372)
Provides instructions by using an unmodified television set as a monitor terminal by applying a microcomputer, a video display generator and an RF modulator. Includes wiring diagram, program flow chart and program listing.
Motorola AN-798 (21pp)

6 "A Matrix Printer Controller Using the F8 and F3870 Circuits"
(F8, F3870)
Describes the construction of a matrix printer controller using the devices. Includes software listings and diagrams.
Fairchild AN-340 (15pp)

7 "An Interactive Graphic System Using the MC6809"
(MC6809, MC6847, MC1372)
Details procedures for implementing cost-effective graphic displays on the video screen of a small business computer.
Motorola Semiconductor AN-825 (28pp)

8 "An Introduction to Digital Spectrum Analysis including a High Speed FFT Processor Design"
Describes the design of a high-speed FFT processor, particularly the architecture and address generation. Also included is an explanation of the use of bit-slice microprocessors as FFT sequencers.
TRW/LSI A-11

9 "Analog-to-Digital Conversion Using the S2000 Family"
(S2000)
Presents four a/d conversion schemes of varying complexity incorporating the device. Block diagrams are supplied.
American Microsystems AN-79-2K-10 (4pp)

Applications (cont)

10 "Automatic Multipoint Pressure Measurement"
(INS8060)
Details design procedures for making a multipoint pressure measurement and control system using a microcomputer with 12-bit A/D resolution; includes software program listing.
National Semiconductor AN-235 (16pp)

11 "CRT Terminal Design Using the 8275 and 8279"
(8275, 8279, 8224, 8080, 8257, 8228, 8212, 8251, 2708, 2714, 2716)
Provides component descriptions and system design details needed to apply the 8275 programmable CRT controller and 8279 programmable keyboard/display interface in CRT systems. Flowcharts, sample code, and schematics included.
Intel AP-32 (57pp)

12 "Communication Interfaces for the IMP-16"
(IMP-16)
Describes the use of this microprocessor in leased line and switched line applications with the communications conforming to EIA standard RS232-C.
National AN-152 (13pp)

13 "Controlled Dot Matrix Printer S9900"
(S9900)
Describes use of the device to control a 7040 series dot matrix printer. Supplies block diagram, flowchart, and software listing.
American Microsystems AN-79-99-03 (7pp)

14 "Correcting Errors Digitally in Data Acquisition and Control"
(SDM856/857, MP20, MP21)
Describes how to combine a microprocessor with analog techniques to optimize the compensation of gain and offset errors in digital data-acquisition and control applications.
Burr-Brown Research AN-101 (6pp)

15 "Data Acquisition Networks with NMOS and CMOS"
(MC14433, MC6800)
Discusses an 8-channel acquisition network using the MC14433 A/D converter and the MC6800 microprocessor.
Motorola AN-770 (11pp) MP000500

16 "Data Handling with the IMP-8"
(IMP-8, IMP-16)
Covers basic concepts for transferring data from a memory to peripherals.
National AN-117 (4pp)

17 "Details of INS1771 FDC"
(INS1771)
Introduces the device and its command set. Provides timing diagrams and system block diagrams.
National AN-220 (10pp)

18 "Direct Memory Access with the 8257 DMA Controller"
(8257, 8080A, 8085A)
Examines determining the need for DMA, operation of the device and its application in an MCS-85 system controlling a Burroughs self-scan display panel. Includes diagrams, flowcharts, and software.
Intel AP-48 (4pp)

©IC MASTER

MICROPROCESSOR

Applications (cont)

1 **"FD179X Application Notes"**
(FD179X)
Describes devices and their operation. Includes schematics and timing diagrams.
Western Digital (16pp)

2 **"Function/Application of the LD122/LD121A ±4½ Digit A/D Converter Set in Measurement Systems"**
An updated version of AN77-3 extending system resolution beyond 10 μV. Describes interfacing guidelines and precautions.
Siliconix AN80-8 (9pp)

3 **"Graphics Using the DP8350 Series of CRT Controllers"**
(DP8350)
General discussion on using the device in CRT graphics applications. Topics covered include using line buffers and memory mapped graphics.
National AN-212 (4pp)

4 **"Interfacing M6800 Peripheral Devices to the MC68000 Asynchronously"**
(M6800, MC68000)
Describes a technique for interfacing peripheral devices to an MC68000 microprocessor using a 4-chip TTL circuit.
Motorola Semiconductor AN-808 (9pp)

5 **"Interfacing and Controlling Digital Temperature Data Using the MC6800"**
(MC6800, MC6821)
Provides block diagrams, instruction set, and discussion of a temperature control system using the device.
Motorola AN-782 (4pp)

6 **"Keyboard Display Scanning with Intel's MCS-48 Microcomputers"**
(8035, 8039, 8048, 8049, 8021, 8022, 8748, 8041, 8741)
Presents a software package for interfacing the devices to keyboards and displays. Includes circuit diagrams as well as program details.
Intel AP-40 (24pp)

7 **"Low Cost Versatile CRT Terminal Using the CRT5027 and CRT8002"**
(CRT5027, CRT8002)
Describes devices and their uses in a CRT terminal with a screen format of 16 rows of 64 characters. Provides schematics, block diagram, and the changes required for an 80 character/row, 24 row format.
Standard Microsystems AN2-1 (11pp)

8 **"Memory-Mapped I/O"**
(TMS9900, TMS9927)
Discusses a technique for transferring 8 or 16 bits in parallel to an I/O port. The method is useful for applications requiring the transfer of complete bytes or words such as for parallel communication links.
Texas Instruments (6pp)

Applications (cont)

9 **"Microprocessor I/O Techniques"**
(TMS9900)
Discusses the selection of the proper I/O mode for different applications to simplify hardware interface and associated software.
Texas Instruments (6pp)

10 **"Microprocessor Mates with MOS/LSI Keyboard Encoder"**
(IMP-16)
Shows how to interface a keyboard to the IMP-16 microprocessor for text editing.
National MOS/LSI Databook AN-128 (6pp)

11 **"Motor RPM Control: An INS8060 Multiprocessor Example"**
(INS8060)
Examines multiprocessor theory and system implementation. Includes circuit diagrams and software listings.
National AN-201 (10pp)

12 **"Musical Application for the S2000 Microcomputer"**
(S2000)
Describes capabilities on the device when programmed to generate any of 60 musical frequencies and play on command any one of the twelve pre-programmed tunes.
American Microsystems AN-79-2K-02 (14pp)

13 **"Programmable Appliance/Outlet Controller using the S2000/2150"**
(S2000/2150)
Discusses hardware and software considerations for designing a programmable timer based on the S2000/2150 microprocessor interfacing with an LED display and keypad.
American Microsystems AN-79-2K-14 (3pp)

14 **"S2000 Software Seconds Timing and Display"**
(S2000)
Gives introductory software program demonstrating use of instructions and programming techniques for controlling LED time display.
American Microsystems AN-79-2K-07 (3pp)

15 **"S2000 Software—Touch Control Keyboard Scan and Display Output"**
(S2000)
Describes the display and keyboard scan subroutines for a typical display output program.
American Microsystems AN792K06 (6pp)

16 **"S9900 Simplifies Design of Bidirectional I/O Module"**
(S9900)
Demonstrates a bidirectional I/O module built by incorporating standard addressing and multiplexing logic with the device.
American Microsystems AN-79-99-01 (2pp)

17 **"Serial I/O and Math Utilities for the 8049 Microcomputer"**
(8049)
Provides several program modules which illustrate the increased capabilities of the device over initial members of the family. Modules cover full duplex serial I/O, binary multiply and divide, and binary to BCD and BCD to binary conversions.
Serial I/O and Math Utilities for the 8049 Microcomputer

MICROPROCESSOR

Applications (cont)

1 **"Simplify CRT Terminal Design with the DP8350"**
(DP8350)
Describes a low-cost CRT data terminal design based on the DP8350 CRT controller and SC/MP microprocessor. Features screen scroll, RS-232C interface, and adjustable band rate. Includes schematics, flowcharts, and PC board layout.
National Interface Databook AN-198 (10pp)

2 **"Soft Scrolling with the CRT5037 VTAC"**
(CRT5037)
Describes method of performing "soft scroll" with the CRT5037.
Standard Microsystems AN1-3 (4pp)

3 **"Special Considerations in Using the MC6801 Interrupt Capabilities"**
(MC6801)
Reviews MC6801 interrupt operation and discusses important interrupt design constraints.
Motorola Semiconductor AN-807 (11pp)

4 **"TMS9900 CRT Controller"**
(TMS9900)
Analyzes a CRT controller system that employs a TMS9900 microprocessor. Contains diagrams of the system and a software monitor routine.
Texas Instruments Application Report MOSA6 (32pp)

5 **"The CRT5027/37/57: Video Timer-Controller"**
(CRT5027, CRT5037, CRT5057)
Characterizes the device and explains how to program it. Provides examples for systems with 80 characters by 24 rows and 40 characters by 12 rows. Schematics and system block diagrams are included.
Standard Microsystems AN-1-1 (18pp)

6 **"The IMP-16 in Communication Applications"**
(IMP-16)
Discusses communication processor functions, requirements for communications microprocessors and system considerations. Gives programming examples including status monitoring, data transmission, message routing, interrupt handling and error control.
National AN-134 (6pp)

7 **"The IMP-8C as a Data Concentrator"**
(IMP-8C)
Describes the use of this microprocessor in data concentrator applications. Covers use with a full duplex modem, and the terminal controller interface.
National AN-113 (6pp)

8 **"Using the 8202 Dynamic RAM Controller"**
(8202, 8085A, 8086)
Describes the device in detail and illustrates its use. Covers functionality, interfacing, decoupling, and speed selection of memory array. Provides 8085A application examples and an interconnect of the 8086 max mode system with 128K bytes of dynamic RAM.
Intel AP-45 (25pp)

9 **"Using the 8295 Printer Controller"**
(8295)
Describes device which interfaces microprocessors to the LRC 7040 series of dot matrix impact printers. Provides software and schematics for various interface schemes.
Intel AP-54 (31pp)

Applications (cont)

10 **"Using the CRT5027 VTAC for Double Height Characters"**
(CRT5027)
Outlines procedures for obtaining double height characters using the device and a 32 x 8 PROM. Circuit diagram and program for both the device and PROM included.
Standard Microsystems AN1-2 (2pp)

11 **"Vacuum Fluorescent Display Driven by TMS9940"**
(TMS9940)
Describes how the TMS9940 single-chip microcomputer makes an efficient, low-cost controller for multi-character fluorescent displays.
Texas Instruments Applications Report MP717 (28pp)

12 **"Video Terminal Interface Design Using TMS9927 Controller/Timer"**
(TMS9927)
Describes a terminal interface design for connecting a TM990 microcomputer module with a keyboard and an RS Video Monitor to form a complete stand alone terminal.
Texas Instruments Application Report MP024 (48pp)

13 **"μPD765 Single/Double Density Floppy Disk Controller"**
(uPD765)
Presents a complete floppy disk controller design incorporating the device. Allows DMA or non-DMA operation. Includes block diagram and timing diagrams.
NEC Microcomputers AN-8 (32pp)

General

14 **"Z8000 vs 6800 Register Architecture"**
(Z8000)
Examines the difference between the Z8000 and 6800 register architectures on the basis of general-purpose vs special-purpose registers, pairing vs telescoping of subregisters and register-set extensibility.
Zilog (5pp)

"A Non-Volatile Microprocessor Memory Using 4K N-Channel MOS RAMS"
See listing under (Memory) RAMS (Motorola)

15 **"AmZ8001/AmZ8002 Processor Interface"**
(AmZ8001, AmZ8002)
Three-chapter booklet covering interfacing fundamentals, memory interfacing techniques and I/O interfacing techniques for the AmZ8000 system.
Advanced Micro Devices AM-PUB089 (81pp)

16 **"Comparison Study NSC800 vs 8085, Z80"**
(NSC800)
Compares the NSC800, 8085 and Z80 MPUs on the basis of critical selection factors, including speed, bus structure, architecture, instruction sets and I/O requirements.
National Semiconductor uB 3 (3pp)

17 **"S6802 Microprocessor Crystal Specification"**
(S6802)
Explains method for specifying the oscillator crystal for the S6802 microprocessor.
American Microsystems AN796803 (1pp)

©IC MASTER

MICROPROCESSOR

General (cont)

1 **"Software Comparison NSC800 vs 8085, Z80"**
(NSC800)
Compares the instruction sets of the NSC800, 8085 and Z80.
National Semiconductor uB4 (3pp)

I/O

2 **"Application Prototype Board (APB) for MC6801/MC6803/MC68701 MCUs"**
(MC6801, MC6803, MC68701)
Describes the design and fabrication of an application prototype board for evaluating single-chip microcomputers in the MC6801 family. Includes a parts list and artwork needed to generate the p-c board.
Motorola AN799 (12pp)

3 **"Asynchronous Communications for the MC68000 Using the MC6850"**
(MC68000, MC6850)
Discusses operation of an asynchronous communications interface adapter and interconnection requirements for use with the MC68000 microprocessor.
Motorola Semiconductor AN-817 (4pp)

4 **"Color Graphics for the MC68000 Using the MC6847"**
(MC68000, MC6848)
Illustrates how to use a video display generator to provide a video signal to a color or B/W television receiver in a microprocessor-based system.
Motorola Semiconductor AN-815 (3pp)

5 **"Designing Low Power 12-Bit Microprocessor Systems"**
(IM6100)
Examines selection considerations for CMOS microprocessors. Discussion includes power consumption, word length, architecture, I/O structure and throughput.
Intersil Application Bulletin M009 (4pp)

6 **"Expanding 48-Series Program Space in 4K Byte Increments"**
(INS8048)
Reviews the external memory interface for the 48-Series microcomputers and shows how to use external ICs for paging control of add-on memory.
National AN254

7 **"Hardware Considerations for Direct Memory Access Using the MC6809 Microprocessor Unit and MC6844 DMA Controller"**
(MC6809, MC6844)
Discusses hardware considerations regarding DMA in systems using the MC6809 microprocessor, with emphasis on DMA dead-state protection.
Motorola Semiconductor AN-820 (5pp)

8 **"Increasing Throughput for IMP-16 Serial Input/Output"**
(MM5303)
Describes use of device to improve communication between microprocessor and peripheral with little increase in component count.
National AN-160 (7pp)

I/O (cont)

9 **"Interlaced Video Displays Utilize Low Cost CRT Controllers"**
Discusses the design of interlaced raster scan CRT displays that refresh at half the usual rate and thus require less expensive components.
Standard Microsystems AR1-5 (6pp)

10 **"Microprocessors—An Introduction"**
Shows system components, defines terms and describes operation of an elementary computer system.
National AN-114 (4pp)

11 **"Prioritized Individually Vectored Interrupts for Multiple Peripheral Systems with the MC68000"**
(MC68000)
Reviews MC68000 interrupt structure and discusses circuits comprised of standard TTL parts for generating interrupt vector numbers.
Motorola Semiconductor AN-819 (6pp)

12 **"Synchronous I/O for the MC68000 Using the MC6852"**
(MC68000, MC6852)
Describes operation and interface requirements of a synchronous serial data adapter for use with the MC68000 microprocessor.
Motorola Semiconductor AN-818 (5pp)

13 **"The Video Display Generator as a Color Television Interface"**
(MC6847, MC1372)
Describes two ICs that convert a television display into an active, intelligent terminal when used with an MPU, some memory devices and about a dozen passive discrete components.
Motorola Semiconductor AN-822 (18pp)

14 **"Use of the CDP1852 8-Bit I/O Port with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1852)
Describes several applications of the CDP1852 I/O Port and specifically explains its use in the CDP18S020 Evaluation Kit.
RCA ICAN-6538 (4pp)

15 **"Use of the CDP1854 UART with RCA Microprocessor Evaluation Kit CDP18S020 or EK/Assembler-Editor Design Kit CDP18S024"**
(CDP1854)
Describes several methods of interfacing the CDP1854 with the CDP1802 microprocessor and specifically explains the use of the CDP1854 in the CDP18S020 and CDP18S024 Kits.
(CDP1854)
RCA ICAN-6632 (6pp)

16 **"Using the CRT5037 VTAC for a 512 x 512 Dot Matrix"**
(CRT5037)
Describes the design of dot-graphic terminals using CRT controllers. Includes a detailed example of a 512 x 512 dot graphic terminal.
Standard Microsystems AN1-4 (8pp)

MICROPROCESSOR

I/O (cont)

1 **"Using the MP8418 Microcomputer Analog I/O System"**
(MP8418)
Discusses theory and application of a board-level data acquisition system that interfaces with the Intel Multibus. Includes troubleshooting software for system checking.
Burr-Brown AN-95 (12pp)

Programming

2 **"12-Bit Addressing with the Z8600 Series Family"**
(Z8600)
Shows how to use 12-bit addressing to manipulate data in the internal program memory, external program memory and the external data memory of a Z8600-based system.
Zilog (2pp)

3 **"6500 Programming Manual"**
(MCS6500 Series)
Describes the software aspects of the 6500 microprocessor family and related support devices.
MOS Technology $6.95

4 **"8080/8085 Assembly Language Programming Manual"**
(8080A, 8085A)
Primarily a reference manual, this manual describes the 8080/8085 instruction set, assembly language concepts, assembler directives, macros, programming techniques and interrupts.
Intel $10.00 (210pp)

5 **"A Methodology for Programming COSMAC 1802 Applications Using Higher-Level Languages"**
(COSMAC 1802)
Discusses a method for optimizing time-critical portions of programs written in higher-level languages for COSMAC 1802 applications by recoding those portions in assembly language.
RCA ICAN-6918 (4pp)

6 **"A Microprogram Development System"**
(IMP-16)
Describes the application of microprogramming to LSI processors and the advantages of a microprogram development system for hardware and software.
National AN-123 (6pp)

7 **"A Z89-Based System Using the DMA with the SIO"**
(Z80)
Describes the use of Z80A SIO and DMA hardware/software in a Z80-based system to transfer data to the SIO via the DMA.
Zilog (11pp)

8 **"An Introduction to RIO Text Processing"**
Presents for the beginning microcomputer user an introductory overview of the fundamentals of Relocatable Modules and Input/Output Management.
Zilog AN1 (24pp)

Programming (cont)

9 **"Architectural Concepts for Microprocessor Peripheral Families"**
(Z8038)
Discusses overcoming the constraints of limited microprocessor signal lines by using an intelligent FIFO I/O device.
Zilog (3pp)

10 **"Binary Synchronous Communication Using the Z80 SIO"**
(Z80)
Discusses design considerations for using the Z80 SIO for implementing communication protocol for information exchange between data-processing devices.
Zilog (4pp)

11 **"CDP1802 Microprocessor-Based Setback Thermostat"**
(CDP1802)
Covers the design of a programmable, setback thermostat circuit for controlling heating and air-conditioning systems.
RCA ICAN-6901 (7pp)

12 **"COSMAC Software Development Program on GE Mark III Time Sharing System"**
(CDP 1802)
Describes the COSMAC Software Development Packages (CSDP) available for the GE Mark III time sharing system. Briefly covers the assembler and the simulator debugger which make up the package.
RCA ICAN-6656 (4pp)

13 **"Chaining the Execution of Disk Resident Basic-M Program Overlays"**
(XDOS)
Describes a way to implement a "chain" instruction using the XDOS, COMND system call.
Motorola Semiconductor AN-812 (6pp)

14 **"HM-6100 Microprocessor Basic 4K Software"**
(HM6100)
Describes the Digital Equipment Corp. PDP-8 software.
Harris Semiconductor AN-HM003 (4pp)

15 **"HM-6100 ROM Based Subroutine Calls"**
(HM6100)
Describes two methods for returning to the proper program location after executing a subroutine.
Harris Semiconductor AN-HM008 (4pp)

16 **"How To Use Fortran with Other Intel Languages"**
Shows how to link together program modules comprised of Fortran, PL/M and assembly language; example application is included.
Intel AP-44 (22pp)

17 **"IMP-16 Programming Techniques"**
(IMP-16)
Discusses several aspects of the instruction set to enable programmer to code more efficiently. Includes discussion of subroutines, subroute parameter passing, recursive subroutines, as well as sample programs.
National AN-111 (6pp)

18 **"ISIS-II System Calls"**
Discusses how ISIS routines facilitate program generation by providing interface functions such as program I/O, diskette directory maintenance and program loading and execution routines.
Intel AP-80 (20pp)

© IC MASTER

MICROPROCESSOR

Programming (cont)

1 **"Inter-Intellec Communications"**
(Intellec Series II)
Illustrates how to establish a communications link between two Intellec Series II development systems to allow file transfer and increased program development flexibility.
Intel AP-81 (30pp)

2 **"Interfacing 8500 Peripherals to the Z80"**
(Z80)
Describes hardware interface requirements and interrupt structure of 8500 series peripherals in a Z80 system.
Zilog (5pp)

3 **"Interfacing PLM Code to CDOS System Functions"**
Describes an array of PLM procedures and supportive macro definitions for interfacing PLM programs to CDOS system functions; includes example program.
RCA ICAN-6928 (6pp)

4 **"Letting the MC68702 Program Itself"**
(MC68701)
Describes how the MC68701 MCU controls data flow to an on-chip EPROM and gates programming power during programming with the help of only a few external devices.
Motorola Semiconductor AN-832 (8pp)

5 **"M6800 Microprocessor Programming Manual"**
(MC6800)
Provides information needed to program the unit, discusses the instruction set, source language, assembler, simulator, Build-Virtual-Machine and HELP programs. Gives programs examples.
Motorola $10.00 (303pp)

6 **"MC6802/MC6846 with MIKBUG 2.0: A Powerful Software Development Team"**
(MC6802, MC6846)

7 **"MCS-48 and UPI-41 Assembly Language Manual"**
(8041, 8048, 8741, 8748, MCS-48, UPI-41)
Describes the assembly language for programming the MCS-48 and UPI-41 single device microcomputers. Covers procedures and controls for operating the assemblers to translate the source file into object code.
Intel $10.00 (192pp)

8 **"Memory-Mapped vs Explicit I/O"**
(Z8000)
Compares two approaches to the addressing of microprocessor I/O transactions: the memory-mapped I/O of the 68000 and the explicit I/O scheme of the Z8000.
Zilog (2pp)

9 **"Microprocessor Interface Software"**
(NC7033)
Describes how to interface the NC7033 MN05 non-volatile memory directly with an 8085 or 8080 microprocessor.
Nitron AN101 (28pp)

10 **"Microprogramming Handbook"**
(2911, 2909, 29811, 2922, 29803)
Discusses microprogramming a bipolar processor. Includes sections on microprogram memory, sequencing, branching, jumping, and subroutines.
Advanced Micro Devices, $5.00 (44pp)

Programming (cont)

11 **"PL/M-80 Programming Manual"**
(8080, PL/M-80)
Provides in readable format a complete description of the PL/M language as implemented by the PL/M-80 compiler.
Intel $10.00 (134pp)

12 **"Partitioning a Basic-M Source Program"**
(XDOS)
Describes how to partition a source program into several separately compiled modules that can reside in ROMs in the final environment outlines user-program design constraints and illustrates the assembly routine for calling one module from another.
Motorola Semiconductor AN-813 (6pp)

13 **"S2000 Software Routines: Keyboard Entry, LED Display, Software Timing and Sound Generation"**
(S2000)
Describes software program that demonstrates capability of the S2000 single-chip MCU.
American Microsystems Inc. (8pp)

14 **"SC/MP NIBL ROM Hardware Implementation"**
Shows the design of the RAM and ROM memories needed to implement National's Industrial Basic Language on the SC/MP LCDS.
National AN-204 (2pp)

15 **"Segmented vs Linear Addressing"**
(Z8000)
Compares two approaches used for addressing microprocessor memory: the segmented addressing method of the Z8000 and the linear addressing method of the 68000.
Zilog (9pp)

16 **"Serial Clock Generation Using the Z8536 CIO"**
(Z80, Z8536)
Describes the use of a counter/timer I/O device for generating bit-rate clocks for asynchronous communications in a Z80-based system.
Zilog (4pp)

17 **"Serial Communication with the Z80 DART"**
(Z80, Z8470)
Covers hardware and software considerations for using the Z80 DART, an IC that provides two independently programmable, asynchronous communication channels for a Z80-based system.
Zilog (9pp)

18 **"Signetics Micro Assembler Reference Manual"**
(N3002, 8X02)
Describes this FORTRAN program developed as a design tool for writing microprograms. This microprogram defines its own assembly language, writes the microprogram, then assembles it to generate tapes to load memory. Program is suitable for most microprogrammed applications.
Signetics $4.00 (74pp)

19 **"Software Control of Microprocessor-Based Realtime Clock"**
(CDP1802)
Shows how to use software to implement a 12-hr clock, 4-yr calendar and a 12-hr elapsed time indicator with a microprocessor-based timing system.
RCA ICAN-6677 (9pp)

MICROPROCESSOR

Programming (cont)

1 **"Starplex's "Submit Utility" Speeds Program Development"**
(Starplex)
Illustrates how the Submit utility program increases programming speed and accuracy.
National Semiconductor SB SPX-AP-8 (7pp)

2 **"The Z80 Family Program Interrupt Structure"**
(Z80)
Describes the Z80 interrupt structure, which includes one non-maskable and three software maskable interrupt modes. Provides flow charts, timing diagrams, and circuit diagrams.
Zilog (31pp)

3 **"Using the Z80 SIO with SDLC"**
(Z80)
Covers the use of the Z80 SIO with synchronous data-link control communication protocol.
Zilog (12pp)

4 **"Z80 Family Interrupt Structure"**
(Z80)
Describes the Z80 CPU interrupt process and evaluates the design of the daisy-chain interrupt scheme.
Zilog (12pp)

5 **"μPD379 Application Note"**
(uPD379)
Bisync and SDLC protocols using the μPD379.
NEC Microcomputers $1 (20pp)

Systems

6 **"6500 Hardware Manual"**
(MCS6500 Series)
Describes the hardware aspects of the 6500 microprocessor family and related support devices.
Commodore Semiconductor Group

7 **"A Guide to the Selection of Support Components for the Series 3000 Microprocessor"**
(N3001, N3002)
Categorizes the various components used to implement major sections of a typical microprocessor system.
Signetics AM-1 (4pp)

8 **"A Microprogrammed 16-Bit Computer"**
(AM2901, AM2902, AM2914, AM2913, AM29705)
Presents computer design starting with the specification of a computer from a functional standpoint. Describes architectural units including the ALU, the Program Control Unit, and memory.
Advanced Micro Devices $5.00 (47pp)

9 **"A Minimal S6802/S6846 Systems Design"**
(S6802, S6846)
Presents a minimal prototyping system design using the devices.
American Microsystems AN-79-68-02 (3pp)

Systems (cont)

"A PROM Programmer for the SC/MP LCDS"
See listing under (Memory) PROMs (National)

10 **"A Simple High Speed Bipolar Microprocessor Illustrates System Design and Microprogram Techniques"**
(MC10801, MC10803)
Describes a complete bipolar LSI systems design using 10 ICs to perform 2's complement add, subtract, multiply and divide.
Motorola AN-774 (12pp)

11 **"A User's Guide to the Series 3000 Microprocessor Chip Set"**
(N3001, N3002)
Describes devices, instruction sets. Design examples included.
Signetics AM-2 (14pp)

12 **"AM2914 Priority Interrupt Encoder"**
(AM2913, AM2914, AM2900, 9080A)
Provides data sheet information on devices. Outlines construction of a microprogrammable, bipolar, LSI interrupt structure for the 2900 and 9080A processors using the 2914.
Advanced Micro Devices (33pp)

13 **"AM9513 System Timing Controller"**
(AM9513)
Provides detailed functional description of device. Examines command set, device interfacing, and control elements. Includes block and timing diagrams.
Advanced Micro Devices (16pp)

14 **"An Emulation of the AM9080A: An example of a Microprogrammed Machine"**
(AM2901A, AM2909, 9080A)
Describes the emulation of an 8-bit μP built around four 4-bit slices and three microprogrammed sequences. Provides instruction set and clock cycle tables, block diagrams, a parts list, schematics, a printout of the microprogram definition, and a print out of the assembler statements and object code in an interleaved format.
Advanced Micro Devices $4 (47pp)

15 **"An M6800 Clock System That Handles DMA and Memory Refresh Cycle Stealing"**
(MC6800, MC6875)
Presents a method for stealing cycles from the MPU for DMA transfers, refreshing memory through cycle stealing, and also providing refresh to an MC6800 dynamic MPU after each cycle stolen. Block diagrams included.
Motorola AN-787 (6pp)

16 **"Analog Input/Output for Microprocessors Made Easy"**
(MP10, MP11, MP20, MP21)
Outlines features of devices and describes various ways each can be handwired to suit user configurations. Includes block diagrams of hookups with SC/MP, Z80, F8, 6800, 8080, 8085 and 9002 MPUs as well as discussion of memory mapped vs. accumulator I/O.
Burr Brown AN-87 (6pp)

© IC MASTER

MICROPROCESSOR

Systems (cont)

1 **"Application Memo to Control Store Sequencer 8X02"**
(8X02)
Presents a functional description and gives microprogramming system suggestions.
Signetics Bipolar Application Memo 3 (7pp)

2 **"Application Technique for the 2651 PCI"**
(2651)
Shows application techniques for the 2651 programmable communications interface.
Signetics M26 (2pp)

3 **"Basic Microprocessors and the 6800"**
(MC6800)
Introduces microprocessor basics and the M6800 microcomputer system including details of the hardware addressing modes, system configuration, and instruction set. Supplies programming examples complete with flow charts, source program, and assembled output.
Motorola $12.90 (272pp)

4 **"Bit-Slice Microprocessor Design Takes a Giant Step Forward with "Scottky-Coupled-Logic" Circuits"**
(IDM2900)
Covers a four-bit slice Schottky-coupled-logic design that combines the flexibility of the industry standard 2900 microprocessor architecture with advanced LSI processing.
National Semiconductor AN-203 (12pp)

5 **"CDP1802-Based Designs Using the 8283 Programmable Counter/Timer"**
(CDP1802)
Describes methods by which the 8283 programmable counter/timer can be incorporated in RCA COSMAC-based microprocessor systems (CDP1802)
RCA ICAN-6693 (4pp)

6 **"Cassette Tape I/O for COSMAC Microprocessor Systems"**
(CDP18S020, CDP18S024, CDP18S025, CDP18S005, CDP18S007, CDP18S691)
Describes circuit and software for adding cassette-tape I/O to the COSMAC evaluation kit and development system, or the Microboard prototyping kit.
RCA ICAN-6934 (4pp)

7 **"Clock-Hold Schemes for the IMP Microprocessor Family"**
(IMP-8C, IMP-16C)
Presents scheme to extend the clock-hold function for additional periods of the main system clock, using the DM8570 shift register.
National AN-105 (4pp)

8 **"Considerations for Interfacing the μPD765 to the CDC9404B and 9406-2, -3 Flexible Disc Drives"**
(uPD765)
Describes design procedures for connecting CDC flexible disk drives to the μPD765 with emphasis on phase lock loop.
NEC Microcomputers AN10 (14pp)

"Data Acquisition System Interface to Computers"
See listing under (Interface) Converters (National)

Systems (cont)

9 **"Design of Clock Generators for Use with RCA COSMAC Microprocessor"**
(CDP1802)
Describes a crystal controlled clock generator using on-chip circuits and crystal and RC generators using external circuits.
RCA ICAN-6565

"Device Operation and System Implementation of the Asynchronous Communications Interface Adapter MC6850"
See listing under (Interface) Data Transmission (Motorola)

10 **"Fine Tuning the ALU Carry Path"**
(DM74S182)
Provides a look at higher speed look-ahead carry techniques. Covers four basic methods (ripple carry, single level, multilevel, shifted) and examines factors affecting choice of technique.
National AN-230 (7pp)

11 **"Floppy Disk Controller"**
(8X330)
Describes hardware and software of a floppy-disk controller design that demonstrates the capabilities of the 8X330 floppy disk formatter/controller.
Signetics

12 **"General Purpose Interface Adapter"**
(S68488)
Defines limitations and characteristics of a general-purpose interface adapter and discusses software considerations for interfacing with the IEEE488-1978 standard instrument bus.
American Microsystems Inc. (3pp)

13 **"Generating Non-Standard Baud Rates with R6551"**
(R6551)
Describes how the R6551 can be used to generate baud rates other than 15 selectable ones specified for the device.
Rockwell Document No. 6500 No. 3 (2pp)

14 **"IDM2901A File Expansion Using the DM85S68"**
(DM85S68, IDM2901A)
Discusses file expansion for the μP using a register array.
National Memory Applications Handbook (1pp)

15 **"IMP-16L DMA—What It Is and How to Use It"**
(IMP-16)
Discusses general theory of the DMA Bus, gives examples of priority expansion and data transfer.
National AN-135 (6pp)

16 **"Increasing the Number of Control Flags and Jump Conditions in the IMP-16C"**
(IMP-16C)
Describes simple and economical method of increasing the number of testable jump conditions and the number of control flags on the IMP-16C microprocessor.
National AN-101 (4pp)

17 **"Interface Techniques for the 2651 PCI"**
(2651)
Covers interfacing the 2652 programmable communications interface with the SC/MP, Z80, 8085, and 6800 microprocessors.
Signetics M22 (8pp)

MICROPROCESSOR

Systems (cont)

1 **"Interfacing 16 Pin Dynamic RAMs to the Z80A Microprocessor"**
(Z80)
Presents the major design considerations, and a design example, for interfacing 16-pin dynamic RAMs, both 4k and 16k to the Z80 and Z80A. Supplies circuit and timing diagrams.
Zilog (27pp)

2 **"Interfacing R6500 Microprocessors to a Floppy Disk Controller"**
(R6500, FDC1781, FDC1791)
Describes the interface between an R6500 μP and a floppy disk controller. Outlines timing considerations and provides a block diagram.
Rockwell Document No. R6500 No. 9 (2pp)

3 **"Low Cost Crystal Oscillator for Clock Input"**
(R6500)
Describes a low cost oscillator circuit which produces the baud input frequency required by the clock generator circuits in the R650X series microcomputers. The circuit uses one of two readily available low cost crystals. Circuit diagram.
Rockwell Document No. 1 (1pp)

4 **"M6800 Systems Utilizing the MC6875 Clock Generator/Drive"**
(MC6875)
Gives extensive design examples using the MC6875 in systems including slow or dynamic memories, and DMA (multiprocessor) applications.
Motorola AN-775 (20pp)

5 **"MC6801/03 Port Expansion"**
(SN74LS374, MC6821, SN74LS163, SN74LS154, SN74LS175, SN74LS377, SN74LS165)
Shows various methods for expanding I/O capability of the MC6801/03 microcomputers using various peripheral chips.
Motorola AN-797 (8pp)

6 **"MCS-51 Microcomputer User's Manual"**
(8051, 8751, 8031)
Describes system architecture, instruction set and software; includes applications examples and data sheets.
Intel (448pp) $7.50

7 **"MCS-85 User's Manual"**
(8085, MCS-85)
Describes this 8085 based system and peripheral components. Extensive coverage through data sheets.
Intel $5.00 (273pp)

8 **"MN1400 Series 4-Bit One-Chip Microcomputers User's Manual"**
(MN1400, MN1402, MN1498, MN1499)
Introduces the MN1400 family. Encompasses system architecture, timing, and the instruction set including examples of various commands and routines.
Panasonic (65pp)

9 **"Microcomputer Applications Handbook"**
Provides application hardware and software information for the entire microcontroller line, which includes both the MCS-48 and the MCS-51 families.
Intel $7.50

Systems (cont)

10 **"Microprocessor Systems Handbook"**
Explains μP hardware, the interaction of hardware and software, and the interfacing of μP's with A/D and D/A converters. Topics covered include memory addressing, I/O operations, and applications of various microprocessors.
Analog Devices $9.50 (218pp)

11 **"Minimum System Design TMS 9900 16-Bit Microprocessor"**
(TMS9900)
Explains system design, system performance, and minimum system configuration.
Texas Instruments Application Report CA-184A (7pp)

12 **"Minimum System Design with the S9900 16-bit Microprocessor"**
(S9900)
Describes device and basic system configuration. Includes timing and block diagrams.
American Microsystems AN-79-99-02 (6pp)

13 **"N8080 System Design Manual"**
(INS8080A, DP8212, DP8216, DP8224, DP8226, DP8228, DP8238, INS8251, INS8255)
Describes the INS8080A μP including architecture, timing, data and instruction representation, and I/O operation and control. Also covers use of various support chips.
National $5.00 (72pp)

14 **"Number Cruncher (MM57109) Interface to Microprocessor"**
(MM57109)
Describes the MM57109 number cruncher unit which can perform most arithmetic functions found in complex hand-held calculators and interfaces either to a microprocessor or a random logic system. Provides schematics of interface logic and a flow chart for initialization of the device.
National AN-186 (10pp)

15 **"Optimizing Hardware/Software Trade-Offs in RCA CDP1802 Microprocessor Applications"**
(CDP1802)
Presents examples of processor interfaces that minimize external hardware and through programming techniques, minimize speed requirements on the CPU.
RCA ICAN-6704 (10pp)

16 **"PIC1650 8 Bit A to D Example Program"**
(PIC1650)
Provides diagram, flowchart, and example program for an A/D converter system using the device.
General Instrument Bulletin 1001 (3pp)

17 **"PPS-4/1 Prototyping with 2708 PROMs"**
(2708, PPS-4/1, MM76, MM77, MM78)
Outlines circuit design and programming considerations needed to build a system prototyping unit using members of the PPS-4/1 family and 2708 PROM.
Rockwell Document No. 29410 No. 22 (2pp)

18 **"Power-On Reset/Run Circuits for the RCA CDP1802 COSMAC Microprocessor"**
Provides diagrams and discussion of several circuits which enable a power-on reset/run capability for the device.
RCA ICAN-6581 (2pp)

Systems (cont)

1 **"Product Capabilities Manual"**
(8X300)
Describes the capabilities of the 8X300 microcontroller family in high-speed applications, including computer peripherals, industrial controllers and telecommunications.
Signetics

2 **"R6500/R6532 Timer Interrupt Precautions"**
(R6500, R6532)
Discusses solutions to a timer interrupt problem that could occur when using the R6502 and R6532.
Rockwell Document No. R6500 No. 2 (2pp)

3 **"R650X Clock Stretching for Use with Slower Peripherals"**
(R6500)
Discusses a clock stretching scheme that allows slower peripheral devices to operate with the R650X microprocessors. Includes schematic and timing diagrams.
Rockwell Document No. R6500 No. 7 (2pp)

4 **"R6531 Address Lines for Contiguous ROM"**
(R6502, R6531)
Describes an 8-bit μC system using seven R6531's (ROM-RAM-I/O-Counter) and a single R6502. The ROMs are designed to be a contiguous block extending from highest address down. Supplies diagrams and table for address line selection.
Rockwell Document No. R6500 No. 6 (2pp)

5 **"Register-Based Output Functions for RCA COSMAC Microprocessors"**
(CDP1802, CDP1852)
Describes circuits using the CDP1852 I/O port for outputting information from any of the 16 general purpose scratch pad registers of the CDP 1802 microprocessor.
RCA ICAN-6562

6 **"S2000 Family Extended Memory Implementation"**
(S2000)
Shows four method for connecting external memory to members of the S2000 single-chip microcomputer family.
American Microsystems AN-79-2K-01 (3pp)

7 **"SYSTEM 65 to AIM 65 Interface"**
(R6500)
Outlines method of interfacing SYSTEM 65 to AIM 65 using the TTY serial port each has. Diagram and detailed procedure included.
Rockwell Document No. 6500 No. 4 (1pp)

8 **"Single Chip Multiprocessor Arbiter"**
Describes use of Signetics' Field Programmable Logic Sequencer to provide a convenient and cost effective means for implementing a synchronous arbiter, to control system communication with peripherals, by a single chip.
Signetics AN-007 (8pp)

9 **"Software Conversion of Analog Outputs to Analog Inputs"**
(MP10, MP11)
Discusses using the devices as an analog input system with diagrams illustrating hookups to the 6800 and 8080. Includes software program for each processor as well.
Burr Brown AN-88 (4pp)

Systems (cont)

10 **"Software Design for Microprocessors"**
(SBP0400, TMS1000, TMS5501, TMS8080, TMS9900)
Presents basic microprocessor fundamentals. Includes such topics as basic terms, basic machine architecture, instruction sets, and programming. Sample design problems are examined.
Texas Instruments $12.50 (385pp)

11 **"Special Communications Protocol for Multiple PPS-4/1 Systems"**
(PPS-4/1)
Details a communications protocol that can be implemented between two PPS-4/1 microprocessors using only five interface lines.
Rockwell Document No. 29410 No. 21 (2pp)

12 **"Static Memory Systems Utilizing the HM-6100"**
(HM6100)
Describes CMOS, nonvolatile CMOS and NMOS memory systems.
Harris Semiconductor AN-HM004 (7pp)

13 **"TIM Manual"**
(MCS6530)
Describes the program contained in the ROM portion of the 6530-004.
Commodore Semiconductor Group

14 **"TMS 5501 I/O in TMS 8080A μP Systems"**
(TMS5501, TMS8080A)
Describes operation and use of this input/output controller.
Texas Instruments Application Report CA-185A (18pp)

15 **"TMS9900 Family System Design Manual"**
(TMS9900)
Covers the general operation of TI's TMS9900 16-bit family of microprocessors and peripheral support devices.
Texas Instruments Application Report MP702 (120pp)

16 **"The 8080A/9080A MOS Microprocessor Handbook"**
(8080A, 9080A, 8212, 8255, 9555, 8251, 9551)
Provides descriptions of the 9080A CPU and the associated clock generator and system controllers. Supplies data sheet information on various I/O interfaces, support circuits, and memories. An application section covers clock generation, memory system design, timing, interrupts, and multiplication.
Advanced Micro Devices, $7.95 (280pp)

17 **"The AM9511 Arithmetic Processing Unit"**
(AM9511)
Discusses device features and command set. Outlines algorithm and error that can be expected from its use.
Advanced Micro Devices (21pp)

18 **"The AM9517 Multimode Direct Memory Access Controller"**
(AM9517)
Provides device overview and discussion of interfacing device to the system. Include block diagram of sample system and software listings.
Advanced Micro Device (20pp)

19 **"The AM9519 Universal Interrupt Controller"**
(AM9519)
Discusses basic interrupt procedure and device features. Examines hardware interface, operation procedures, command descriptions and system interface as they relate to use of the device.
Advanced Micro Devices (17pp)

MICROPROCESSOR

Systems (cont)

1 **"The ICL7104: A Binary Output A/D Converter for μ Processors"**
(ICL7104, ICL8052)
Describes designing with this 2 device A/D converter in detail. Discusses interfacing with and without handshakes, performance enhancement, and external auto-zero. Includes schematics, block diagrams, and graphs.
Intersil Application Bulletin A030 (14pp)

2 **"The M10800 MECL LSI Processor Family—Three Descriptive Articles"**
(MC10800, MC6800)
Presents three articles about the device: "Get the Best Microprocessor Performance"; "The MSP: GTE Sylvania's Microsignal Processor"; "M10800 Microprogrammed Demonstrator". The first examines features of the processor; the second discusses a customer application; and the third describes a demonstrator treated as a peripheral to the M6800 system.
Motorola AN-776 (21pp)

3 **"Understanding and Using the CDP1855 Multiply/Divide Unit"**
(CDP1855)
Shows how the use of hardware can eliminate complex and slow software routines for performing arithmetic and signal-processing algorithms in 8-bit microprocessor systems.
RCA ICAN-6970 (11pp)

4 **"Use of CMOS RAM CDP1824 with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1824)
Describes the CDP1824 and its application in the CDP18S020 Evaluation Kit, and presents examples of how the CDP1824 can be combined with the CDP1831 ROM to form efficient ROM-RAM systems.
RCA ICAN-6537 (4pp)

5 **"Use of CMOS ROMs CDP1831 and CDP1832 With the RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1831, CDP1832)
Describes the operation and design of CDP1831- and CDP1832-based read-only memory systems in the CDP18S020 Evaluation Kit.
RCA ICAN-6536 (4pp)

6 **"Use of CMOS-SOS RAM CDP1822 with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1822)
Describes the CDP1822, its operation, and its application in the CDP18S020 Evaluation Kit.
RCA ICAN-6539 (4pp)

7 **"Use of the CDP1856 and CDP1857 Buffer/Separator in CDP1802 Microprocessor Systems"**
(CDP1802, CDP1856, CDP1857)
Describes use of the CDP1856 and CDP1857 four-bit buffers or separators in the CDP18S020 Evaluation Kit and CDP18C024 E-K/Assembled-Editor Design Kit. Includes functional diagrams.
RCA ICAN-6657 (4pp)

Systems (cont)

8 **"User Manual for the CDP1802 COSMAC Microprocessor"**
(CDP1802)
Describes the device architecture and its instruction set with examples of each command. Reviews basic programming techniques and supplies timing diagrams.
RCA MPM-201B $5.00 (115pp)

9 **"User's Manual for 8X305 Controller"**
(8X305)
Provides hardware/software details pertaining to the 8X305 microprocessor and its family of supportive parts with emphasis on timing, programming and system interface.
Signetics

10 **"Using Low-Cost 1 MHz Peripherals in a 2 MHz System with the MC68B09 and the MC68B09E"**
(MC68B09, MC68B09E)
Discusses how to minimize system cost by manipulating 2 MHz MPU access time to accommodate slower peripherals and memories.
Motorola Semiconductor AN-836 (7pp)

11 **"Using NSC-800 & 8085 ISE as Automatic Test Equipment"**
(Starplex)
Discusses techniques for using a microprocessor development system and in-circuit emulators for functional tests on production systems.
National Semiconductor SA SPX-AP-7 (16pp)

12 **"Using the 2651 with BISYNC"**
(2651)
Details how the 2651 PCI supports IBM's Binary Synchronous Communications protocol.
Signetics M24 (4pp)

13 **"Using the COSMAC Microboard Battery-Backup RAM, CDP18S622"**
(CDP18S622)
Describes circuits, operation and application of an 8-kbyte, CMOS RAM board with on-board rechargeable batteries.
RCA ICAN-6955 (5pp)

14 **"Z80 Interfacing Techniques for Dynamic RAM"**
(Z80, MK4027, MK4116)
Provides specific examples of interfacing 16-pin dynamic memories to the Z80 microprocessor. Includes timing diagrams and refresh information.
Mostek

15 **"μCOM-43 Single Chip Microcomputer Users' Manual"**
(uCOM-43)
Describes device architecture and specifications. Includes timing diagrams.
NEC Microcomputers (48pp)

16 **"μCOM-44 Single Chip Microcomputer Users' Manual"**
(uCOM-44)
Describes device architecture and specifications. Includes timing diagrams.
NEC Microcomputers (40pp)

17 **"μCOM-45 Single Chip Microcomputer Users' Manual"**
(uCOM-45)
Describes device architecture and specifications. Includes timing diagrams.
NEC Microcomputers (36pp)

©IC MASTER

MICROPROCESSOR

Systems (cont)

1 **"μPD371 Magnetic Tape Cassette/Cartridge Controller Users Manual"**
(uPD371)
Gives description, timing and circuit diagrams. Assembly language listing for use with NEC's 8080A.
NEC Microcomputers $10.00 (58pp)

2 **"μPD372 Mini-Floppy Disk Controller Users Manual"**
(uPD372)
Supplements the Floppy Disk Manual for Mini-Floppy applications.
NEC Microcomputers $10.00 (44pp)

MICROCOMPUTER BOARDS

Applications

1 **"A Microcomputer Industrial Control Interface Using I/O Modules"**
(TM990)
Describes Industrial Control Systems with TM990 Microcomputer Modules and 5MT ac/dc Input/Output Modules.
Texas Instruments Application Report MP 716 (20pp)

2 **"Designing Floppy Disk Systems (and a Sample CP/M Implementation)"**
(BLC-8221, BLC-8222)
Reviews theory of floppy-disk operation and describes how to use a floppy-disk drive with intelligent controller boards.
National Semiconductor SA4-8221/22 (54pp)

3 **"Designing With Memory-Mapped Video Cards"**
Describes the principles involved in designing both hardware and software around the Color-Master Programmable Color Graphics Card, including screen dimensioning, Cursor and Highlighting Control, and custom character sets.
MicroDaSys $25.00 (100pp)

4 **"I/O Application Manual"**
(8P2SM, 4P4S)
Discusses the hardware capabilities of the 8P2SM and 4P4S I/O cards with emphasis on interface to user software. Software test routines are included.
MicroDaSys $25.00 (100pp)

5 **"Introduction to Microprocessors"**
(TM990/u89)
This microprocessor textbook, based on the TM990/u89 University Board, provides an introduction to microcomputers and assembly language programming. Includes many program examples illustrating instructions, programming techniques, and I/O interfacing.
Texas Instruments (MPB30 Rev.*) $19.95 (570pp)

6 **"KIM-1 Microcomputer Model User Manual"**
(KIM-1)
Describes start-up and operating procedures for the KIM-1 Microcomputer Module. Discusses system hardware, system expansion and gives an example of a typical application program.
Commodore (138pp)

7 **"Keyboard Scan Routine for Use with the RCA COSMAC Microterminal CDP18S021"**
(CPD18S021)
Contains the code for a keyboard reading routine which makes the Microterminal useful as a general purpose input as well as output device.
RCA ICAN-6611 (4pp)

8 **"Large System Design With Low Board Count"**
Designing a CP/M based Z-80 system with only two S100 cards is covered in this application manual. The system uses the Super-Z CPU board, which combines Parallel and Serial I/O with 64K of RAM and 2K of PROM on a Z-80 processor card. This board and a Disk Controller form a complete CP/M system.
MicroDaSys $25.00 (100pp)

Applications (cont)

9 **"MD-690A Application Manual"**
(MD-690a, MD-690b)
Details features and capabilities of the MD690a and MD690b S100 based CPU boards. Includes software and hardware applications information for these 6802/6809 processor cards. Monitor listing included to facilitate custom software development.
MicroDaSys $25.00 (100pp)

10 **"MLZ-80 Multi-Processor Feature"**
(MLZ-80)
Describes how to use bus control lines to obtain multiprocessor capability for the MLZ-80 board.
Heurikon Corporation (4pp)

11 **"MLZ-80 System Manual"**
(MLZ-80)
Describes system configuration, I/O device addresses, bus logic, bus timing and I/O connections.
Heurikon Corporation (24pp)

12 **"MLZ-80 and MLZ-81 Configuration Procedures"**
(MLZ-80, MLZ-81)
Outlines the steps required to configure the MLZ-80/81 cards for a particular application.
Heurikon (10pp)

13 **"MLZ-DAQ System Manual"**
(MLZ-DAQ)
Complete description and operating procedures for the MLZ-DAQ. Includes charts and instruction set map.
Heurikon Corporation (22pp)

14 **"Micro-12 User Manual"**
(HB61000-1)
A complete documentation package for the Micro-12 microprocessor system, this manual describes control panel operations, system organization, sample programs, and hardware/software applications.
Harris Semiconductor (204pp)

15 **"Microproducts Hardware Systems Reference"**
(MBC/1, MP100, 8562, 8563)
Describes the Microproducts MP/100 and MP/200 systems. Part I, a hardware systems reference, is designed for engineers and systems programmers. Part II, a troubleshooting guide, is intended for field service engineers.
Data General $25.00 (388pp)

16 **"Millie User Guide"**
(Super Z)
Complete guide to the hardware, software and use of the Millie, a CP/M system based upon the Super-Z single board computer and the Color Master video graphics board.
MicroDaSys $50.00 (200pp)

17 **"Reentrant Programming"**
(TM990)
Describes the use of reentrant software to eliminate the need for providing separate copies of common subroutines for concurrently executing tasks.
Texas Instruments (6pp)

© IC MASTER

MICROCOMPUTER BOARDS

Applications (cont)

1 **"SBC-100 Operations Manual"**
(SBC-100)
Provides product description and details its operation.
SD Systems (38pp)

2 **"Scout Naked Mini 4/04"**
Describes the Scout Computer System incorporating the Naked Mini 4/04 processor. Discusses the basic machine, I/O and peripheral devices, and system software.
Computer Automation (272pp)

3 **"Software Development Using TM990/302 SDB and TIMBER"**
(TM990)
Covers the development of TM990 Series software with a TM990/302 Software Development Module, and TIMBER, a ROM-based executive program.
Texas Instruments Applications Report MP712 (92pp)

4 **"TM990 Analog Modules Applications Report"**
(TM990)
Describes the general operation of the TM990 Serial Analog modules and the software necessary for control.
Texas Instruments Applications Report MP714 (54pp)

5 **"TM990 Microcomputer Handbook"**
(TM990)
Describes the technical features of the TM990 product line. In addition to CPU, Memory and I/O Interface Modules, the book discusses software products, development systems, the TM99 System Bus, and customer support services.
Texas Instruments (207pp)

6 **"TM990/101M EIA Communications Link"**
(TM990)
Describes the development of a software communications link between the TM990 board, a host computer, and an EIA RS232 interface for software development.
Texas Instruments Applications Report MP705 (52pp)

7 **"Technical Notes on Modification, Expansion, and Various Applications of the SYM-1"**
(SYM-1)
Explains how to expand the number of general purpose I/O lines in the SYM-1.
Synertek Systems TNP-1 $3.00 (60pp)

INTERFACE

Converters

1 "3 IC 8-Bit Binary Digital to Process Current Converter with 4-20 mA Output"
(REF-01, DAC-08, OP-14)
Delineates the construction of a process current converter operating from −5v and 23v supplies. Complete theory of operation followed by calibration procedures and a detailed parts list are included.
Precision Monolithics AN-21 (2pp)

2 "A Cookbook Approach to High Speed Data Acquisition and Microprocessor Interfacing"
Shows how to design a complete data acquisition board with multiplexers, programmable gain amplifiers, track and hold, A/D converter, D/A converter, address decoding, read and write timing and interfacing to a microprocessor bus.
Intersil A020 (20pp)

3 "A Digital Multimeter That Measures Frequency Using the 9400 F/V Converter"
(9400)
Shows how to add frequency measurement capability to a low-cost standard DMM by adding an external circuit consisting of a F/V converter, resistors and capacitors.
Teledyne Semiconductor AN-14 (2pp)

4 "A Low Cost, Easy-to-Build Successive Approximation Analog-to-Digital Converter"
(DAC-100, CMP-01)
General discussion of feedback A/D converters. Operation of A/D converter capable of 8-bit conversions in 6 μs. The system is expandable to 10-bit resolution. It uses DAC-100, CMP-01, and a successive approximation register.
Precision Monolithics AN-11 (8pp)

5 "A Low Cost, High-Performance Tracking A/D Converter"
(DAC-100, CMP-01)
Basic operation of 8-bit tracking converter that uses DAC-100 series 10-bit D/A converter, CMP-01 series comparator, and 4-bit MSI up/down counters.
Precision Monolithics AN-6 (8pp)

6 "AD DAC80 Reliability Predictions"
(ADDAC80)
Describes model for calculating predicted failure rate of hybrid circuits per MIL-HDBK-217B and corresponding performance data for device.
Analog Devices (1pp)

7 "AD DAC85 Reliability Predictions"
(ADDAC85)
Presents model for calculating predicted failure rate of hybrid circuits per MIL-HDBK-217B and corresponding device data.
Analog Devices (1pp)

8 "Am6012 12-Bit High-Speed DAC"
(Am6012)
Describes characteristics of a 12-bit DAC and discusses various modes of operations and microprocessor interface considerations.
Advanced Micro Devices LIC-165 (12pp)

Converters (cont)

9 "An Introduction to the Sampling Theorem"
Analyzes the sampling theorem and pitfalls encountered in its application to signal processing systems. Hardware implementation includes discussion of antialiasing filters, S/H circuits and D/A converters.
National Semiconductor AN236 (12pp)

10 "Analog-Digital Conversion Notes"
Covers many aspects of A/D and D/A converters including use, testing and specifying. Extensive applications information includes data systems, acquisition, distribution, communication.
Analog Devices $5.95 (254pp)

11 "Analog-to-Digital Conversion Techniques"
Discusses open-loop and feedback techniques: frequency, pulse width, cascade, ramp, counter, successive approximation, multiple comparison subranging, nonlinear conversion, double and triple ramp conversion.
Motorola AN-471 (21pp)

"Analog-to-Digital Conversion Techniques with the M6800 Microprocessor System"
See listing under (Microprocessor) Systems (Motorola)

12 "Analog-to-Digital Cyclic Converter"
(MC1456)
Discusses circuits and operation of medium speed-medium accuracy converter that uses successive approximation technique in which unknown analog input voltage is successively compared to reference voltage to determine each bit of digital output. A comparison of gray and binary code operation and an error analysis are provided.
Motorola AN-557 (10pp)

13 "Application Circuits of μPC603D, 610D"
(μPC603, μPC610)
Discusses functions and operating principles of each device as well as applications including a digitally programmable power source and a waveform generator.
NEC Electron IEP-543 (24pp)

14 "Application Information for μPC614D"
(μPC614)
Provides application hints and parameters for a pulse width modulation converter in a digital multimeter application.
NEC Electron (6pp)

15 "Applications for the 9400 Voltage to Frequency/ Frequency to Voltage Converter"
(9400)
Contains 25 block diagrams of applications in which the device is used.
Teledyne Semiconductor AN-10 (8pp)

"Applications of a Monolithic Sample-and-Hold/Gated Operational Amplifier"
See (Linear) Amplifiers, Operational (Harris)

© IC MASTER

INTERFACE

Converters (cont)

1 **"Applications of the 8700 Series A/D Converters"**
(8700)
Supplies diagrams showing interface to autoranging circuits, to gas discharge displays, and to two independent displays, operated from one A/D.
Teledyne Semiconductor AN-9 (16pp)

2 **"Applications of the AD537 IC Voltage-to-Frequency Converter"**
(AD537)
Describes device theory and operation. Presents various applications including strain-gauge input, position transducers, and a photodiode input. Block diagrams are provided.
Analog Devies (20pp)

"Applications of the MC1405/MC14435 in Digital Meters"
See listing under (Linear) Instrumentation (Motorola)

3 **"Applications of the ZN425E 8-Bit A-D/D-A Converter"**
(ZN425)
Covers converter definitions, calibration, bipolar operation. Applications: ramp generation, peak detect, channel selection, weighing system, bargraph drive, multiply/divide, and function generation.
Ferranti (31pp)

4 **"Audio Applications for the DAC-76 Companding Converter"**
(DAC-76)
Discusses the multiplying and control characteristics of the DAC-76 in audio applications. High performance digitally-controlled attenuators are featured.
Precision Monolithics AN-28 (8pp)

5 **"Autoranging Digital Multimeter Using the MC14433 CMOS A/D Converter"**
(MC14433)
Describes using the MC14433 A/D converter to build an autorange digital multimeter. The multimeter includes ac and dc voltage ranges from 200mV to 200V, ac and dc current from 2mA to 2A full scale, and resistance ranges from 2 kilohms to 2 megohms full scale.
Motorola AN-769 (5pp)

6 **"Binary D/A Converters Can Provide BCD-Coded Conversion"**
(MC1408, MC1508)
Describes the MC1508 D/A converter used as a 2 or 2½ digit BCD converter. Describes application in a 2½ digit digital voltmeter.
Motorola AN-713 (4pp)

7 **"Build a Low Cost Data Acquisition System with Standard DIPs"**
(MN7130)
Shows how a complete 12-bit, 16-channel data acquisition system can be built by adding a few standard ICs to the MN7130 multiplexed sample/hold amplifier.
Micro Networks AN201 (6pp)

8 **"CMOS A/D Converter Chips Easily Interface to 8080A Microprocessor Systems"**
(ADC3511, ADC3711, INS8080A)
Outlines techniques for interfacing AID converter devices to 8080A μP systems. Includes description of A/D conversion, BCD output capability, flowcharts, schematics, and block diagrams.
National CMOS Databook AN-200 (9pp)

Converters (cont)

9 **"Circuit Applications for a 12-bit ECL DAC"**
(DAC63, MC10176, MC10176, MC10136, MC10101, MCM10149)
Compares operation of TL and ECL D/A converters with respect to data skew, ground currents, line driving and receiving capability; includes discussions on amplitude and phase synthesis and the use of an ECL DAC in a 12-bit, 250ns A/D converter.
Burr-Brown Research AN-105 (6pp)

10 **"Companding Digital-to-Analog Converter"**
(DAC-86, DAC-87)
Discusses how a companding digital-to-analog converter (DAC) is the key component in PCM CODEC Systems.
Precision Monolithics AN-39 (13pp)

11 **"Counter Type A to D Converter"**
(HI1080)
Circuit details of an A to D converter employing a unidirectional digital counter and the HI-1080 eight-bit D to A converter to generate a ramp voltage.
Harris Semiconductor AN-512 (3pp)

12 **"D/A Converter Differential Linearity Error-It Really Shows Up"**
Discusses differential linearity, the difference in analog output for a change between two successive digital input codes. Gives graphs of two examples with the same linearity specification.
Burr-Brown AN-58 (2pp)

13 **"D/A Converter Generates Hyperbolic Functions"**
(DAC-20)
Explains operating theory and design considerations of two IC hyperbolic function generator. Includes circuit diagrams.
Precision Monolithics AN-23 (3pp)

14 **"DAC-08 Applications Collection"**
(DAC-08)
Discusses the dual output, and high compliance. Covers use as a CRT display driver, bridge transducer control system, A/D converter, waveform generator, digital addition/subtraction with analog output, digital attenuator and microprocessor controlled A/D converter.
Precision Monolithics AN-17 (12pp)

15 **"DAC-08 Control of A 555 Timer IC"**
(DAC-08)
Describes a digitally or microprocessed controlled one-shot and an astable multivibrator using two of the low cost building blocks, the DAC-08 and the 555 timer. Digital control ranges of 255 to 1 and 510 to 1 are shown for one-shot and astable applications allowing periods of 18 μsec to 1.4 seconds and frequencies of 1 Hz to 60 kHz.
Precision Monolithics AN-36 (3pp)

16 **"Data Acquisition Handbook"**
(ICL7109, ICL7104, IH8510, ICL7103A, ICL8052A, HDAS-8, HDAS-16, ICH8500, ICL8007, ICL8043, ICL8048, ICL8049, ICL8013, ICL8211, ICL8212, IH5009, IH5025, IH5040, IH5009)
Comprehensive introduction to the principles of data acquisition and conversion, including a compilation of many technical articles published in industry trade journals. Contains detailed application information on D/A and A/D converters, data acquisition systems, samples/hold circuits, op amps, and V/F converters.
Intersil $5.00 (396pp)

INTERFACE

Converters (cont)

"Data Acquisition Networks with NMOS and CMOS"
See listing under (Microprocessors) Applications (Motorola)

1 **"Data Acquisition and Conversion Handbook"**
Discusses data acquisition/conversion principles. With Applications and glossary.
Datel-Intersil $4.95 (250pp)

2 **"Data Conversion Handbook"**
Defines the qualities, specifications, and techniques that combine to give D/A and A/D converters their special character. Also covers sample/hold amplifiers, multiplexers, and coding.
Hybrid Systems Free (175pp)

3 **"Data Conversion Interfacing with the 8080 Microprocessor"**
(8080)
Discusses Analog-to-Digital Conversion (ADC) and Digital-to-Analog Conversion (DAC) and their importance in input/output (I/O) control functions when interfacing with the 8080 Microprocessor. Describes low cost and system simplicity in the versatility of a DAC as it progresses from a μP output device to an ADC input function and finally to its use in a complete Data Acquisition System.
Precision Monolithics, Inc. AN-30 (12pp)

4 **"Data Conversion with Companding DAC Devices"**
Introduces companding principles and use of companding DACs in industrial and PCM transmission systems. Provides companding DAC circuit description and discussion of how μP based data acquisition systems, motion control, audio systems, and telecommunication systems.
Advanced Micro Devices (36pp)

5 **"Designing High Speed Data Acquisition Systems"**
Discusses the basics of data acquisition systems; focusing on A/D converters, sample-and-hold circuits, and multiplexer modules.
Teledyne Philbrick AN-21 (12pp)

6 **"Differential and Multiplying Digital-to-Analog Converter Applications"**
(DAC-08)
Describes use in 2-quadrant, 4-quadrant, 4-quadrant and AC-coupled multiplication. Also covers differential and ratiometric conversion, a nulling bridge circuit, a power monitor, and algebraic computation circuits with analog output.
Precision Monolithics An-19 (8pp)

7 **"Digital Voltmeters and the MM5330"**
(MM5330)
Describes basic counting techniques for building digital voltmeters and shows how the MM5330 can be used in a dual slope system.
National MOS/LSI Databook AN-155 (8pp)

8 **"Digital to Analog Converter High Speed DAC Family"**
(HI562, HI5608, HI5610)
Provides functional and operational diagrams plus descriptions of the devices.
Harris Semiconductor AN-523 (4pp)

Converters (cont)

9 **"Digital to Analog Converter Terminology"**
Explains need to D/A and terms used in specifying it.
Harris Semiconductor AN-522 (3pp)

10 **"Digital to Analog Converter: High Speed ADC Applications"**
Discusses tracking and successive-approximation a/d converter design. Presents a data acquisition system including block diagrams.
Harris Semiconductor AN-524 (3pp)

11 **"Digital-to-Analog Conversion Using the RCA CD4007A COS/MOS IC"**
(CD4007A)
Discusses resistance networks for DAC's and a voltage-follower amp for single-supply operation. Describes a 9-bit COS-MOS DAC.
RCA ICAN-6080 (6pp)

12 **"Digital-to-Analog Converter Applications"**
(HI1080, HI1085)
Operating modes and applications of HI-1080 converter, which features resistor ladder network and switching devices on same chip. Discusses cascaded D to A converter as well as up-down counter and successive approximation A to D converters.
Harris Semiconductor AN-511 (7pp)

13 **"Direct Bus Interfacing using the ZN427/ZN428"**
(ZN427, ZN428)
Describes how A/D and D/A converter chips are interfaced to most popular 8-bit microprocessors. Provides timing diagrams and electrical characteristics.
Ferranti Application Report 14 (9pp)

14 **"Do's and Don'ts of Applying A/D Converters"**
Examines topics concerning proper system design when using A/D converters. Subjects treated include ground loop errors, components, references, capacitive coupling, and thermal effects.
Intersil A018 (2pp)

15 **"Don't Forget D/A Converter Tempco"**
Discusses offset, gain and linearity drift with temperature.
Burr-Brown AN-59 (3pp)

16 **"Exponential Digitally Controlled Oscillator Using DAC-76"**
(DAC-76)
Depicts a 4-IC microprocessor-controlled oscillator with a 8159 to 1 frequency range covering 2.5 Hz to 20 kHz. The circuit uses an exponential current output D/A converter as a programmable current source.
Precision Monolithics AN-20 (3pp)

17 **"FX-209 AP Notes"**
(FX-209)
Describes use of the FX-209 delta modulation analog to digital converter as an AGC amplifier, audio delay line and as an audio scrambler.
Consumer Microcircuits of America (6pp)

© IC MASTER

INTERFACE

Converters (cont)

1 **"Function and Application of 3½ Digit A/D Converter Set"**
(LD110, LD111)
Describes the operation of the LD110 digital processor and the LD111 analog processor. Various DVM circuits are shown including circuits for ratio, current, ac voltage and frequency measurements. A detailed error analysis is provided.
Siliconix AN74-1 (12pp)

2 **"Function/Application of the LD122/LD121A ±4½ Digit A/D Converter Set in Measurement Systems"**
(LD122, LS121A)
Discusses differential measurement techniques, input buffer selection considerations, system layout, grounding methods and troubleshooting in thermocouple, resistance bridge and strain-gage measurement systems using an A/D converter set.
Siliconix AN80-8 (8pp)

3 **"High Speed Digital-to-Analog and Analog-to-Digital Techniques"**
Gives overview that includes voltage and current output D/A, parallel (flash), tracking, successive approximation, and parallel ripple A/Ds as well as nonsynchronous and synchronous VTF A/D. Glossary of terms.
Motorola AN-702 (14pp)

4 **"How to Specify and Test Voltage-to-Frequency and Frequency-to-Voltage Converters"**
Defines device parameters, specifications, and test techniques.
Teledyne Philbrick AN-22 (4pp)

5 **"IC F/V Converters Readily Handle Other Functions, Such as F/V, A/D"**
(RC4151, RM4151)
Describes use of the 4151 as an F/V converter, a V/F converter, and an FSK demodulator.
Raytheon Semiconductor Application Note (6pp)

6 **"Interfacing Precision Monolithics Digital-to-Analog Converters with CMOS Logic"**
(DAC-100, DAC-01)
Analyzes input circuits of these DACs and CMOS interfaces. Describes a complete 10-bit DAC and an 8-bit A/D.
Precision Monolithics AN-14 (4pp)

7 **"Interfacing the AD558 Dacport to Microprocessors"**
(AD558)
Examines considerations for interfacing an 8-bit DAC with the 8080A, 8085A, 8048/8758, 6800/650X and 1802 microprocessors. Example applications include ramp generation and software-controlled analog-to-digital conversion.
Analog Devices (6pp)

"Intrinsically Safe Data Acquisition"
See listing under (Digital) CMOS (Burr-Brown)

8 **"Introduction to Quantized Feedback"**
(LD111A, LD120, LD122, LD130, LD110, LD121A, LD114)
Describes propietary approach to A/D conversion using an analog processor and digital controller and with auto-polarity, auto-zero and ratiometric operation.
Siliconix AN81-2 (10pp)

Converters (cont)

9 **"Low Cost Four Channel DAC gives BCD or Binary Coding"**
(DAC-08, DAC-20)
Describes the construction of a four-channel digital-to-analog converter using four multiplying DACs, a precision quad op amp, a system IC voltage reference, and a DIP-packaged thin-film resistor network.
Precision Monolithics AN-26 (4pp)

10 **"Low Cost, High Speed Analog-to-Digital Conversion with the DAC-08"**
(DAC-08)
Discusses the successive approximation technique to A/D and describes three designs with conversion times of 1, 2, and 4 μsec.
Precision Monolithics AN-16 (7pp)

11 **"Methods for Generating Complex Waveforms and Vectors Using Multiplying D/A Converters"**
(AD7544)
Describes analog waveform synthesis using CMOS multiplying D/A converters, including staircase, triangle and sawtooth waveforms.
Analog Devices (6pp)

12 **"Microprocessor Interface Techniques as Applied to the Siliconix A/D Converter Family"**
(L121A, LD130)
Discusses cost and speed advantages of using A/D converters instead of a peripheral interface device for synchronous or asynchronous interface to a microprocessor.
Siliconix AN81-1 (4pp)

13 **"Microprocessor Interfacing Using the ZN427/ZN428 Data Converters"**
(ZN427, ZN428)
Demonstrates the design of an analog I/O system using A/D and D/A converters with 6800 and 8085A microprocessors. Includes circuit, timing and logic flow diagrams plus example programs.
Ferranti Application Notes 10, 11 and 12 (28pp)

14 **"Microprocessor Interfacing Using the ZN432 10-Bit ADC"**
(ZN432)
Describes a 10-bit A/D converter IC and techniques for interfacing with 8-bit microprocessors using a minimum of external discrete components and standard TTL logic elements.
Ferranti Electric AR-16 (9pp)

15 **"Power D/A Converters Using the IH8510"**
(IH8510, AH8520, IH8521, 7105, 7120)
Discusses the addition of a power amplifier to a D/A converter. Briefly describes use for motor control and programmable power supplies.
Intersil A021 (4pp)

16 **"Principles and Applications of the ICL7660 CMOS Voltage Converter"**
(ICL7660)
Describes operation and application of a monolithic voltage converter that provides a complementary voltage output of −1.5V to −10V with a +1.5V to +10V input.
Intersil A051 (8pp)

INTERFACE

Converters (cont)

1 **"Principles of Date Acquisition and Conversion"**
Discusses basic principles of analog to digital systems including sampling rate, aperture error, accuracy, resolution, throughput, and codes.
Burr-Brown AN-79 (5pp)

2 **"Remote Control Dual Range A/D Converter Using the 7106"**
(7106)
Discusses design of a remote-control, dual-range voltage-measuring circuit using a A/D converter-display driver chip.
Teledyne Semiconductor AN-13 (1pp)

3 **"Repetitive Mode Operation for Models 4109/4111 Integrating A/D Converters"**
(4109, 4111)
Runs through external trigger generator and sure start circuit schemes which are used when the devices must run without ceasing to convert.
Teledyne Philbrick AN-28 (2pp)

4 **"Selecting A/D Converters"**
Compares and contrasts successive approximation and integrating A/D conversion techniques with respect to speed, accuracy, and cost.
Intersil A016 (6pp)

5 **"Serial to Parallel Conversion"**
(MN502, MN5200, MN5210)
Covers timing consideratins in the conversion of A/D converter output from serial to parallel form.
Micro Networks AN-106 (2pp)

6 **"Software Controlled A/D Conversion Using DAC-08 and the 8080A Microprocessor"**
(DAC-08)
Describes software controlled, 8-bit A/D conversion using the DAC-08 and the 8080A. Subjects include I/O interface considerations, I/O control using memory mapping, and a successive approximation A/D conversion algorithm.
Precision Monolithics AN-22 (4pp)

7 **"Solve Your Measurement Problems"**
Discusses V/F and F/V converters and their use in data acquisition problems.
Teledyne Philbrick AN-20 (6pp)

8 **"Specifying and Testing Analog-to-Digital Converters"**
Defines the basic parameters, specifications, and test methods.
Teledyne Philbrick AN-24 (7pp)

9 **"Specifying and Testing Digital-to-Analog Converters"**
Defines basic parameters, specifications and test methods.
Teledyne Philbrick AN-25 (7pp)

10 **"Specifying and Testing Sample-Hold Amplifiers"**
Defines various sample-hold amplifier parameters and outlines methods of testing for them.
Teledyne Philbrick AN-30 (5pp)

11 **"Squeeze High Performance Out of Low-Cost Hybrid Data Converters"**
Lists ways in which converter performance can be improved by the addition of a few external components.
Burr-Brown AN-86 (4pp)

Converters (cont)

12 **"Static and Dynamic Testing of Digital-to-Analog Converters"**
Describes test procedures and equipment for measuring offset, full-scale, gain and linearity errors in DACs. Test equipment discussed ranges from DVMs to automatic testers.
Burr-Brown AN-99 (6pp)

13 **"Strobing the DAC-08 Under Logic Control"**
(DAC-08)
Gives connections for strobing the output of this DAC.
Precision Monolithics AB-1 (1pp)

14 **"Successive Approximation A/D Conversion"**
(MC1408, MC14559)
Describes advances in successive approximation techniques with emphasis on SARs (Successive Approximation Registers.) Shows both a normal and a high speed A/D using these methods.
Motorola AN-716 (8pp)

15 **"The 4151 Voltage to Frequency Converter"**
(RC4151, RM4151, RV4151)
Describes various uses of this v/f and f/v converter.
Raytheon Semiconductor Application Note (8pp)

16 **"The ICL7104—A Binary Output A/D Converter for μ Processors"**
(ICL7104, ICL8052, ICL8068)
Describes the operation of the ICL7104, and either the ICL8052 or ICL8068, as a dual-slope integrating converter.
Intersil A030 (14pp)

17 **"The Integrating A/D Converter"**
Discusses the dual slope technique with considerable attention to error analysis.
Intersil A017 (4pp)

18 **"The Multiplying DAC Application Guide"**
(AD7520, AD7521, AD7522, AS7523, AD7524, AD7525, AD7530, AD7531, AD7533, AD7541)
Discusses applications which take advantage of the MDAC's ability to accept AC or DC references, which can be of either polarity. Applications include digitally-controlled gain and attenuation circuits.
Analog Devices (40pp)

19 **"The OOP-17, OP-16, OP-15 as Output Amplifiers for High Speed D/A Converters"**
(DAC-08, DAC-20, DAC-76, OP-15, OP-16, OP-17)
Illustrates design of high speed, voltage output D/A converters using these devices. Circuit diagrams for high speed, low drift, and low power applications are provided.
Precision Monolithics AN-24 (3pp)

20 **"Tips for Using Single-Chip 3½ Digit A/D Converters"**
(ICL7106, ICL7116, ICL7107, ICL7117, ICL7126)
Provides answers to commonly asked questions regarding A/D converter application in display systems. Includes troubleshooting guide, normal waveforms and equations for component values.
Intersil A052 (8pp)

© IC MASTER

INTERFACE

Converters (cont)

1 **"Understanding the Auto-Zero and Common-Mode Performance of the ICL7103/7107/7109 Family"**
(ICL7106, ICL7107, ICL7109)
Shows how to avoid application problems with differential-input A/D converters having differential reference and separate analog and digital ground references.
Intersil Application Bulletin A032 (8pp)

2 **"V/F's and F/V's: Simple Solutions to Everyday Conversion Problems"**
Examines applications of V/F's and F/V's. Also demonstrates how accuracy can be improved with the addition of more components.
Teledyne Philbrick AN-32 (7pp)

3 **"Voltage Transients (Glitches)"**
(MN3008)
Discusses D/A converter analog voltage spikes appearing in the output following a change of input code.
Micro Networks AN-101 (2pp)

4 **"What Designers Should Know About Data-Converter Drift"**
Examines components of drift as they apply to A/D and D/A converters. Includes discussion of the effect of reference drift and computation of worst case error.
Burr-Brown AN-89 (4pp)

5 **"When Should a Sample Hold Amplifier be Used?"**
Covers the use of sample-hold amplifiers with A/D converters. Discusses use with dynamically changing signals and the droop rate of the sample-hold circuit.
Micro Networks AN-103 (2pp)

Data Transmission

6 **"2661 Operating Mode Switching Procedures"**
(2661)
Covers methods for switching the 2661 Enhanced Programmable Communications Interface from echoplex or remote loop-back mode to normal operation and vice versa.
Signetics AN-402 (1pp)

7 **"A 20-Mbaud Full Duplex Fiber Optic Data Link Using Fiber Optic Active Components"**
(SN74LS40B, MF0D4-02F, MC1733, MC75107)
Describes the design, construction, testing and performance of a TTL-compatible, optical data link. Includes schematic, parts list and printed circuit artwork.
Motorola AN-794 (28pp)

"A COS/MOS PCM Telemetry and Remote Data Acquisition Design"
See listing under (Digital) CMOS (RCA)

"A Typical Data-Gathering and Processing System Using CD4000A-Series COS/MOS Parts"
See listing under (Digital) CMOS (RCA)

Data Transmission (cont)

8 **"An Introduction to the Video Interface System (VIS) Devices - CDP1869 and CDP1870"**
(CDP1869, CDP1870, CDP18S020)
Describes circuit and software for mating a video-interface chip set to the CDP18S020 evaluation kit for assessing chip-set capability in the video portion of a CRT terminal.
RCA ICAN-6953 (11pp)

9 **"Asynchronous Receiver/Transmitter"**
(TR1602, TR1865)
General description of asynchronous transmission and operation of TR1602, which is capable of full or half duplex operation. Describes application in distributed computer networks.
Western Digital Application Report 1 (12pp)

10 **"Binary Synchronous Communications"**
(2661, 2653)
Covers procedures and hardware for implementing character-oriented and bit-oriented protocols in a data communications network.
Signetics TB-4001 (3pp)

11 **"Bussing with MECL 10,000 Integrated Circuits"**
(MC10111, MC10123)
Describes use of MECL 10,000 circuits in high speed data transmission systems with emphasis on transmission line construction and termination.
Motorola AN-726 (6pp)

12 **"Convolution: Digital Signal Processing"**
Discusses the Impulse function and its effect on linear systems in terms of the fundamental convolution theorem. Analytical and illustrative examples.
National Semiconductor AN237 (8pp)

13 **"Data Bus and Differential Line Drivers and Receivers"**
(DS7820, DS7830, DS7831, DS7832, DS7833, DS7834, DS7835, DS7836, DS7837, DS7838, DS7839, DS8820, DS8830, DS8831, DS8832, DS8833, DS8834, DS8835, DS8836, DS8837, DS8838, DS8839, DS1488, DS1489)
Includes schematics and describes the operation of these line drivers, receivers and transceivers.
National AN-83 (12pp)

14 **"Data Comm Async and Sync Transmission"**
(2661, 2652, 2681)
Reviews fundamental considerations and describes controller chips for implementing synchronous and asynchronous data transmission.
Signetics TB-4004 (3pp)

15 **"Data Comm Error Control"**
(2652, 2653, 2661)
Describes chip set for implementing error control at system protocol levels in data communication systems.
Signetics TB-4003 (3pp)

16 **"Data Comm Protocols"**
(2652, 2653, 2661)
Discusses procedures, conventions and hardware governing data transfer between data-processing machines.
Signetics TB-4000 (2pp)

INTERFACE

Data Transmission (cont)

1 **"Device Operation and System Implementation of the Asynchronous Communications Interface Adapter"**
(MC6850)
Provides information on ACIA transmitter and receiver operation, initialization, status register bits, use in a microcomputer based communications system, software requirements, and transmission subroutines.
Motorola AN-754 (11pp)

2 **"Digital Data Comm Message Protocol"**
(2652, 2661, 2653)
Covers operating modes, format, control set, error detection and recovery, and implementation of message protocols.
Signetics TB-4005 (3pp)

3 **"Eight Channel Codec Demonstrator"**
Explains how a codec demonstrator system is used to provide a working digital transmission system incorporating eight analog input channels digitally interfacing to eight output channels.
Precision Monolithics AN-37 (8pp)

4 **"Four-Channel Shared Codec"**
(DAC-86, DAC-87)
Describes a four-channel CODEC assembled from LSI components as a cost-effective digital transmission system requiring a relatively small number of devices. The system makes use of a single COMDAC® companded DAC-86 or DAC-87 digital-to-analog converter for both encoding and decoding.
Precision Monolithics AN-38 (6pp)

5 **"High Speed Digital Communications"**
(HD245, HD246, HD545, HD546)
Describes the use of the HD-245 family in a current mode digital communication system (up to 2 Mbs over 1,000-ft-long line.)
Harris Semiconductor AN-205 (4pp)

6 **"Integrated Circuits for Digital Data Transmission"**
(DS7820, DS7830, DS8820, DS8830)
Describes the operation and use of the DS7830 line driver and DS7830 line receiver for transmission systems using twisted-pair lines. Includes a mathematical design analysis of this line receiver.
National Special Functions Databook AN-22 (16pp)

"Intrinsically Safe Data Acquisition"
See listing under (Digital) CMOS. (Burr-Brown)

7 **"Line Drivers and Receivers"**
(AM2614, AM2615)
Discusses single ended, differential, unbalanced differential digital communications systems and line matching methods. Describes the above circuits and their use in systems.
Advanced Micro Devices (12pp)

8 **"Low Speed Modem Fundamentals"**
(MC6860)
Describes interface circuitry and performance of the MC6860 low speed modem. Evaluation of the system performance in the presence of Gaussian noise is given, as well as a brief description of data couplers.
Motorola AN-731 (15pp)

Data Transmission (cont)

9 **"Low Speed Modem System Design Using the MC6860"**
(MC6860)
Describes the MC6860 modem. Provides filter design tables and equations to develop a complete 100 series compatible system.
Motorola AN-747 (13pp)

10 **"Mixed Data Link Extends Length, Reduces Cost"**
(3712R, 3713T)
Describes how to use a fiber-optic transmitter and receiver to form a fiber-optic data link for extending link length or reducing link cost. Provides a performance chart for comparing various cable types.
Burr-Brown AN-97 (4pp)

11 **"Monolithic Bipolar Circuits for Video Speed Data Conversion"**
(TDC1007J, TDC1016J)
Describes the "flash" A/D converter, TDC1007J, and the TDC1016J, D/A converter. Also included are appoaches for extending the performance of the TDC1007J.
TRW/LSI A-5

12 **"Operation of the MC14469"**
(MC14469)
Discusses the operation of an addressable asynchronous receiver transmitter and its application in control of remote devices, transfer of data on a shared wire, and as an interface from remote sensors to a central processor.
Motorola AN-806 (8pp)

13 **"Operational Aspects of Nitron's Data Terminal Transmitter and Receiver"**
(NC2257, NC2259, NC2260)
Discusses basic operation of the NC2257/2259/2260 IC's, and application in various types of communications systems.
Nitron Communications Note 1 (24pp)

14 **"Receiver/Transmitter Noise Immunity"**
(HD245, HD246, HD545, HD546)
Discusses HD-245 transmitter/receiver system noise: External magnetic and capacitive effects, crosstalk, and ground line noise. Includes a comparison with voltage mode and differential voltage switching type systems.
Harris Semiconductor AN-207 (4pp)

15 **"Remote Multiplexing"**
Discusses acquisition of data at sensors distant from the location where the data is required and the control of actuators at a distance from the control system. Topics include interconnection, data transmission integrity, temperature, and electrical and mechanical protection.
Burr-Brown AN-80 (6pp)

16 **"Revised Data—Interface Standards"**
(MC3486, MC3487, MC3488)
Compares RS232, RS422, and RS423 standards and discusses cable length.
Motorola AN-781 (4pp)

17 **"Stable FSK Modems Featuring the XR-2207, XR-2206, and XR-2211"**
(XR2206, XR2207, XR2211)
Describes designing a modulator-demodulator for use in frequency-shift keying. Circuit designs and the adjustment procedure for frequency tuning is included.
Exar AN-01 (5pp)

© IC MASTER

INTERFACE

Data Transmission (cont)

1 **"Successive Approximation Register Design for Multi-Channel Codec's"**
Explains a low cost, high speed Successive Approximation Register (SAR) design for use with 24-channel or 32-channel encoders.
Precision Monolithics AN-31 (4pp)

2 **"Synchronous Data Link Control (SDLC)"**
(2652)
Reviews protocols used in data communications networks; discusses message format, error detection and the operation of a controller chip.
Signetics TB-4002 (4pp)

3 **"The UAR/T in Data Communications"**
(AY5-1013)
Describes this full duplex receiver/transmitter and discusses its application in computer, terminal and slow speed device interfacing. Also covers use in polling.
General Instrument (4pp)

4 **"Transmission Line Characteristics"**
(DM7400, DS7820, DS7830, DS75452, DS8820, DS8830)
Describes the characteristics of digital signals in transmission lines and the characteristics of the line that effect transmission quality. Also compares the performance of unbalanced and balanced circuits in digital systems.
National Interface Databook AN-108 (6pp)

5 **"Transmission Line Drivers and Receivers for RS-422 and RS-423"**
(9636A, 9637A, 9638)
Reviews requirements of EIA standards RS-422 and RS-423 for interfacing data terminals and data-communications equipment with transmission live drivers and receivers. Describes theory and application of Schottky driver and receiver circuits. Circuit diagrams, performance curves and tables, and system design assistance are provided.
Fairchild Application Note 354 (16pp)

6 **"Transmission and Multiplexing of Analog or Digital Signals Utilizing the CD4016A Quad Bilateral Switch"**
(CD4016A)
Describes features and operation of this switch. Discusses applications, including switching, gating digital or analog signals, multiplexing and demultiplexing, D/A conversion, sample and hold, and squelch-control.
RCA ICAN-6601 (12pp)

7 **"Tri-State FSK Modem Design Using XR2206/XR2211"**
(XR2206, XR2211)
Design of FSK modems with carrier detection and control capability are discussed.
Exar AN-05 (6pp)

8 **"Use of the AM26LS29, 30, 31, and 32 Quad Driver/Receiver Family in EIA RS-422 and 423 Applications"**
(AM26LS29, AM26LS30, AM26LS31, AM26LS32)
Reviews use of the devices in implementing RS-422 and 423 with emphasis given to the EIA RS-422 balanced interface.
Advanced Micro Devices (12pp)

Data Transmission (cont)

9 **"Using the 2653 Polynomial Generator and Checker"**
(2653)
Describes techniques and hardware for monitoring parallel data transfer between a CPU or memory and a serial receiver/transmitter or other bus oriented device.
Signetics AN-400 (16pp)

10 **"Using the 2670/71/72/73 CRT Terminal Chip Set"**
(2670/71/72/73)
Reviews major elements of a CRT terminal and covers the application of a display character and graphics generator, a programmable keyboard and communication controller, a programmable video timing controller and a video and attributes controller.
Signetics AN-401 (16pp)

Drivers

11 **"7106/7107 Digital Meter Applications"**
(7106, 7107)
Presents diagrams, circuit board design, test information and sources of supply for building LED or LCD digital meters around display driver ICs.
Teledyne Semiconductor AN-11 (6pp)

12 **"A Single IC Digital Thermocouple Thermometer Using the 7106"**
(7106)
Describes design and application details of a thermometer circuit built around a display driver and for use with type J and K thermocouples.
Teledyne Semiconductor AN-12 (2pp)

13 **"CMOS Line Drivers"**
States reasons for using CMOS line drivers.
National AN-158 (4pp)

14 **"Driving 7-Segment Gas Discharge Display Tubes with National Semiconductor Circuits"**
(DS8880, DS8884A, DS8885, DS8887, DS8889, DS8980, DS8981)
Explains each of the device's characteristics and operation. Application circuit diagrams also supplied.
National Interface Databook AN-84 (4pp)

15 **"Driving 7-Segment LED Displays with National Semiconductor Circuits"**
(DM5446A, DM5447A, DM5448A, DM7446A, DM7447A, DS75491, DS75492, DS7856, DS7858, DS8856, DS8857, DS8858, DS8861, DS8863, DS8864, DS8865, DS8866)
Discusses configurations and construction of 7-segment LEDs and drive modes. Describes BCD to 7-segment decoder drivers, BCD to 7-segment LED drivers, MOS to LED segment drivers, four and five segment drivers, as well as digit drivers. Describes calculator and digital clock applications.
National AN-99 (12pp)

16 **"Driving Burroughs' Bar Graph Display"**
Shows the use of comparators and flip-flops to drive these displays.
National DB-4 (2pp)

INTERFACE

Drivers (cont)

1 **"Expanding the Frontiers of IC Interface for Electronic Displays"**
Presents interface IC basics concerning incandescent, gas discharge, LED, plasma, fluorescent, and hot wire displays.
Sprague Electric AN29304.9 (10pp)

2 **"Interface Considerations for Numeric Display Systems"**
(MC14511, MC14543)
Gives basic information on LDC, LED, gas discharge, fluorescent and incandescent displays. Discusses interfacing 7 segment displays to logic with emphasis on multiplexed systems.
Motorola AN-741 (25pp)

3 **"Line Driver and Receiver Considerations"**
(MC1488, MC1489, MC3486, MC3487, MC3488, MC10194, MC75107, MC75110)
Discusses line driver and receiver related topics including system description, definition of terms, important parameter measurements and application example.
Motorola AN-708A (18pp)

4 **"MOS Clock Drivers"**
(MH0007, MH0009, MH0012, MH0013)
Lists the characteristics of various MOS clock drivers and how they differ in their input stages.
National Special Functions Databook MB-9 (2pp)

"PIN Diode Drivers"
See listing under (Interface) Switches. (National)

5 **"Self-Scanned Cascade Readout of the LS7060 and LS7061"**
(LS7060, LS7061)
Describes two 32-bit binary counter-latch-output driers and their use in system-oriented pulse counting applications.
LSI Computer Systems (3pp)

6 **"Series ULN-2000A Darlington Transistor Arrays-Description and Application"**
(ULN-2001A, ULN-2002A, ULN-2003A, ULN-2004A)
Describes circuit capabilities and its use as an interface.
Sprague AN29304.9 (7pp)

7 **"Simple Voltmeter Monitors TTL Supplies"**
(LM3914)
Explains how to use a bar/dot display driver chip, a few resistors and some LEDs to make a simple expanded-scale voltmeter that runs on 5V and provides TTL undervoltage and overvoltage warning signals.
National Semiconductor Linear Brief 48 (2pp)

"Using the MM5704 Keyboard Interface in Keyboard Systems"
See listing under (Digital) Encoders (National)

Encoders

8 **"60 Key Keyboard Encoder Applications Note"**
Describes implementation of keyboard scanning, key debouncing, key encoding, and key data availability indication functions.
Signetics AN-002 (8pp)

Encoders (cont)

9 **"A Single Channel Codec Integrated Circuit"**
(ZNPCM1)
Includes tables of recommended operating conditions, electrical characteristics and pinouts for 24-pin DIP codec. Single-channel, 30-channel, and switching application examples includes circuit and timing diagrams.
Ferranti (15pp)

10 **"AY5-3600 Keyboard Encoder Operation"**
(AY5-3600)
Characterizes the device and supplies a chart of the code assignments it uses.
General Instrument Bulletin 1402 (3pp)

11 **"Asynchronous Communications Interface Adapter"**
(SY6551)
Discusses transmitter and receiver operation, status register operations, programmed reset functions, generation of non-standard baud rates and diagnostic loop-back operating modes of the SY6551.

12 **"Control Circuits for LED Scales with Linear and Logarithmic Behavior"**
(U237B, U247B, U257B, U267B)
Discusses circuit design for driving up to 10 LEDs in a linear or logarithmic bar display. Includes suggestions for using various colors for emphasizing selected parts of the display.
AEG-Telefunken Halbleiter Informationsdienst 8.78 (3pp)

13 **"Designing with the HD-0165 Keyboard Encoder"**
(HD0165)
The organization and truth table for this encoder are presented. The use of two circuits for encoding up to 256 keys, battery operation, examples of a teletypewriter keyboard and universal keyboard encoders are described.
Harris Semiconductor AN-204 (8pp)

14 **"ED Family of Remote Control Encoder/Decoders"**
(ED-5, ED-9, ED-11, ED-15)
Describes how to incorporate the ED-15, ED-11, ED-9, and ED-5 into user's system. Contains information covering various transmission media, as well as using ED with microprocessor interface.
Supertex 1 (9pp)

15 **"Exclusive-OR Code Converters"**
(DM7086)
Covers use of exclusive-OR gates to do Gray/Binary and Binary/Hamming code conversion.
National DB-2 (2pp)

16 **"Interface Circuitry and Performance Optimization TMX2141 Encoder, TMX2151 Decoder"**
(2141, 2151)
Provides design notes including pulse width and timing considerations for these pulse width signaling devices.
TMX Bulletin 751 (7pp)

17 **"Keyboard Encoder and PROM/EPROM Application"**
(AY5-3600)
Describes use of the device in 64 key 4 mode and 90 key 4 mode applications. The device's binary outputs are organized to provide direct interface with a PROM/EPROM thus enabling the specific pattern format to be verified prior to a "custom" encoder commitment.
General Instrument Bulletin 1401 (4pp)

©IC MASTER

INTERFACE

Encoders (cont)

1 **"Using the MM5704 Keyboard Interface in Keyboard Systems"**
(MM5704)
Discusses features, operation, and programming of this device. Discusses use with the MM5702 timing and control chip of the Microprogrammable Arithmetic Processing System, and in a standard ASCII encode system.
National AN-52 (11pp)

MOS/Bipolar

"Applications of the RCA CD4093B COS/MOS Schmitt Trigger"
See listing under (Digital) CMOS (RCA)

2 **"COS/MOS Interfacing Simplified"**
(CD4000 Series)
Covers interfacing 4000A and B series with TTL, DTL, ECL, NMOS, PMOS, industrial and power control circuits, op amps and displays.
RCA ICAN-6315 (7pp)

3 **"Combining HNIL and CMOS—An Optimum Design Technique"**
(300 Series)
Discusses noise immunity, HNIL/74C interface, Schmitt trigger input and high current output.
Teledyne Semiconductor Digital Catalog (3pp)

"Interfacing COS/MOS with Other Logic Families"
See listing under (Digital) CMOS (RCA)

"Interfacing with CMOS"
See listing under (Digital) CMOS (Solid State Scientific)

4 **"MM54C/MM74C Voltage Translation/Buffering"**
(MM54C901, MM54C902, MM54C903, MM54C904, MM74C901, MM74C902, MM74C903, MM74C904)
Interfacing PMOS to CMOS, CMOS to CMOS with different voltage levels, and CMOS to two standard TTL loads, are illustrated using 74C901 series devices.
National MB-18 (2pp)

5 **"TTL to MOS and MOS to TTL Interface Circuits"**
(SN7400, SN5107, SN75207, SN75270, SN75370, SN75450, SN75451, TMS1103, TMS4062)
Describes MOS/TTL interface circuits using bipolar transistors, JFETs, MOSFETs, and ICs.
Texas Instruments Applications Report CA-170 (11pp)

6 **"TTL/MOS/DTL Interfaces"**
Techniques for coupling the above devices and characteristics of the interfaces.
National MB-7 (2pp)

MOS/Bipolar (cont)

7 **"Using Bipolar Logic to Improve Performance in CMOS and Microprocessor Systems"**
Suggests the use of HiNIL for improving noise performance, input protection, and output drive, and of LP Schottky for improved speed/power.
Teledyne Semiconductor Digital AN-7 (4pp)

Multiplexers

8 **"Single Supply Operation of PMI Multiplexers"**
(MUX-08, MUX-16, MUX-24, MUX-28, MUX-88)
Explains single supply operation as it applies to BIFET and CMOS multiplexers. Common applications are in microprocessor-based, single supply data acquisition systems.
Precision Monolithics AN-32 (2pp)

9 **"Understanding Crosstalk in Analog Multiplexers"**
Explains the three crosstalk components, Satic (CT), Dynamic (DCT), and Adjacent Channel (ACCT) qualitatively and quantitively. The discussion tells what component(s) should be considered in various applications. The qualitative discussion uses both theoretical and empirical information to arrive at conclusions about what performance should be expected.
Precision Monolithics AN-35 (8pp)

Switches

10 **"A New CMOS Analog Gate Technology"**
General discussion of "latch up." Describes "floating body" process, which eliminates this problem.
Intersil AN-A006 (2pp)

11 **"A New J-FET Structure—the VARAFET"**
(IT401, IT401A)
Lists advantages of an integrated J-FET switching circuit. Covers cell structure, electrical characteristics and device operation.
Intersil Application Bulletin AO22 (4pp)

12 **"Analog Switches and Their Applications"**
Introduces basic semiconductor theory and discusses in detail FET analog switches. Various circuit combinations including driver cicuits, multiplexing, sample-and-hold circuits, N-path filters, and converters are also analyzed.
Siliconix $7.95 (324pp)

13 **"Analog Switches in Sample and Hold Circuits"**
Covers the effects of FET analog switch current handling capability on settling time and the effects of offset characteristics on sample and hold system accuracy. Describes inverting and non-inverting sample and hold circuits.
Siliconix AN74-2 (4pp)

14 **"Analog-Signal Commutation"**
(MM450, MM451, MM454, MM550, MM551, MM552)
Describes dc characteristics involved in MOS IC switching of analog signals when the signal input range varies between ± 10 v.
National Special Functions Handbook AN-33 (6pp)

INTERFACE

Switches (cont)

1 **"Application of the MC3416 Crosspoint Switch"**
(MC3416)
Describes operation and use of this 4 X 4 balanced cross point switch in telephone applications including PABX. Appendices cover dielectric isolation, SCR action and testing.
Motorola AN-760 (15pp)

2 **"Applications of MOS Analog Switches"**
(LH0014, LH0019)
Discusses basic commutation circuits and describes the use of the LH0014 and LH0019 in linear amplifier applications, including reset functions and chopper circuits. Covers use of MOS switches as suppressed carrier double-sideband modulators and double-side-band demodulators. Also describes a circuit for a phase-locked loop AM-FM detector without tuned circuits.
National Special Functions Databook AN-38 (8pp)

3 **"CMOS Analog Switches—A Powerful Design Tool"**
Describes CMOS switch construction, characteristics and operating precautions. Applications include: a four channel switch to multiplex a scope input, a low pass filter with digitally controlled frequency response, an amplifier with programmable inputs and gain, a sample and hold circuit, a latching switch, high frequency switching and multiplexer systems.
Siliconix AN75-1 (16pp)

4 **"Designing with Monolithic FET Switches"**
Describes MOSFET and JFET switch operation, including driver consideratins.
Siliconix TA73-2 (4pp)

5 **"Driver Circuits for the JFET Analog Switch"**
Discussion and comparison of resistor-coupled diode charge transfer, space transistor charge transfer, and switched resistor driver circuits for JFET switches.
Siliconix AN73-5 (12pp)

6 **"Electronic Switches in NMOS - Silicon Gate Technology"**
(U353M, U354M)
Lists performance parameters for NMOS siligon-gate transistor arrays of up to 5 devices for use as a relay replacement. Includes discussions on electrical principles and large signal operation.
AEG-Telefunken Halbleiter Informationsdienst 11.78 (6pp)

7 **"FETs as Analog Switches"**
General discussion of FET operation: detailed discussion of factors affecting switch performance, including specific load problems and applicable driver circuits.
Siliconix AN72-2 (12pp)

8 **"Features and Applications of RCA IC Zero-Voltage Switches"**
(CA3058, CA3059, CA3079)
Discusses zero-voltage switch operation in general. Operation primarily with thyristors in ac power control and switching applications, including electric heating, oven/broiler control, machine control, light control and industrial systems.
RCA ICAN-6182 (6pp)

Switches (cont)

9 **"High Speed Analog Switches"**
(AM1000, AM1001, AM1002)
Discusses time domain multiplexing, current mode multiplexing, the switching characteristics of the AM1000 JFET switches, and drive circuits.
National AN-53 (6pp)

10 **"High Speed MOS Commutators"**
(MM451, MM453, MM454)
Discusses the lowered threshold voltages in commutators, on and off resistances, switching speed, noise and high-frequency noise control.
National Special Functions Databook AN-28 (8pp)

11 **"IC Multiplexer Increases Analog Switching Speeds"**
(DG506, DG181)
Describes single and two level IC multiplexing systems, including the advantages and disadvantages of each.
Siliconix AN73-2 (5pp)

12 **"PIN Diode Drivers"**
(DH0035, DH003C)
Describes PIN diode switching requirements and application of DH0035 as a driver. Includes discussion of anode ground and cathode ground designs and of repetition rate considerations.
National Special Functions Databook AN-49 (6pp)

"Some Applications of Programmable Power Switch/Amplifier"
See listing under (Linear) Power Control (RCA)

13 **"Specifying and Testing Multiplexers"**
Describes how Teledyne Philbrick defines and measures analog multiplexer parameters with emphasis on CMOS types.
Teledyne Philbrick Applications Bulletin AN-31 (4pp)

14 **"Switching High-Frequency Signals with FET Integrated Circuits"**
(DG133, DG171, DG181, DG200)
Discussion of DG133/171/181/200 as rf switches. Gives equivalent circuits. "Off" isolation and "On" performance data. Applications: control of video monitor and switching between two video cameras.
Siliconix AN73-3 (16pp)

15 **"The IH5009 Series of Low Cost Analog Switches"**
(IH5009 Series)
Describes circuit parameters, logic compatibility, and virtual ground switching applications including 4-channel multiplexer, gain ranging circuit, gain programmable amplifier and 16-channel multiplexer.
Intersil Application Bulletin A0004 (8pp)

16 **"Understanding and Applying the Analog Switch"**
(IH5001, IH5009, IH5025, IH5040)
Compares parameters of analog switches. Applications of several switch families are discussed, including 3-channel differential multiplexer, gain programmable amplifier, gain ranging circuit, sample and hold circuit.
Intersil Application Bulletin A003 (16pp)

© IC MASTER

INTERFACE

Switches (cont)

1 "Zero Voltage Switch"
(U106)
Discusses the feaures of the U106 Triac control circuit. Provides diagrams, schematics, and temperature control, timer, and static switch applications.
AEG-Telefunken (12pp)

LINEAR

Active Filters

1 **"Active Filter Design with IC OP Amps"**
(XR3403, XR4136, XR4202, XR4558)
Provides table of transfer functions and equations for low, high and bandpass filters as well as filter responses for Bessel, Butterworth and Chebychev types. Working schematic of an active filter in a modem application included.
Exar AN-03 (8pp)

"Function Circuits, Design and Applications"
See listing under (Linear) General (Burr-Brown)

Amplifiers, Current

2 **"Application of the LH0002 Current Amplifier"**
(LH0002)
Circuit operation. Describes uses in a differential input-output op amp, booster amplifier, level shifter, pulse transformer driver, and transmission line driver.
National Special Functions Databook AN-13 (4pp)

Amplifiers, Instrumentation

3 **"A User's Guide to IC Instrumentation Amplifiers"**
(AD522)
Explains where and when an instrumentation amplifier may best be employed. Provides basic theory, specifications and examples of use.
Analog Devices (12pp)

4 **"Application of the RCA CA3000 Integrated-Circuit DC Amplifier"**
(CA3000)
Describes circuit and application as modulated oscillator, crystal oscillator, low-frequency mixer, cascaded RC-coupled feedback amp, narrow-band tuned amp, and Schmitt trigger.
RCA ICAN-5030 (11pp)

5 **"Applications of Wide-Band Buffer Amplifiers"**
Describes high and low frequency operation of several wide-band, high-current, unity-gain buffer amplifiers. Discusses application techniques and illustrates their use in driver, sample and hold amplifier, and active filter circuits.
National Semiconductor AN227 (16pp)

6 **"Instrumentation Amplifiers—Versatile Differential Input Gain Blocks"**
(3660)
Describes the feaures and general operation of instrumentation amplifiers. Depicts their use in bridge circuits, in reducing ground loop interference, and in driven guard input circuits.
Burr-Brown AN-75 (6pp)

Amplifiers, Instrumentation (cont)

7 **"Isolation and Instrumentation Amplifiers Designers Guide"**
Primer on the operation, application, and selection of isolation and instrumentation amplifiers.
Analog Devices (20pp)

8 **"OP-10 Instrumentation Amplifier CMRR Versus Frequency Improvement"**
(OP-10)
Discusses optimization of CMRR versus frequency response of a three op amp instrumentation amplifier.
Precision Monolithics AB-2 (1pp)

9 **"Optical Coupling Extends Isolation-Amplifier Utility"**
(3450, 3650)
Explains isolation amplifier fundamentals, optical coupling, and use of the amp in medical electronics and industrial motor control.
Burr-Brown AN-85 (8pp)

10 **"Testing of Analog-to-Digital Converters"**
Discusses methods, circuits and instruments for testing accuracy of A/D converters with conversion times under 100μs; includes a circuit for testing high-speed converters with less than 10μs conversion times.
Burr-Brown Research An-100 (6pp)

11 **"The Instrumentation Amp vs the Op Amp; Which, Where, and How to Use Them"**
Compares an op amp connected as a differential amp with an instrumentation amp built from several general purpose op amps. Discusses how to put each one together, and when and where to use them.
Teledyne Philbrick AN-29 (6pp)

Amplifiers, Operational

12 **"A High Impedance Hysteresis Circuit"**
(HA-2520, HA-2620)
Describes HA-2520/HA-2620 used as a hysteresis amplifier and covers output voltage limiting.
Harris Semiconductor AN-505 (2pp)

13 **"A Simple Comparator Using the HA-2620"**
(HA-2620)
Describes op amp comparator circuit capable of driving approximately ten logic gates.
Harris Semiconductor AN-509 (1pp)

14 **"A Simple Square-Triangle Waveform Generator"**
(HA-2510, HA-2600, HA-2620)
Circuit for waveform generator using three op amps.
Harris Semiconductor AN-510 (2pp)

15 **"An IC Amplifier User's Guide to Decoupling, Grounding, and Making Things go Right for a Change"**
Contains considerable information on good grounding practices and op amp decoupling.
Analog Devices (8pp)

©IC MASTER

LINEAR

Amplifiers, Operational (cont)

1 **"An IC Operational-Transconductance-Amplifier (OTA) with Power Capability"**
(CA3094)
Describes what an OTA is and the characteristics of the device. Outlines its use in such consumer applications as a power amplifier and a companion RIAA preamplifier.
RCA ICAN-6077 (12pp)

2 **"Analysis and Design of the Op/Amp Current Source"**
Develops expressions for the transfer function and output impedance of voltage controlled op amp current source using both ideal and non-ideal models. Discusses effects of parameter and temperature variations on performance.
Motorola AN-587 (7pp)

3 **"Application of the RCA CA3008 and CA3010 Integrated-Circuit Operational Amplifiers"**
(CA3008, CA3010)
Describes operating characteristics of two op amps and their application in video amplifiers, frequency-shaping amplifiers, comparators, integrators, differentiators, scaling adders. Also covers the addition of a power output stage and/or input emitter followers.
RCA ICAN-5015 (15pp)

4 **"Application of the RCA CA3015 and CA3016 Integrated-Circuit Operational Amplifiers"**
(CA3015, CA3016)
Describes operating characteristics at ±12 v. Applications covered are: 50-dB amplifier; twin-T bandpass amplifiers, 20-dB, 10 MHz bandpass amplifier; and voltage follower.
RCA ICAN-5213 (6pp)

5 **"Applications of Operational Amplifiers"**
Presents op amp applications including designs for signed controls, processors, waveform generators, and special purpose circuits. Provides information on error sources, circuit values, and design equations.
Burr-Brown $29.50 (220pp)

6 **"Applications of a Monolithic Sample-and-Hold/Gated Operational Amplifier"**
(HA-2420, HA-2425)
Describes HA-2420/2425 circuit. Applications include various track-and-hold/sample-and-hold configurations, an A/D converter, a demultiplexer, an integrated-hold-reset amplifier, a gated operational amplifier, and a peak detector with reset.
Harris Semiconductor AN-517 (8pp)

7 **"Applications of the CA3080 and CA3080A High-Performance Operational Transconductance Amplifiers"**
(CA3090, CA3080A)
This device has an additional control terminal for flexibility. Circuit operation is discussed. Applications covered: communications and industrial systems, modulators, multiplexers, sample and hold circuits, gain control circuits, and micropower comparators. Appendix discusses current mirrors.
RCA ICAN-6668 (16pp)

Amplifiers, Operational (cont)

8 **"Applications of the Gated Linear Amplifier ZN424"**
(ZN424)
Details the operation of the ZN424 and describes a variety of specific applications including filters, comparators, and peak hold circuits.
Ferranti (46pp)

9 **"Applications of the RCA CA3048 Integrated Circuit Amplifier Array"**
(CA3048)
Discusses operating parameters for this 4-amplifier array and covers applications, including Hartley and Colpitts oscillators, an astable multivibrator, four-channel linear mix, and a gain-controlled amplifier.
RCA ICAN-4072 (8pp)

10 **"Applying Dual and Quad FET Op Amps"**
(LF347, LF353)
Shows how dual and quad FET op amps can be used as a temperature controller, high-temperature thermometer, sine wave oscillator, voltage reference, A/D converter and current amplifier.
National Semiconductor AN-262 (7pp)

11 **"Applying a New Precision Op Amp"**
(LM11)
Details characteristics of the LM11 which combines low offset voltage with low bias current. Applications include meters, differential instrumentation amplifiers and coupling with existing fast op amps.
National Semiconductor AN242 (16pp)

12 **"Circuit Design with the Photon-Coupled Interrupter Modules CNY36 and CNY37"**
(TAA861)
Describes how a photocoupler module is combined with an operational amplifier to actuate a relay upon interruption of an infrared light beam.
AEG-Telefunken Halbleiter Informationsdienst 5/76 (4pp)

13 **"Combine Two Op Amps to Avoid the Speed Accuracy Compromise"**
(3521)
Discusses interconnecting low drift and wideband op amps to form a composite op amp.
Burr-Brown AN-64 (2pp)

"D.C. Servo Motor Systems Using the ICH8510"
See listing under (Linear) Amplifiers, Power (Intersil)

14 **"Design of a Unique Precision Controlled Current Source"**
(3500)
Diagrams a current source using an op amp and a complementary FET pair to form a current source with differential input and bipolar current output.
Burr-Brown AN-74 (2pp)

15 **"Designing Junction FET Input Op Amps"**
(U401, 421 Series)
Discusses the advantages, behavior and design of JFET input operational amplifiers.
Siliconix AN74-3 (17pp)

LINEAR

Amplifiers, Operational (cont)

1 **"Designing with Operational Amplifiers: Application Alternatives"**
Amplifier improvement techniques, signal analyzers, signal conditioners, absolute value circuits, signal generators, computing circuits, data transmission circuits, as well as test and measurement circuits are discussed. Circuit designs and explanations of circuit operation are provided.
Burr-Brown $24.50 (220pp)

2 **"Digital Nulling of OP-05 and SSS725"**
(DAC-08, OP-05, SSS725)
Shows digitally controlled offset nulling achieved by imbalancing the first stage collector currents of the op amp with a D/A.
Precision Monolithics AB-3 (1pp)

3 **"Diode-Connected FET Protects Op Amps"**
(BB3528CM)
Shows how to use an FET to protect an op amp from overload in a circuit that measures dielectric properties.
Burr-Brown AN-106 (1pp)

4 **"Fast Settling Operational Amplifier"**
(HA-5190, HA-5195)
Covers operation at elevated temperatures, frequency compensation techniques and performance enhancement methods for op amps used in pulse, RF and video amplifiers, waveform generators, data requisition and instrumentation.
Harris Application Note 525 (4pp)

5 **"HA-909 Operational Amplifier"**
(HA-909, HA-911)
Discusses applications as a unity gain breadboard op amp, servo preamplifier, high-Q bandpass filter, Wien bridge oscillator, and phase-delay filters.
Harris Semiconductor AN-501 (2pp)

6 **"HA-909 Operational Amplifiers Performance Tailoring"**
(HA-909, HA-911)
Discusses how to optimize HA-909's offset, power dissipation, bandwidth, large signal bandwidth, slew rate, transient response, and stability with reactive loads.
Harris Semiconductor AN-502 (3pp)

7 **"How To Select Output Amplifiers for CMOS MDACs"**
(AD542, AD544)
Discusses unique problems of amplifying CMOS, multiplying-DAC outputs. Provides performance comparison of two op amp families to aid in selection.
Analog Devices (4pp)

8 **"IC Power Op Amps (Revised)"**
(μA759, μA791)
Discusses evolution of power op amps with specific reference to the μA759 and μA791. Included are applications to voltage regulators, audio amplifiers and servo motor drivers.
Fairchild AN347 (8pp)

"IC Preamp Challenges Choppers On Drift"
See listing under (Linear) Pre-amplifiers (National)

9 **"L144 Programmable Micro-Power Triple Op Amp"**
(L144)
Describes device function, elements of programming, effects of slew rate limiting. Applications discussed include instrumentation amplifier, tone detectors, triple-amplifier active filters, and a micropower double-ended limit detector.
Siliconix AN73-6 (6pp)

Amplifiers, Operational (cont)

10 **"Logarithmic Amplifiers and Operators Parameter Definition and Measurement"**
Defines and explains logarithmic amplifier parameters.
Teledyne Philbrick AN-27 (3pp)

11 **"Low Power Operational LH0001 Amplifier"**
(LH0001)
Operation of circuit offering 0.2 mv typical offset voltage at 25 C and quiescent supply currents in 100 μA range.
National Linear Applications Handbook AN-10 (4pp)

12 **"Measurement of Burst (Popcorn) Noise in Linear Integrated Circuits"**
Discusses "pass-fail" criteria and describes a test set-up for measuring burst noise. The set-up includes a high gain amplifier-filter, a bipolar comparator, and a counter-latch-timer control circuit.
RCA ICAN 6732 (8pp)

13 **"Micro Power Applications Collection"**
(OP-20)
Discusses the OP-20 Micro-Power Operational Amplifier as a combination of precision performance, ultra-low supply current and single power supply operation.
Precision Monolithics AN-34 (4pp)

14 **"Minimization of Noise in Operational Amplifier Applications"**
(OP-07)
Describes internal and external sources of noise. Helps to locate noise sources by frequency. Gives examples of noise calculation using the OP-07 as an example.
Precision Monolithics AN-15 (11pp)

15 **"New Design Techniques for FET Op Amps"**
(LH0022, LH0022C, LH0042C, LH0052, LH0052C)
Gives parameters for LH0022, LH0042 and LH0052 operational amplifiers. Discusses rationale for FETs in these devices, describes the circuits. Describes application as voltage followers, integrators, sample/hold amplifiers, comparators, instrumentation and charge amplifiers.
National Special Functions Databook AN-63 (12pp)

16 **"Operational Amplifier Noise Prediction"**
Provides a noise model, a procedure for computing output noise, and spot noise curves for many Harris amplifiers.
Harris Semiconductor AN-519 (10pp)

17 **"Operational Amplifier Parameter Definition and Measurement Guide"**
Defines parameters and means of measuring them.
Teledyne Philbrick AN-23 (8pp)

18 **"Operational Amplifier Stability: Input Capacitance Considerations"**
(HA-2600, HA-2605)
Discusses overcoming stray capacitance in op amps, such as the HA-2600.
Harris Semiconductor AN-515 (2pp)

19 **"Operational Amplifiers—Design and Application"**
Covers basic theory, amplifier design techniques and applications.
Burr-Brown $27.50 (470pp)

© IC MASTER

LINEAR

Amplifiers, Operational (cont)

1 **"Power Op-Amp Heat Sink Kit"**
(ICH8510, ICH8520, ICH8530)
Discusses mounting the devices on heat sinks.
Intersil Application Bulletin A029 (2pp)

2 **"Precision Op Amp on a Semicustom Chip"**
(MONOCHIP)
Discusses building an op amp on a semicustom chip with performance comparable to standard precision units. Covers all phases of design and thermal considerations as well.
Interdesign APN-9 (10pp)

3 **"Precisional Operational Amplifier"**
(μA714)
Describes operation of the μA714 and compares key parameters with other precision op amps. Discusses applications including use as a replacement for chopper-stabilized amplifiers.
Fairchild AN348 (10pp)

4 **"Protect Op Amps from Overloads"**
Discusses protection from power-supply faults, keeping input voltages at safe levels, and limiting output currents.
Burr-Brown AN-60 (3pp)

5 **"Simple Precision Millivolt Reference Uses No Zeners"**
(OP-05)
Describes −3.5 mv to 3.5 mv reference built with instrumentation op amp and a potentiometer.
Precision Monolithics AN-10 (1pp)

"Specifying Selected Op Amps and Comparators"
See listing under (Linear) Comparators (National)

6 **"Test Procedures for Operational Amplifiers"**
Circuit for measuring offset voltage, bias current, offset current, open loop voltage gain, common mode and power supply rejection ratios, output voltage/current, power dissipation, and making continuity checks.
Harris Semiconductor AN-508 (2pp)

7 **"The 8007—A High Performance FET-Input Operational Amplifier"**
(ICL8007)
Circuit description, applications as log and antilog amplifiers, photocell amplifier, peak detector, sample and hold circuits, high impedance buffer, and Wien Bridge oscillator.
Intersil Application Bulletin A005 (6pp)

8 **"The HA-2400 PRAM Four Channel Operational Amplifier"**
(HA-2400, HA-2405)
This is a programmable input stage, operational amplifier. This note describes its applications including an analog multiplexer with buffered input and output, an inverting or non inverting amplifier with a programmable gain, a sine wave oscillator with programmable frequency, and a track and hold/sample and hold circuit.
Harris Semiconductor AN-514 (8pp)

Amplifiers, Operational (cont)

9 **"The HA-2530/2535 Wideband High Slew Inverting Amplifier"**
(HA-2530, HA-2535)
Briefly discusses internal circuit. Shows how closed-loop frequency response can be predicted. Describes application as a fast settling coaxial driver, a 10 MHz coaxial line driver, a wide range signal separator, a high frequency triangular wave generator, and a current-to-voltage converter.
Harris Semiconductor AN-516 (11pp)

10 **"The HA-2900 Monolithic Chopper Stabilized Amplifier"**
(HA-2900)
Discusses offset voltage and current drift and chopper stabilization, then describes the circuit. Applications include a high impedance differential instrumentation amplifier, use as an integrator, and several wide bandwidth configurations.
Harris Semiconductor AN-518 (8pp)

"The Instrumentation Amp vs the Op Amp; Which, Where, and How to Use Them"
See listing under (Linear) Amplifiers, Instrumentation (Teledyne Philbrick)

11 **"The Monolithic Op Amp: A Tutorial Study"**
Detailed paper on the design of IC operational amplifiers.
National Linear Applications Handbook (18pp)

12 **"The OP-07 Ultra-Low Offset Voltage Op Amp—A Bipolar Op Amp that Challenges Choppers, Eliminates Nulling"**
(OP-07)
Describes circuit design, compares performance to other devices. Covers application in a voltage reference, a high accuracy buffer, a D/A test system, a composite summing amplifier, an absolute value circuit, an analog computer building block, and as a thermocouple amplifier.
Precision Monolithics AN-13 (12pp)

13 **"Using Op Amps in Low Noise Applications"**
Discusses shot noise and noise from source resistances.
Burr-Brown AN-68 (2pp)

14 **"Working with High Impedance Op Amps"**
Describes a low offset voltage op amp that also has low input current error, especially at high temperatures. Discusses techniques for eliminating problems with high impedance circuits.
National Semiconductor AN241 (6pp)

Amplifiers, Power

15 **"D.C. Servo Motor Systems Using the ICH8510"**
(ICH8510)
Explains servo systems in general and use of the device for velocity control, position control, and torque control in particular.
Intersil Application Bulletin A026 (4pp)

"LM380 Power Audio Amplifier"
See listing under (Linear) Consumer, Audio (National)

"Power D/A Converters Using the IH8510"
See listing under (Interface) Converters (Intersil)

LINEAR

Amplifiers, Power (cont)

1 **"TBA810S/AS Thermally Protected Power Amplifier"**
(TBA810)
Description of the device followed by discussion of its performance. Also shows examples of use in tone control, TV, radio and tape playback channel applications.
SGS-ATES Technical Note 120 (16pp)

2 **"TBA820 Two-Watt Monolithic Audio Amplifier"**
(TBA820)
Lists main electrical characteristics of device and presents typical applications.
SGS-ATES Technical Note 114 (11pp)

3 **"TCA830S-Thermally Protected Audio Power Amplifier"**
(TCA830S)
Briefly describes how the device functions followed by an examination of performance under different supply and load conditions. Portable AM/FM receiver, intercom, and magnetic tape player circuits are shown.
SGS-ATES Technical Note 126 (15pp)

4 **"TCA940 Fully Protected Audio Amplifier"**
(TCA940)
Presents temperature and output short circuit protection features of the device along with a description of its performance. Illustrates use of the device in a stereo amplifier and an equalized amplifier for magnetic pickups.
SGS-ATES Technical Note 119 (15pp)

5 **"TDA2020/TDA2010 HI-FI Monolithic Amplifiers"**
(TDA2020, TDA2010)
Describes these power amplifiers and how to apply them.
SGS-ATES Technical Note 130 (12pp)

6 **"The MC1554 One-Watt Monolithic Integrated Circuit Power Amplifier"**
(MC1554)
Describes the circuit, including dc characteristics, frequency response, and distortion. Shows how to calculate package power dissipation using the curves on the data sheet. Describes application, as one watt non-inverting, inverting, pulse power, and three-watt differential output amplifiers.
Motorola AN-401 (7pp)

Amplifiers, RF

7 **"A High Gain Integrated Circuit RF-IF Amplifier with Wide Range AGC"**
(MC1590G)
Describes operation and Y parameters of the MC1590G. Applications include mixer plus IF, video, single and two-stage RF amplifiers.
Motorola AN-513 (10pp)

8 **"A Two-Stage 1kW Solid-State Linear Amplifier"**
Discusses the design of 50W and 300W linear amplifiers for the 1.6 to 30 MHz frequency band.
Motorola AN-758 (16pp)

Amplifiers, RF (cont)

9 **"Application of the RCA CA3002 Integrated-Circuit IF Amplifier"**
(CA3002)
Describes circuit, operating modes, characteristics, and application as an envelope detector, product detector, and a Schmitt trigger.
RCA ICAN-5036 (9pp)

10 **"Application of the RCA CA3004, CA3005, and CA3006 Integrated-Circuit RF Amplifiers"**
(CA3004, CA3005, CA3006)
Discusses operating modes, Y parameters, noise performance, video amp capabilities, gain control, cross modulation and modulation distortion. Covers application as single-ended RF amplifier, tuned IF amplifier, mixer, suppressed-carrier modulator and product detector.
RCA ICAN-5022 (26pp)

11 **"Application of the RCA CA3021, CA3022, and CA3023 Integrated-Circuit Wideband Amplifiers"**
(CA3021, CA3022, CA3023)
Describes circuit and operating characteristics. Covers video, 10 MHz IF, 455 kHz IF, 28 MHz two-stage limiter, and 500 kHz limiting amplifier applications.
RCA ICAN-5338 (12pp)

12 **"Application of the RCA CA3028A and CA3028B Integrated-Circuit RF Amplifiers in the HF and VHF Ranges"**
(CA3028A, CA3028B)
Descries circuits and operating modes. Covers use as an RF amp, autodyne converter, IF amp, and limiter.
RCA ICAN-5337 (10pp)

13 **"Linear Amplifiers for Mobile Operation"**
Discusses the design of a portable amplifier suitable for amateur radio applications.
Motorola AN-762 (8pp)

14 **"Logarithmic IF Strips Using Monolithic Integrated Circuits"**
(SL521)
Describes operation of this log amplifier in successive detection type IF strips with center frequencies from 10 to 100 MHz. Covers broadband and narrow band circuits and describes in detail a 60 MHz wide-range logarithmic amplifier.
Plessey Semiconductor Technical Communication (3pp)

15 **"Logging IF Strip"**
(SL1521)
Describes a logging IF strip using Plessey IC's.
Plessey Semiconductor (2pp)

Amplifiers, Special Purpose

16 **"Using the 8048/8049 Monolithic Log-Antilog Amplifier"**
(ICL8048, ICL8049)
Describes in detail the operation of the 8048 log amp, and its counterpart, the 8049 antilog amp.
Intersil A007

LINEAR

Amplifiers, Video

1 **"Application of the RCA CA3001 Integrated-Circuit Video Amplifier"**
(CA3001)
Describes circuit and operating characteristis. Covers cascaded stages and use as a Schmitt trigger.
RCA ICAN-5038 (9pp)

"Television Video IF Amplifier Using Integrated Circuits"
See listing under (Linear) Consumer, TV (Motorola)

2 **"Video Applications"**
(HA-5190, HA-5195)
Discusses power supply requirements and temperature considerations, and provides design and prototyping tips for using an op amp as a video amplifier.
Harris AN526 (5pp)

Arrays

3 **"Application of the RCA CA3018 Integrated Circuit Transistor Array"**
(CA3018)
Array of two isolated silicon epitaxial transistors plus two transistors with emitter-base common connections, suited for closely matched device requirements or interconnections with non-integrable components. Applications covered include IF-RF, video, AGC, audio and dc amplifiers.
RCA ICAN-5296 (5pp)

4 **"Application of the RCA CA3019 Integrated-Circuit Diode Array"**
(CA3019)
Describes circuit configuration, operating characteristics and applications, including balanced modulator, high-speed gates, balanced mixer, and a ring modulator.
RCA ICAN-5299 (6pp)

5 **"Designing with an IC Transistor Array Containing Matched Super-Beta Transistors"**
(CA3095)
Describes CA3095 IC array. Applications: low frequency amplifier, low noise video amplifier, long-delay monostable multivibrator, low-input-bias current comparator, analog timer for long delays, high input impedance dc-voltmeter circuit, and tape-head preamplifier.
RCA ICAN-6222 (9pp)

6 **"Super-Matched Differential Pair"**
(MONOCHIP)
Illustrates matching capabilities of interconnected NPN devices on the Monochip family. The circuit described consists of 2 transistors implemented by interconnecting 18 small geometry devices in parallel.
Interdesign APN-20 (5pp)

Arrays (cont)

7 **"Using the SL362C Low Noise Transistor Pair"**
(SL362)
Provides general data on noise performance plus application in DC to 200 MHz amplifier.
Plessey Semiconductor Technical Communication (4pp)

Communications

8 **"A 10-Number Repertory Pulse Dialer"**
(AY5-9100, AY5-9200, AY5-9500)
Diagram and short description of a telephone pulse dialer with capability for storage and reference of 10 numbers of up to 22 digits each.
General Instrument Bulletin 0702 (2pp)

9 **"A CB Audio Compression System"**
(MONOCHIP)
Describes using the device to provide an on-chip regulator, audio pre-amp, AGC amplifier, DC volume control, and a headphone driver amplifier for use in a CB transceiver.
Interdesign APN-10 (7pp)

10 **"Applications of Hybrid Active Filters to Telecommunication Systems"**
(AF133, AF134)
Transmit and receive filters in 8 kHz sample rate PCM systems such as D3 channel bank and band splitting filters for DTMF receivers are described, and their application to these systems is discussed.
National AN-221 (4pp)

11 **"CRC8030 Telephone DTMF Receiver"**
(CRC8030)
Discusses dual-tone multi-frequency signaling. Includes specifications, test data, and interface capabilities.
Rockwell (28pp)

12 **"Data Conversion, Switching, and Transmission using the Intel 2910A/11A Codec and 2912 PCM Filter"**
(2910A/2911A, 2912)
Provides general telecommunications concepts and terminology. Includes technical reviews of codecs and PCM filters and gives application guidelines.
Intel AP-64 (40pp)

13 **"Delta Modulation for Voice Transmission"**
Provides introduction to delta modulation basics and describes various applications, including telecommunications and audio delay lines, in which it can be used.
Harris Semiconductor AN-607 (6pp)

14 **"Digital Telephony and the Integrated Circuit CODEC"**
(TP3000, TP3001)
Discusses in detail PCM CODECs. Covers theory, μ-law and A-law characteristics, and device specifications. Also provides test controller examples, transmission applications, and switching applications.
National AN-215 (16pp)

15 **"Dual Tone Decoding"**
(XR567, XR2567)
Discusses and presents diagrams for a fast, narrow band tone decoder, a touch-tone decoder, and a low cost frequency indicator.
Exar AN-08 (2pp)

LINEAR

Communications (cont)

1 **"EX-C277 Low-Voltage PCM Repeater IC"**
(XR-C277)
Explains PCM repeater fundamentals, device operation, and presents schematic for a repeater application.
Exar An-04 (6pp)

2 **"Gain Measurements in a CODEC System"**
(TP3000)
Explains aspects of telecommunication measurement techniques and units as they apply to the single channel CODEC.
National AN-219 (4pp)

3 **"HC-55516/32 CVSD Concept and Operations"**
(HC55516, HC55532)
Outlines Continuously Variable Slope Delta Modulation and compares it to pulse code modulation.
Harris Semiconductor (5pp)

4 **"High Performance PCM Repeater Using XR-C262"**
(XR-C262)
The design principle and the electrical characteristics of the XR-C262 high performance PCM repeater IC are described. Circuit connection and application examples are given in its use in 1.5 Megabit or 2 Megabit PCM systems.
Exar AN-10 (8pp)

"Modems"
See listings under (Interface) Data Transmission

5 **"Monolithic Dual-Tone Multi-Frequency Receiver"**
(SSI201)
Describes device and its operation, gives performance data and three application circuits: a 16-channel remote control, a 2-of-8 decoder, and a DTMF to rotary dial pulse converter.
Silicon Systems (8pp)

6 **"One-Button 32 Number Repertory Dialer/Calculator"**
(AY5-9200)
The circuit described features one-button redial of one of the 32 storable telephone numbers of up to 22 digits each. The 8-digit calculator features five functions, including percent.
General Instrument Bulletin 0706 (6pp)

7 **"Pushbutton Dialer with Memory"**
(AY5-9100, A5-9200, AY5-9500)
Provides instructions, diagram, and PC board layout for an add-on device that connects to any telephone and permits dialing via a separate keyboard. The module has a redial mode and a 20-digit 10 number expandable memory.
General Instrument Bulletin 0701 (7pp)

8 **"S2559 Digital Tone Generator"**
(S2559)
Describes a tone generator designed specifically to implement a dual tone telephone dialing system.
American Microsystems ANT01 (12pp)

9 **"SL560 Low Noise Amplifier Owner's Manual"**
(SL560)
Describes operation of a high-power 50-ohm amplifier, includes design examples of a 2-channel, variable-gain preamplifier.
Plessey Semiconductor (9pp)

Communications (cont)

10 **"SL600 Series—Integrated Circuits for Radio Communications"**
(SL600 Series)
Describes circuits and applications for the following: RF/IF amplifiers; limiting RF amplifier/detector; AGC generators; AF amplifier, VOGAD side tone amplifier, AM detector, AGC amplifier and SSB demodulator; multimode detector; microphone/headphone amplifier; double balanced modulators; and a square log device. Describes synchrodyne, superhet, SSB and multimode receivers; SSB and AM transmitters; SSB transceiver, a multi/mode transceiver and a Morse keyer.
Plessey Semiconductor Applications Manual (92pp)

11 **"The CRC8030 Dual Tone Multi-Frequency Receiver"**
(CRC8030)
Discusses various approaches to DTMF receiver design and DTMF signaling. Includes a chart of receiver specifications and a description of the device.
Rockwell (11pp)

12 **"The Impact of LSI on the Design of PCM Codecs"**
Discusses the changes existing telephone systems will go through as LSI circuits are increasingly used for PCM and computer controlled switching.
General Instrument Bulletin 0707 (4pp)

13 **"XR-C240 Monolithic PCM Repeater"**
(XR-C240)
Provides device description, description of circuit operation, and schematics for a typical repeater system.
Exar AN-02 (6pp)

Comparators

14 **"A High Speed Dual Differential Comparator—the MC1514"**
(MC1414, MC1514)
Describes circuit operation and applications, including level and limit detectors, multivibrators, line receivers, sense amplifiers, zero crossing pulse generator and a peak voltage detector.
Motorola AN-547 (13pp)

"A Simple Comparator Using the HA2620"
See listing under (Linear) Amplifiers, Operational (Harris)

15 **"AM685/AM686/AM687 Designing with High Speed Comparators"**
(685, 686, 687)
Gives a mathematical analysis of circuit operation. Discusses use as a pulse detector, precision monostable and applications requiring hysteresis.
Advanced Micro Devices (10pp)

16 **"Application of Programmable Micropower Comparators"**
(L161)
Describes the device and how to program it. Also describes the effects of programming on AC characteristics, limit, zero crossing, and level detectors; DC to DC converter applications.
Siliconix AN76-7

© IC MASTER

LINEAR

Comparators (cont)

1 **"High-Speed Comparator Applications"**
(SP9750, SP9685, SP9687)
Describes a family of high-speed comparators and circuits for A/D converters. Reviews all parallel, parallel/series and successive approximation conversion techniques.
Plessey (50pp)

"Radiation Testing of Linear Microcircuits"
Includes the 702. See listing under (Linear) General. (Fairchild).

2 **"The 725 Op Amp as a Low Level Comparator"**
(PM725)
Provides the circuit and design curves for a submillivolt level comparator based on the 725 op amp.
Precision Monolithics AN-25 (4pp)

3 **"Varying Comparator Hysteresis without Shifting Initial Trip Point"**
Describes adding a positive feedback circuit to introduce precise variable hysteresis into the usual comparator switching action.
Burr-Brown AN-62 (1pp)

Consumer, AM/FM

4 **"AM-FM Radio Designs Using the ULN-2242A, ULN-2241A and ULN-2240A Integrated Circuits"**
(ULN-2242A, ULN-2241A, ULN-2240A)
Describes ICs containing all the active circuits needed for the AM tuner, FM IF amplifier and detector of a radio receiver. Details options for implementing these functions.
Sprague AN27121.63 (14pp)

5 **"AM/SSB Transceivers and Noise Blanking Using SL1600 Series Circuits"**
(SL1623, SL1626, SL1640, SL1641)
Describes the sub-systems used in AM-SSB transceivers.
Plessey Semiconductor (10pp)

6 **"An AM Receiver Using the Plessey SL1600 Series"**
(SL1600 Series)
Describes the design of a simple AM receiver.
Plessey Semiconductor (7pp)

7 **"An SSB Transceiver for Citizens' Band Using Plessey SL1600 Integrated Circuits"**
(SL1600 Series)
Describes the design of an SSB transceiver.
Plessey Semiconductor (4pp)

8 **"Application of the CA3039E FM-IF Subsystem"**
(CA3089)
Discusses stability considerations and following circuits: quadrature-detector, audio and AFC, mute, tuning meter and rf-AGC, if amplifier/detector system and stereo decoder. Also covers operation at frequencies other than 10.7 MHz.
RCA ICAN-6257 (8pp)

Consumer, AM/FM (cont)

9 **"Binary Synthesizers Users Guide"**
Full details on components of a two-device binary synthesizer. Includes programming information.
Plessey Semiconductor (13pp)

10 **"Designing FM Tuners with TDA1062 and TDA1093 Integrated Circuits"**
(TDA1062, TDA1093)
Includes functional diagrams, schematics, and typical performance charts along with discussion of FM tuner design.
AEG-Telefunken (46pp)

11 **"Frequency Selective AM Detection Using Monolithic Phase-Locked Loops"**
(XR2228, XR215, XR2212)
Design of frequency selective coherent AM and AM/FM demodulator systems using these devices is described.
Exar AN-13 (4pp)

12 **"IF Amplifier/Detectors for FM Receivers"**
(SL6600, SL6640, SL6650, SL6690)
Describes monolithic ICs containing an IF strip, an FM demodulator and a squelch system for use in FM receivers for mobile, portable, base-station and paging systems. Provides circuit diagrams of typical applications and includes printed circuit layouts and component location.
Plessey (32pp)

13 **"Integrated Circuits for FM Broadcast Receivers"**
(CA3005, CA3011, CA3012, CA3013, CA3014)
Discusses circuits for FM tuner, IF amplifier, limiter, and detector applications.
RCA ICAN-5269 (7pp)

14 **"Integrated-Circuit Stereo Decoder Using the CA3090AQ Stereo Multiplex Demodulator"**
(CA3090AQ)
Gives circuit description. Describes the LC oscillator, reactance, stereo defeat, dc coupled flip-flop preamplifier and phase splitter circuits.
RCA ICAN-6259 (10pp)

15 **"Manual and Automatic FM Tuning System Using Economega I"**
(Economega, AY3-8203, ER1400, MEM4956)
Describes a system that allows manual tuning of a Goodman 1-20 tuner with non-volatile electronic storage of tuning data for 16 stations. Diagrams, schematic.
General Instrument Bulletin 0414 (4pp)

16 **"Radio Receiver Frequency Counter/Clock"**
Supplies diagram and operating instructions for using each device to display time or frequency on a 3½ digit display.
General Instrument Bulletin 0411 (3pp)

17 **"SL1600 Series Transceiver Applications"**
(SL1600 Series)
Discusses simple SSB and multimode transceiver design.
Plessey Semiconductor (32pp)

LINEAR

Consumer, AM/FM (cont)

"Scanning Logic for RF Scanner-Receivers Using CMOS Integrated Circuits"
See listing under (Digital) CMOS (Motorola)

1 **"TDA1083—Integrated Circuit for AM/FM Receivers"**
(TDA1083)
Shows external connections for using integrated receiver circuit in low and medium power AM/FM radios, VHF and microwave receivers, and in TV sound channels.
AEG-Telefunken Halbleiter Informationsdienst 2.78 (11pp)

2 **"TDA1200 FM-IF System for High Performance Radio Receivers"**
(TDA1200)
Gives a detailed description of the device. Describes relative performance of device when used in an FM tuner, an AM/FM car radio, and a portable AM/FM radio.
SGS-ATES Technical Note 117 (12pp)

3 **"The Design of Programmable Dividers for UHF and VHF Synthesizers"**
(SP8000 Series)
Details considerations for designing a programmable frequency synthesizer using high-speed frequency dividers and standard TTL devices. Example problems demonstrate device selection procedures.
Plessey AN2 (24pp)

4 **"ULN-2204A AM/FM Receiver System"**
(ULN-2204)
Presents operation of device and discusses typical applications.
Sprague AN-27121.51 (12pp)

5 **"VHF Synthesizer"**
(SP1648, SL1521, SP8690, SP8790, SP8760)
Describes a phase-lock loop synthesizer used in marine UHF radio telephone, weather broadcasts, air-traffic control and the amateur 2-meter band. Provides electrical diagrams and circuit board layout.
Plessey (3pp)

Consumer, Audio

"An AGC Building Block"
See (Linear) Consumer, TV (Interdesign)

6 **"An Electronic Music Synthesizer Using the XR2207 and the XR2240"**
(XR2207, XR2240)
The design of a simple, low-cost music synthesizer system is described.
Exar AN-15 (2pp)

7 **"An Electronic Piano Using the AY-1-1320"**
(AY1-0212, AY1-1320, AY1-5050)
Presents circuit diagrams and description of an electronic piano using a divider, a top octave generator and the device.
General Instrument Bulletin 0501 (5pp)

Consumer, Audio (cont)

8 **"Application of Audio Amplifier - Transistor Array ICs"**
(LM389)
Discusses the use of audio amplifier ICs with on-chip transistor arrays in a variety of audio circuits including a dc-dc converter, bistable touch switch, frequency standard, oscillator and logarithmic amplifier.
National Semiconductor AN-264 (5pp)

9 **"Application of the RCA CA3007 Integrated-Circuit Audio Amplifier"**
(CA3007)
Describes circuit. Covers application as dual-supply audio driver in a direct-coupled audio amp, and as single-supply audio driver in a capacitor-coupled audio amp.
RCA ICAN-5037 (4pp)

10 **"Applications for Audio and Electronic Music"**
(SSM2030, SSM2040, SSM2050)
Analysis of the 2030 voltage controlled oscillator, the 2040 voltage controlled filter and the 2050 transient generator in electronic music systems. Discusses error sources and techniques for improving accuracy and temperature stability. Circuit diagrams are included.
Solid State Micro Technology for Music (8pp)

11 **"Audio Amplifiers"**
Discusses basic design considerations, performance capabilities, and circuit configurations for audio amplifiers intended for a wide range of power-output levels. Covers preamplifiers, intermediate stages, overload protection circuits, as well as audio output circuits. Features circuit diagrams and per-data for a wide variety of practical circuits, including discrete-component types, integrated-circuit types, or a combination of discrete components and integrated circuits.
RCA APA-551 (104pp) $5.00

12 **"Build a Simple Comb-Filter or Flanger with a Bucket Brigade Delay Line"**
(SAD1024A)
Describes a flanger (electronic sound modifier) and what is needed to build one.
Reticon AN-113 (4pp)

13 **"Cassette Tape Players using TDA7270"**
(TDA7270)
Describes circuit operation and gives application guidelines for an IC that provides control functions for a cassette/radio unit.
SGS-ATES DN347 (8pp)

14 **"M252 and M253 Rhythm Generators for Electronic Organs"**
(M252, M253)
Defines and describes rhythm generators. Presents these two devices, and describes their use in electronic organs.
SGS-ATES Technical Note 131 (21pp)

15 **"MOS Music"**
(S10377, S10430, S50240)
Illustrates a basic electronic organ system and describes its implementation using the devices.
American Microsystems AN79C05 (6pp)

16 **"S8890 Rhythm Generator"**
(S8890)
Demonstrates capabilities of the S8890, and explains programming of custom ROM patterns.
American Microsystems AN79RR01 (11pp)

LINEAR

Consumer, Audio (cont)

"TCA600/900 and TCA610/910 Integrated Motor Speed Regulators"
See listing under (Linear) Industrial Control (SGS-ATES)

1 **"TDA105M—Cassette Recorder Preamplifier with ALC"**
(TDA1054M)
Discusses features of the device and preamplifier noise. Applications in Hi-Fi, stereo, and dynamic range compressors are described.
SGS-ATES Technical Note 124 (24pp)

2 **"Use of Analog Delay Lines for Audio Speed Change without Pitch Changes"**
(SAD1024A)
Describes technique for increasing or slowing the speed of a recording.
Reticon AN-112 (4pp)

3 **"Useful Noise—S2688"**
(S2688)
Explains noise types and workings of a noise generator. Examines use of device in Pink and White noise generators and as a noise source in synthesizer circuits.
American Microsystems AN79C01 (3pp)

4 **"Writing Music for the AY3-1350 Tunes Synthesizer"**
(AY3-1350)
Provides coding scheme for writing music to be incorporated in a PROM and played back by a music synthesizer chip.
General Instrument Bulletin 0502 (4pp)

Consumer, Medical

5 **"A Personalized Heart-Rate Monitor with Digital Readout"**
(MC1776, MC14013, MC14040, MC14572)
Describes digital heart-rate monitor using the MC1776 op amp and CMOS digital ICs.
Motorola AN-714 (4pp)

Consumer, TV

6 **"A Flexible Integrated-Circuit Color Demodulator for Color Television"**
(CA3067)
Describes circuit operation of the CA3067, including its output amplifiers, demodulator, demodulator preamp, and tint control amplifier. Describes use of this circuit in a red-green-blue system.
RCA ICAN-6724 (8pp)

7 **"A High Stability Syn-AGC and Horizontal-Vertical Countdown System for 525-Line Color Television Receiver Applications Using the RCA CA3154G and CA3157G Integrated Circuits"**
(CA3154, CA3157)
Provides detailed description of each circuit and how they are used in 525-line color TV applications. Contains schematics and waveforms for selected terminals.
RCA ICAN-6802 (20pp)

Consumer, TV (cont)

8 **"A Medium Cost PLL Varactor Tuning System Utilizing Off-the Shelf Logic"**
Describes a frequency domain tuning scheme for varactor TV tuners.
Motorola AN-729 (14pp)

9 **"A Single IC for the Complete PIX-IF-System in TV Receivers"**
(CA3068)
Gives a detailed description of the circuit functions of the CA3068 and its use in color and b/w TV receivers.
RCA ICAN-6303 (17pp)

10 **"A Synthetic Spectrum Tuning System for TV"**
Describes a tuning system which generates a complete spectrum of TV channel markers to achieve precise tuning on any channel.
Motorola AN-739 (12pp)

11 **"An AGC Building Block"**
(MONOCHIP)
Describes four AGC circuits using a semi-custom chip. Includes graphs of characteristics and schematics.
Interdesign APN-17 (6pp)

12 **"Application of the CA3126Q Chroma-Processing IC Using Sample-and-Hold Circuit Techniques"**
(CA3126Q)
Detailed circuit description of the device, which requires only one adjustment; a trimmer capacitor to tune the crystal filter. Discusses performance data, the phase detector, sample and hold circuits, the VCO loop, first chroma amplifier and ACC servo loop, and the second chroma amplifier.
RCA ICAN-6247 (8pp)

13 **"Application of the CA3143 and CA3144 TV Luminance Processors"**
(CA3143, CA3144)
Describes application information for both the CA3143 and CA3144 luminance processors.
RCA ICAN-6718 (4pp)

14 **"Application of the RCA CA3044 and CA3044V1 Integrated Circuits in Automatic-Fine-Tuning Systems"**
(CA3044)
Describes circuits, operating characteristics and dynamic performance of this wideband amplifier for AFC applications.
RCA ICAN-5831 (5pp)

15 **"Applications of the CA3134G Sound IF and Output Subsystem in Television Receivers"**
(CA3134)
Describes device and its application in TV sound systems.
RCA ICAN-6728

16 **"Description and Application of the RCA CA3120E and CA3142E Integrated-Circuit TV-Signal Processors"**
(CA3120E, CA3142E)
Gives circuit description and application instructions for two ICs that process video signals in monochrome or color TV receivers and supply noninverted and video outputs, dual-polarity composite synchronization signals and AGC signals.
RCA ICAN-6302 (9pp)

LINEAR

Consumer, TV (cont)

1 **"Economega I Digital Tuning for UK Televisions"**
(Economega)
Describes two eight program UHG band versions of the Economega System specificaly for U.K. market. Conventional AFC is retained for simplicity. Includes a manually controlled search feature.
General Instrument Bulletin 0420 (4pp)

2 **"Feedback-Type Volume-Control Circuit for RCA CA3041 and CA3042 Integrated Circuits"**
(CA3041, CA3042)
Describes several types of volume controls for television receivers using these ICs, with detailed discussion of feedback control.
RCA ICAN-5841 (4pp)

3 **"PAL Color Encoding Systems for the AY3-8500 TV Game Circuit"**
(AY3-8500)
Briefly describes the PAL system, then presents two alternate circuits for color encoding the AY3-8500 TV game according to PAL.
General Instrument Bulletin 0404 (8pp)

4 **"Programmable TV Timer/Time-Channel Display"**
(MM53107, MM53100, MM5840)
Describes an on-screen TV real time and channel display based on the devices. Includes schematics and PC board layout.
National Semiconductor AN-196 (10pp)

5 **"Remote Control of Color TV Sets via Infrared Transmission"**
(TDA4180, SAB2010, SAB2020, H843, SAS660, SAS770)
Describes design and operation of an infrared transmitter and receiver for remote control of a TV set. Controlled functions include power, brightness, color, sound volume and channel selection.
AEG-Telefunken Halbleiter Informationsdienst 2/66 (3pp)

6 **"Television Horizontal APC/AFC Loops: The Last 10 Percent"**
Discusses some of the common problems that may be encountered in the design of horizontal APC/AFC loops and methods to avoid or overcome them.
Motorola AN-727 (15pp)

7 **"Television Video IF Amplifier Using Integrated Circuits"**
(MC1330, MC1350, MC1352, MC1353)
Discusses requirements of the video IF section of a TV receiver. Describes MC1350/2/3 amplifier and MC1330 detector circuits. Includes design for a practical TV IF amplifier and detector.
Motorola AN-545A (11pp)

8 **"The MC1323—A Fully Programmable Demodulator"**
(MC1323)
Describes operation of this NTSC demodulator and use with various picture tube phosphors, especially color temperature D6500.
Motorola AN-763 (16pp)

Consumer, TV (cont)

9 **"Video Amplifier Design: Know Your Picture Tube Requirements"**
(MC1323)
Describes video systems designed to alleviate design compromises associated with driving a unitized gun picture tube.
Motorola AN-761 (26pp)

10 **"Video Game FM Sound Generator"**
Describes a system that enables a TV sound system to be used for game sounds as well.
General Instrument Bulletin 0405 (2pp)

Followers

"Monolithic Operation Amplifiers—The Universal Linear Component"
See (Linear) Amplifiers, Operational (National)

General

11 **"A Cookbook Approach to High Speed Data Acquisition and Microprocessor Interfacing"**
Shows how to design a complex data-acquisition system as a series of building blocks using a mixture of LSI, MSI, SSI and discrete devices.
Intersil Application Bulletin A020 (20pp)

12 **"A Guide to Hybrid Circuit Design"**
Discusses techniques that aid the hybrid designer in the design and development of thin and thick film hybrid MICRO CIRCUITS. Emphasis is placed on assembly techniques and procedures with general design rules that help to avoid common design problems.
Precision Monolithics AN-33 (4pp)

13 **"Alarm Circuit"**
(MONOCHIP)
Discusses an alarm sensing circuit capable of driving a loud speaker or LED or triggering a logic level. The design and performance is described in detail, including all component values, layout and characteristics over the military temperature range.
Interdesign APN-1 (7pp)

14 **"Analog Data Manual"**
Covers linear IC processing and design, data sheets and characteristics of operational amplifiers, video amplifiers, power controllers, timers, comparators, memory interfaces, transistor arrays, display drivers, D/A-A/D converters, PLL, microprocessor interface, and radio, audio and TV circuits. 1981.
Signetics $7.00 (448pp)

15 **"Applications Data Book"**
Contains Application Notes 1-17 individually described elsewhere.
Exar (80pp)

LINEAR

General (cont)

1 **"Bipolar Semi-Custom ICs in Non Entertainment Consumer Applications"**
(Monochips)
Discusses a semicustom approach to designing linear bipolar ICs in consumer, medical, telecommunications, military, industrial and automotive products.
Interdesign APN-24 (12pp)

2 **"Building Blocks for the Linear I.C. Designer"**
Presents approximate models for various basic circuit elements. Emphasizes key parameters of circuit and neglects complications.
Analog Devices (29pp)

"CMOS Linear Applications"
See listing under (Digital) CMOS (National)

3 **"Coil Driven Alarm Design Considerations"**
(ICM7220A)
Provides a simple circuit for boosting watch-circuit output to increase the volume of an audible alarm. Sample design problem is included.
Intersil Application Bulletin A031 (2pp)

4 **"Computer Analysis of Linear Semicustom IC's"**
(MONOCHIP)
Describes a computer aided design program jointly developed by Interdesign and UCC. Illustrates the use of this program by analyzing a high performance integrated phase-locked loop.
Interdesign APN-12 (6pp)

"Constant Current LED"
See listing under (Linear) Regulators (National)

5 **"Criteria for Choosing Resins and Evaluation Tests for Discrete and Integrated Power Devices in Plastic Packages"**
Describes the criteria and experimental procedures used in the choosing of moulding resin for plastic packaged devices.
SGS-ATES Technical Note 132 (15pp)

"Custom IC Design Using IL Technology"
See (Digital) IL (Exar)

6 **"Function Circuits, Design and Applications"**
Covers design theory and applications for such analog functions as multipliers, dividers, logarithmic amplifiers, exponentiators, RMS converters, and active filters. Includes notes on specifying and testing these functions.
Burr-Brown $24.50 (300pp)

7 **"General Solid State Gas/Smoke Detector Systems"**
Describes semiconductor and ionization chamber systems with some discussion of the use of these with CMOS ICs.
Motorola AN-735 (9pp)

8 **"IC Crystal Oscillators"**
(MONOCHIP)
Covers crystal oscillator basics and interfacing them with device.
Interdesign APN-4 (3pp)

General (cont)

9 **"Integrated High Speed Operational Amplifier"**
(MONOCHIP)
Explains how modern high speed, high stability circuits can be constructed using semicustom IC technology. A representative op amp with a bandwidth of 40 MHz and an open loop gain of 10,000 is presented.
Interdesign APN-7 (7pp)

10 **"Interface Databook"**
Primarily data sheets, but includes the following application notes individually described elsewhere: AN-22, 84, 108, 198, 199.
National $6

"Intrinsically Safe Data Acquisition"
See listing under (Digital) CMOS (Burr-Brown)

11 **"Linear Applications Handbook"**
Published 1980, includes National application notes (AN) 2-4, 13, 20, 21, 23, 24, 29-32, 41, 42, 46, 48, 56, 64, 69-72, 74, 75, 79, 81, 82, 87, 88, 97, 103, 104, 110, 115, 116, 125, 127, 129, 132, 146, 147, 151, 153, 154, 156, 159, 161, 173, 178, 179, 181, 182, 184, 192, 193, 210, 211, 222, 225, 233, 234, 238, 240, 241, 242 and Linear Briefs (LB) 1-29, 32-39, 40-50 individually described elsewhere.
National $16 (623pp)

12 **"Nonlinear Circuits Handbook"**
Covers principles, circuits, performance, specifications, testing and applications for multipliers, dividers, squares, log circuits, multi-function and rms-to-dc converters.
Analog Devices $5.95 (535pp)

13 **"Optoelectronics Handbook"**
Covers discrete LED lamps, LED numeric displays, multidigit numeric displays, bar graphs, and interface devices. Both product descriptions and applications included.
National $6 (160pp)

14 **"Polarity Programmable Peak Detector"**
Details a circuit that gives positive or negative peak detection and reset levels over a ± 10 V range.
Precision Monolithics AN-27 (2pp)

15 **"Rectifier Circuits for Linear IC's"**
(MONOCHIP)
Discusses techniques for designing rectifiers using the components available on semicustom IC's. Design precautions are examined in detail and illustrative diode, peak detector, and averaging rectifier circuits are presented.
Interdesign APN-6 (7pp)

16 **"Simplified Design of Astable RC Oscillators Using the CD4060B or Two CMOS Inverters"**
(CD4060B)
Stresses practical aspects of design and provides easy-to-use algebraic equations that permit values of R and C for a given oscillator frequency to be quickly determined.
RCA ICAN-6883 (2pp)

LINEAR

General (cont)

1 **"Solid-State Devices Manual"**
Provides tutorial information on discrete devices and ICs, with emphasis on consumer, hobbyist and experimenter applications.
RCA SC-16 $5.00 (750pp)

2 **"Summary of Electrical Characteristics of Some Well Known Digital Interface Standards"**
Summarizes the important electrical characteristics of the most commonly accepted interface standards (IEEE488, RS357, RS366, etc.) and offers recommendations on how to use the companies' products to meet those standards.
National AN-216 (15pp)

Industrial Control

3 **"A ROM-Digital Approach to PWM-Type Speed Control of AC Motors"**
Describes a pulse width modulation scheme to control motor speed. Shows a CMOS-ROM system to provide variable frequency drive for 1, 2, or 3 phase motors.
Motorola AN-733 (12pp)

4 **"A Variable Frequency Control for 3ϕ Induction Motors"**
Describes a variable frequency, variable voltage drive system for 3-phase inducton motor controls.
Motorola AN-766 (10pp)

5 **"Electronic Controller with an Equilibrium Sustaining Mode"**
(3500 Series)
Discusses a controller formed with two operational amplifiers in a pulse width modulation circuit with feedback. The feedback operates from a heater through the medium being heated to sense amplifiers.
Burr-Brown AN-63 (2pp)

6 **"Pulsed IR Light Barrier"**
(TDA4180P, U113B)
Describes electro-optical proximity-sensing system using a pulsed infrared light barrier. Provides circuit diagrams for receiver and transmitter, and includes curves for selecting external circuit RC values.
AEG-Telefunken Halbleiter Informationsdienst 1/77 (5pp)

7 **"TC900 and TC910 Integrated Motor Speed Regulators"**
(TCA900, TCA910)
Introduces speed regulator basic and describes device performance. Portable and car mounted applications are depicted.
SGS-ATES Technical Note 113 (10pp)

8 **"Temperature Measurement Method Based on Matched Transistor Pair Requires No Reference"**
(MAT-01, OP-10)
Discusses properties of matched transistor pairs, then describes temperature measuring systems built with a matched pair, constant current sources, and a differential amplifier (OP-10).
Precision Monolithics AN-12 (8pp)

Industrial Control (cont)

9 **"Variable Speed Control System for Induction Motors"**
(MC673, MC688)
Describes control scheme implemented with discrete components and IC logic coupled by an LED and a photo transistor. Gives example of a circuit used to drive a Class F, 60 Hz, permanent-split, capacitor induction motor with a 13 oz. in. load rating.
Motorola AN-575A (5pp)

10 **"μA7392 Motor Speed Controller"**
(uA7392)
Describes device operating principles and performance. Includes schematics, design considerations, and applications in a tape recorder, an optical tach, and for bidirectional motor control.
Fairchild AN-343 (20pp)

Instrumentation

11 **"4½ Digit Panel Meter Demonstrator/Instrumentation Boards"**
(ICL8052A, ICL7103A)
Describes two versions of the complete circuit for a 4½ digit DPM with ±2.000 V full scale and LED readout.
Intersil A019 (8pp)

12 **"A Complete Function Generator System Using the XR2206"**
(XR2206)
A self contained function generator system is described, using the device. Complete circuit connection diagram, parts list and assembly instructions are given for a DC to 100 kHz self-contained function generator system with AM/FM capability and triangle, sine and square wave output.
Exar AN-14 (4pp)

13 **"A Digital Multimeter Using the ADD3501"**
(ADD3501)
Describes a 3½ digit multimeter capable of measuring ac and dc voltages, currents and resistance with the device. Includes circuit diagram.
National AN-202 (4pp)

14 **"A Universal Sinewave Converter Using the XR2208 and XR2211"**
(XR2208, XR2211)
A circuit technique is described which can convert any periodic waveform into a low-distortion sinewave. The circuit operation is completely independent of input waveform amplitude and frequency as long as the input signal is periodic and can operate over a frequency range of 1 Hz to 100 kHz.
Exar AN-11 (4pp)

15 **"Building a Battery Operated Auto Ranging DVM with the ICL7106"**
(ICL7106)
Describes a technique for autoranging a battery-operated DVM suitable for panel-meter applications. Includes circuit ideas for measuring conductance, resistance and current, and for 9V and 5V supply operations.
Intersil Application Bulletin A046 (4pp)

LINEAR

Instrumentation (cont)

1 **"Building an Auto-Ranging DMM with the ICL7103A/8052A A/D Converter Pair"**
(ICL7103A, ICL8052A, ICL8007)
Describes the design and operation of two 10 μV resolution, 4½ digit auto-ranging DMMs using the 7103A/8052A pair.
Intersil A028 (6pp)

2 **"Design for a Battery Operated Frequency Counter"**
(ICM7208, ICM7207A)
Shows how to build a low-cost, battery-operated instrument for measuring both frequency and period, based around a crystal-controlled time-base circuit, a frequency-divider circuit and a counter-display chip. Includes circuit design and board layout.
Intersil Application Bulletin A015 (6pp)

3 **"Dual Polarity 3½ Digit DVM Realized with Simple CMOS Interface"**
(ADC3711, LF11300)
Describes an auto-zero, auto-polarity 3½-digit DVM using the LF11300 and the MM74C928 (ADC3711).
National AN-165 (2pp)

4 **"Everything You Always Wanted to Know About the 8038"**
(ICL8038)
Presents answers to the most frequently asked questions about the 8038 function generator and its applications.
Intersil A013 (4pp)

5 **"How to Build a Battery-Operated Auto-Ranging DVM with the ICL7106"**
(ICL7106)
Describes the design of an autoranging 3½ digit DVM using the ICL7106.
Intersil A046 (6pp)

6 **"Implementation of a Scanning Spectrum Analyzer Using the 2920 Signal Processor"**
(2920)
Reviews sampling theory and describes operation of a signal-processing chip used in spectrum analysis for speech processing, industrial control, medical electronics, signal detection and analog signal processing. Includes assembly code listings for processing functions.
Intel AP-29 (23pp)

7 **"Instrumentation Amplifiers—They're Great Problem Solvers When Correctly Applied"**
(MN2200)
Covers basic operation and application considerations for instrumentation amplifiers.
Micro Networks AN202 (4pp)

8 **"LD120/LD121 4½ Digit DVM"**
(LD120, LD121)
Details construction of a DVM using these devices.
Siliconix DA77-2 (4pp)

9 **"LM2907, LM2917 Tachometer/Speed Switch Building Block Applications"**
(LM2907, LM2917)
Covers basic circuit and use. Applications illustrated include: speed switch, analog display drive, automotive tachometer, motor speed controls, skid sensor, A/D converter, frequency doubler.
National Linear Applications Handbook AN-162 (16pp)

Instrumentation (cont)

10 **"Low Cost Digital Panel Meter Designs"**
(ICL7106, ICL7107)
Supplies complete assembly instructions for Intersil's LCD and LED evaulation kits as well as descriptions of individual components.
Intersil A023 (6pp)

11 **"RMS Converters and Their Applications"**
(LH0091)
Covers RMS converter basics and specifications. Sketches applications including spectrum analysis, harmonic distortion, noise, vibration analysis, and DVM uses.
National Special Functions Databook AN-180 (4pp)

12 **"Solid State Altimeter for Transponder Applications"**
(LX3702)
Describes a solid state altimeter using a pressure transducer. The unit provides an altitude transmission code for use with transponders, plus digital readout.
National AN-109 (8pp)

"The Integrating A/D Converter"
See (Interface) Converters (Intersil)

13 **"Thermometer for Albacore Fishing"**
(MONOCHIP)
Discusses characteristics of a thermometer used for albacore fishing built on a semi-custom chip. Includes schematic and block diagram.
Interdesign APN-21 (3pp)

14 **"Waveform Generator"**
(MONOCHIP)
Describes using two of the devices in a wave form generator application that produces sine, triangle, and square wave outputs. Provides schematics and a discussion of performance.
Interdesign APN-8 (10pp)

Modulators

15 **"Deadband Control with the SG1524 Regulating Pulse Width Modulator Circuit"**
(SG1524, SG2524, SG3524)
Discusses techniques to control the amount of deadband in push-pull inverter applications.
Silicon General Linear Brief 6 (1pp)

16 **"Designing with the SG1525/1527 Series of Pulsewidth Modulators"**
(SG1525, SG1527)
Discusses application of pulsewidth modulator ICs in a variety of output configurations, including bipolar power transistor, power FET, low-power transformer and single ended.
Silicon General ANSG1525/1527 (7pp)

17 **"Simplifying Converter Design with a New Integrated Regulating Pulse Width Modulator"**
(SG1524, SG2524, SG3524)
Describes various functions within the device and describes such applications as a low current polarity converter, a DC to DC converter, and a +5 to ±15V flyback converter.
Silicon General (7pp)

LINEAR

Multiplier

1 **"Log/Lin Multiplier"**
(MONOCHIP)
Describes an IC multiplier which achieves low noise and distortion. Covers all phases of development from initial concept and breadboarding to integration in an audio sweep function generator.
Interdesign APN-3 (11pp)

Multipliers

2 **"Analog Multiplier"**
(RC4200)
Includes functional description, electrical characteristics and circuit designs for multiplier and divider, square root, squaring and rms-to-dc converter circuits.
Raytheon (23pp)

3 **"Analog Shaping"**
(4301)
Describes the use of the 4301 multifunction circuit which has the transfer function XY/Z. Includes rms to dc conversion, exponentiation, trigonometric functions, vector computation, and use as a log amp.
Burr-Brown AN-70 (5pp)

"Function Circuits, Design and Applications"
See listing under (Linear) General (Burr-Brown)

4 **"Linear-Antilog Voltage Controlled Amplifiers"**
(SSM2000, SSM2020)
Discusses control circuits, voltage controlled amplifiers, and a four quadrant multiplier among other applications.
Solid State Micro Technology for Music (9pp)

5 **"Multiplier Application Guide"**
(AD530, AD531, AD532, AD533, AD534, AD536)
Explains multiplier basics, upkeep, and use in a variety of applications including instrumentation functions, signal generators and filters, and to augment the performance of other circuits.
Analog Devices (40pp)

6 **"Wideband Amplifier/Multiplier"**
(SG1402)
Operation and applications of the SG1402. Describes use as a single-ended variable gain amplifier, a modulator, and a demodulator.
Silicon General Linear IC Product Guide (4pp)

Phase Locked Loops

"A Medium Cost PLL Varactor Tuning System Utilizing Off-the-Shelf Logic"
See listing under (Linear) Consumer, TV (Motorola)

Phase Locked Loops (cont)

7 **"A New Generation of Integrated Avionic Synthesizers"**
Discusses several different types of servo phase locked loop systems and describes a synthesizer for avionic equipment.
Motorola AN-553 (9pp)

"A Phase-Locked Loop Tuning System for Television"
See listing under (Linear) Consumer, TV (Motorola)

8 **"A Wide Tracking Range Precision PLL System Using the XR2212 and XR4151"**
(XR2212, XR4151)
A two-chip PLL system is described which offers extremely wide tracking range without harmonic locking.
Exar AN-12 (3pp)

9 **"Applications of the COS/MOS CD4059A Programmable Divide-by-N Counter: Digital Frequency Synthesis for FM Tuners and CB Transceivers"**
(CD4059)
Discusses frequency synthesis using the counter for an FM digital tuner and a CB transceiver.
RCA ICAN-6374 (12pp)

10 **"Crystal Switching Methods for MC12060/MC12061 Oscillators"**
(MC12060, MC12061)
Discusses methods of using diodes as rf switches to select crystals for these oscillators. The techniques are useful for electronic selection of one of a group crystals with minimum disturbance to the series resonant frequency of the selected crystal.
Motorola AN-756 (5pp)

11 **"Low-Power Digital Frequency Synthesizers Utilizing COS/MOS ICs"**
(CD4000 Series)
Reviews digital phase-locked loops. Describes their implementation with CMOS for use in FM receiver synthesizers, both heterodyne and prescaling types.
RCA ICAN-6716 (15pp)

12 **"Phase-Locked Loop Design Fundamentals"**
(MC4016, MC4024, MC4044, MC4316, MC4324, MC4344)
Outlines fundamental-design concepts for phase locked loops implemented with ICs. Gives equations using Laplace Transforms needed to evaluate the basic loop performance and briefly describes a design using MC4000 series devices.
Motorola AN-535 (11pp)

13 **"Precision PLL System Using the XR2207 and the SR2208"**
(XR2207, XR2208)
Defines phase locked loop parameters and describes this two-chip PLL system. Includes circuit interconnections for both single supply and split-supply operation. Also gives PLL design equations.
Exar AN-06 (6pp)

©IC MASTER

LINEAR

Phase Locked Loops (cont)

1 **"SL650 Phase-Locked Loop Applications"**
(SL650, SL651)
Describes the circuit and application of this device that can operate to 0.5 MHz. Applications: Modulators-AM, FM, FSK, PAN, SCAM, tone burst, phase shift, delta, PWM, Waveform Generators-sine, triangle, mark/space ratio, staircase: Demodulators; Modem Systems, and a Digital Voltmeter.
Plessey Semiconductor SL650 Applications (32pp)

2 **"Sinusoidal Output from XR-215 Monolithic PLL Circuit"**
(XR215)
Discusses obtaining a sinusoidal output signal which is synchronozed to a desired reference or clock output using the device. Provides schematics of device and application.
Exar AN-09 (2pp)

3 **"The RCA COS/MOS Phase-Locked-Loop: A Versatile Building Block for Micro-Power Digital and Analog Applications"**
(CD4046A)
Discusses PLL basics, characteristics of device, and circuit elements. Describes application in FM demodulation, a frequency synthesizer, split-phase synchronization and decoding, and PLL lock detection.
RCA ICAN-6101 (4pp)

4 **"The Solid State Scientific Phase-Locked Loop"**
(SCL4046B, SCL4446B)
Reviews fundamentals and design considerations of phase-locked loops and briefly describes application in FM demodulation, frequency shift keying, PLL lock detection, AM detection, frequency synchronization, signal conditioning and frequency synthesis.
SSS AN-112 (15pp)

Photosensitive Devices

5 **"Applications of Reticon Photodiode Arrays in Electron and X-Ray Detectors"**
(RL Series)
Describes the use of self-scanning photodiode arays for detecting soft X-rays (1 to 10A) and electrons in the 10 to 100 KEV range.
Reticon AN-101 (4pp)

6 **"Light Sense"**
Covers optoelectronic sensors and systems including light activated switches and selfscanned photodiode arrays.
Integrated Photomatrix $12.95 (147pp)

Power Control

7 **"Applications of the VN10KM MOS Power FET"**
(VN10KM)
Reviews MOS power technology and characteristics, including load considerations, techniques for interfacing to logic circuits, drive techniques, and example applications.
Siliconix AN79-7 (8pp)

Power Control (cont)

8 **"Controlling Secondary Breakdown in Bipolar Transistors"**
(LT10)
Describes a resistive ballasting technique that allows bipolar single and Darlington power transistors to operate at higher voltages and power densities by controlling secondary breakdown.
National Semiconductor TP-16 (4pp)

"Features and Applications of RCA IC Zero-Voltage Switches"
See listing under (Interface) Switches. (RCA)

9 **"ICs for Phase and Burst Control of SCR of Triac"**
(L120, L121)
Examines 12 ICs which are suitable for SCR and Triac firing. Description includes diagrams, equations, and applications in ON-OFF control and proportional control.
SGS-ATES Technical Note 116 (12pp)

10 **"Motor Speed Applications Using the TDA1085A"**
(TDA1085A)
Discusses control of line-powered resistive and inductive loads using phase control in closed-loop system with tacho-frequency or analog voltage feedback.
Plessey Semiconductor (20pp)

11 **"Phase Control U111B"**
(U111B)
Provides detailed circuit description of bipolar IC forming the heart of a phase controller for varying power to household appliances. Includes example application for controlling universal motor speed.
AEG-Telefunken Halbleiter Informationsdienst 10.78 (16pp.)

12 **"Phase Control of AC Power with the SL440"**
(SL440)
Describes the operation of the SL440 power control circuit, and supply requirements. Applications include use with inductive loads, three phase systems, lighing, heating, motor and power supply control.
Plessey Semiconductor (38pp)

13 **"Some Applications of a Programmable Power Switch/Amplifier"**
(CA3094)
Brief circuit description of CA3094. Device delivers three watts average power, 10 watts peak power to external load. Applications include Class A power amplifiers and driver amplifiers for complementary transistors, wideband power multivibrators, oscillators, comparators, voltage regulators, analog timers, and motor-speed controllers.
RCA ICAN-6048 (12pp)

14 **"The Power MOSFET, a Breakthrough in Power Device Technology"**
(IVN5200, IVN5201)
Describes geometries of various power FET devices and discusses their operating limitations, linear characteristics, safe operating areas and radiation effects.
Intersil A033 (14pp)

15 **"Triac Phase Control Circuits"**
(MONOCHIP)
Illustrates a phase control circuit fabricated on a semi-custom chip. Device provides power supply, 60 Hz zero crossing detector and pulse generator, time delay ramp generator, and triac tigger pulse generator.
Interdesign APN-15 (7pp)

LINEAR

Power Control (cont)

1 **"Two-Point Driver to Temperature Controlling of Inductive Loads with U106BS"**
(U106BS)
Describes use of an integrated zero-crossing switch to control an air-conditioner compressor motor for maintaining a preset temperature.
AEG-Telefunken Halbleiter Informationsdienst 4.77 (4pp)

2 **"Using the Power MOSFET as a Switch"**
(IVN6000, IVN5200, IVN5001)
Details the fine points of power MOSFETs with discussions on switching and conduction characteristics, power loss and junction temperature calculation, 50A, dV/dt limitations and multiple device operation.
Intersil A036 (32pp)

3 **"Using the VN64GA High Current, High Power MOS Power FET"**
(VN64GA)
Covers geometry and operating characteristics of MOS power FETs; including examples of linear and switching applications.
Siliconix AN79-5 (6pp)

4 **"Zero-Voltage Switch U217B is Two-Step Temperature Controller with Superimposed Proportional Behavior"**
(U217B)
Offers circuit description and diagrams for applying a zero-voltage switch in a proportional temperature controller.
AEG-Telefunken Halbleiter Informationsdienst 12.78 (2pp.)

Power Supplies

5 **"Output Supervisory Circuits: A New Family of Power Supply Control Devices"**
(SG1543)
Describes ICs that monitor and control the outputs of sophisticated power supplies. Functions provided include overvoltage and undervoltage sensing, current sensing and SCR crowbar firing.
Silicon General AN1542, 1543, 1544, 3523 (8pp)

6 **"Power Supply Building blocks"**
(MONOCHIP)
Describes circuit blocks used in power supply circuits. They include: bandgap voltage regulator, bandgap reference, zener reference and amplifier, start-up circuit, differential amplifier stage, and Darlington pass transistor. Includes schematics.
Interdesign APN-18 (5pp)

7 **"Power Supply Circuits Head for Simplicity by Integration"**
Describes several integrated circuits designed specifically for simplifying switching power supply control and improving circuit reliability.
Silicon General (10pp)

8 **"Power Supply Design Using the ICL8211 and ICL8212"**
(ICL8211, ICL8212)
Describes use of these devices as positive and negative voltage regulators, constant current sources, high voltage and overvoltage protection circuits, supply window detectors and power failure-shutdown systems.
Intersil A027 (8pp)

Power Supplies (cont)

9 **"Power Switch Drivers: New IC Interface Building Blocks for Switched-Mode Converters"**
(SG1627, SG1629)
Details the characteristics and performance of the SG1627/9 designed to interface between the control circuitry for switch mode converters and their high power output stages.
Silicon General (8pp)

10 **"Protect Your Switchers with Digital Current Limiting"**
(SG1549)
Describes operation and application of a current sense latch IC in switching power supplies to provide pulse-by-pulse current limiting.
Silicon General ANSG1549 (4pp)

11 **"Switchmode Converter Topologies — Make Them Work for You"**
Provides a broad view of the variety of switch-mode converter topology options available. Discusses synthesis procedures for modifying known circuits and generating new circuits including duality, bilateral inversion and combinations of regulators and dc transformers.
Intersil A035 (32pp)

12 **"The Design of Switchmode Converters Above 100 kHz"**
Comprehensive discussion of circuit topology, components, and layouts in designing high frequency converters. Discusses cost tradeoffs and size/volume reduction tradeoffs.
Intersil A034 (20pp)

13 **"The Integration of Switching Power Supply Circuitry"**
(SG1525/1527, SG1526)
Reviews past approaches for controlling switching power supplies, and describes new ICs with integrated control/driver functions.
Silicon General (9pp)

14 **"The Output Supervisory Circuit: A New Analog LSI Circuit For Power Supply Control"**
(SG1543, SG2543, SG3543)
Describes the SG1543, an IC that monitors and controls the output of a power supply system. Includes diagrams, schematics and typical applications.
Silicon General (7pp)

Preamplifiers

"Audio Handbook"
See listing under (Linear) Consumer, Audio (National)

15 **"Audio Preamplifiers"**
(MONOCHIP)
Provides schematics and parameters for using the device in three separate preamplifier configurations.
Interdesign APN-11 (6pp)

LINEAR

Regulators

1 **"A New Approach to Switching Regulators"**
Describes a 24 volt 3 ampere switching mode supply which operates at 20 kHz from as 120 volt AC line with 70% efficiency. Briefly discusses load-line shaping to reduce power losses and to reduce noise.
Motorola AN-719 (11pp)

2 **"A Switching Regulator Using the SH1605"**
(SH1605)
Discusses switching regulator theory, device parameters, and a design example.
Fairchild AN-341 (3pp)

3 **"Applications of the CA3085 Series Monolithic IC Voltage Regulators"**
(CA3085)
Circuit description of positive regulators with output currents up to 100 milliamperes from −55°C to +125°C. Applications include high-current and constant-current regulators; switching, dual-tracking and high-voltage regulators. Use as a general purpose amplifier, and various methods of current limiting are mentioned.
RCA ICAN-6157 (11pp)

4 **"CA1524G Series Offers Efficiency in Power-Supply Designs"**
(CA1524G)
Describes the features, capabilities, and operation of the CA1524G series of pulse-width-modulated switching regulators and explains the advantages offered by this series in switching power-supply designs. Also lists power devices recommended for use with CA1524G-series IC's in various switching power-supply configurations.
RCA MSR-310 (12pp) .65¢

5 **"Control Circuit Unit and Application Manual"**
(uPC1042)
Describes control circuit unit used for board testing of the switching regulator control circuit (μPC1042). Provides application schematics, components table, and wiring diagrams.
NEC Electron (5pp)

6 **"Designing Around the L200 Variable Voltage/Current Regulator IC"**
(L200)
Discusses circuit designs for variable voltage and current regulators, motor-speed control, remote voltage control and battery chargers.
SGS-ATES DN318 (7pp)

7 **"L200 1A/15V Switch Mode Regulator"**
(L200)
Provides circuit-design equations and discusses application constraints for using a programmable voltage and current regulator as a switching power-supply regulator.
SGS-ATES DN319 (8pp)

Regulators (cont)

8 **"MOE 6047 Building Block"**
(MONOCHIP)
Discusses circuit with a bandgap regulator and matched current sources for use in D/A converters or as precision current sources. Provides schematics and test data.
Interdesign APN-19 (5pp)

9 **"Protect your Switchers with Digital Current Limiting: A New Current Sense Latch IC Provides Pulse-by-Pulse Control"**
(SG1524)
Discusses operation of a current sensing latch that operates at power supply switching frequencies for fast turn-off on current overload.
Silicon General SG1524 (4pp)

10 **"Resolving the Problems of Switching Mode Power Supplies with the ZN1066"**
(ZN1066)
Describes switching mode power supplies and problems involved in using, including current limit and switching transistor protection, low voltage cutoff, and impulse starting.
Ferranti (20pp)

11 **"The 4195 Regulator"**
(RC4195, RM4195)
Describes application as a ±15 v, 100 ma regulator; a ±2.5 a regulator; a ±15 to ±150 v unit, or a complementary ±3 to ±27 v device.
Raytheon Semiconductor (9pp)

12 **"Using a Dual-Polarity, Tracking Voltage Regulator"**
(SG1501, SG2501, SG3501)
Describes the circuit and use of the SG1501 series of dual regulators.
Silicon General Applications Bulletin 1 (6pp)

13 **"Voltage Regulator Handbook"**
(LM109, LM117, LM120, LM123, LM125, LM129, LM136, LM137, LM150, LM199, LM320, LM340, LM341, LM7800, LM78L00)
Covers product selection; heat flow and thermal resistance; commercial and custom heat sinks; applications of positive, negative and dual regulators; power supply design and includes data sheets for the product families listed above.
National Voltage Regulator Handbook, $7.00 (139pp)

14 **"μA78S40 Switching Voltage Regulator Applications (Revised)"**
(uA78S40)
Introduces device parameters and operations. Includes design equations and block diagrams.
Fairchild AN-344 (13pp)

LINEAR

Thermal Considerations

1 **"A Simple Thermal Analysis Program for Integrated Circuits"**
(MONOCHIP)
Presents a thermal analysis program for determining the temperature at any point on an IC.
Interdesign APN-16 (7pp)

"Low Cost LED Thermometer"
See listing under (Linear) Transducers. (National)

"Micropower Thermometer"
See listing under (Linear) Transducers. (National)

2 **"Mounting Procedure for, and Thermal Aspects of, Thermopad Plastic Power Devices"**
Covers various methods of mounting and heat-sinking Motorola case number 77, 90, and 199 plastic power devices. Also discusses thermal resistance considerations, lead forming, and circuit board cleaning.
Motorola AN-290B (9pp)

3 **"Mounting Techniques for Metal Packaged Power Semiconductors"**
Discusses preparation of mounting surfaces, using thermal compounds, and fastening techniques. Gives typical interface thermal resistance for a number of packages.
Motorola AN-599 (5pp)

4 **"Transient Thermal Resistance—General Data and Its Use"**
Discusses transient thermal resistance and its use and describes methods using various degrees of approximations to determine the junction temperature rise of a device. Also covers the concept of a duty cycle family of curves to simplify calculation of junction temperature rise under a repetitive pulse train.
Motorola AN-569 (15pp)

Timers

5 **"A 4-Digit, 7-Function Stop Watch/Timer"**
(MM5865)
Gives detailed instructions for the circuit and construction of a 4-digit, 7-function timer with a display resolution of 0.01, 0.1, and 1 second, using the MM5865.
National MOS/LSI Databook AN-169 (14pp)

6 **"MM5865 Universal Timer Applications"**
(MM5865)
Provides block diagram and system description, discusses general timing and programming capabilities, suggests timing and counting applications.
National MOS/LSI Databook AN-168 (10pp)

7 **"Precision Timer"**
(ZN1034E)
Explains the device and its use in various applications including a wiper control, a metronome, and a battery charger.
Ferranti Electric (19pp)

Timers (cont)

8 **"Single-Chip Frequency Synthesizer Employing the XR2240"**
(XR2240)
Describes use of this timer/counter as a single-chip frequency synthesizer: fo = f, (m/n + 1) Where fo <200 kHz. Describes generating 100 Hz synchronized to 60 Hz line.
Exar AN-07 (3pp)

9 **"The LX1602A Pressure Transducer and Altimeter Applications"**
(LX1602A)
Describes how to use this transducer along with additional electronics to build an altimeter that operates over a range of −1,000 feet to +50,000 feet.
National AN-91 (3pp)

10 **"Using National Clock Integrated Circuits in Timer Applications"**
(MM5309, MM5311, MM5312, MM5315)
Describes demultiplexing techniques to generate time intervals and low frequency square waves. Gives as an example a failsafe lighting timer.
National MOS/LSI Databook AN-143 (4pp)

Transducers

11 **"Accuracies of the AD590"**
(AD590)
Tables of maximum errors for device by grade involving limited temperature spans.
Analog Devices (4pp)

12 **"Application Circuits of Temperature Sensor and Temperature Controller IC's"**
(uPC616, uPC3911)
Provides device characteristics and four basic applications with diagrams.
NEC Electron (6pp)

13 **"Crystal Oven Controller and Precision Voltage Reference"**
(LM199, LM299, LM399, LM199A, LM299A, LM399A)
Shows the use of the LM199 both as an oven temperature controller and a voltage reference at the same time.
National Linear Applications Handbook LB-31 (2pp)

14 **"Installation Ideas for Pressure Transducers"**
(LX1600, LX1700, LX1400, LX1701)
Provides suggestions for mounting National transducers for various applications. Includes diagrams and typical mounting configurations.
National AN-92 (4pp)

15 **"LX Series Pressure Transducers: Design and Applications Information"**
(LX1600A, LX1601A, LX1602A)
Describes hybrid transducer circuit and applications, including pressure to frequency converter, latching altitude detector, digital readout barometer and altimeter.
National AN-94 (8pp)

© IC MASTER

LINEAR

Transducers (cont)

1 **"Pressure Transducer Handbook"**
Supplies product descriptions and talks about related topics including installation, fluid flow, auto-referencing and signal conditioning. Covers applications in the acoustic, medical, and automotive areas.
National Semiconductor $3 (130pp)

2 **"Pressure Transducer Load Cell"**
(LX1700G)
Describes use of LX1700G pressure transducer to measure weight.
National AN-95 (4pp)

3 **"Pressure Transducers as Accelerometers"**
(LX1700G)
Discusses uses of accelerometers and describes scheme of converting LX series pressure transducers to cover ranges from fractions to thousands of g's.
National AN-96 (4pp)

4 **"REF-02 Temperature Controller"**
(CMP-02, REF-02)
Describes temperature control using the REF-02 and the CMP-02 comparator.
Precision Monolithics AB-4 (1pp)

5 **"The Multi-Level Switch Kit, Part No. SK1007"**
Details the use of any LX series pressure transducer to produce a high level analog output as well as three independent switch points.
National TB-1 (2pp)

6 **"Thermometer Application of the REF-02"**
(REF-02)
Discusses thermometer essentials bandgap voltage reference theory, and basic circuit design using device.
Precision Monolithics AN-18 (4pp)

7 **"Transducer Fluid Filled Option"**
Describes the "Fluid-Filled" methods of protecting transducers from hostile environments. Rates the resistance of silicone rubber to some common fluids.
National TB-8 (2pp)

8 **"Transducer Interfacing Handbook"**
Basic guide to analog signal conditioning required to excite and amplify the output of commonly used input transducers. Describes over 100 applications to the most popular kinds of transducers for sensing temperature, pressure, force, flow and level.
Analog Devices $14.50 (254pp)

9 **"Transducer Sensor Diaphragm 15 Million Cycle Life Test"**
Findings in the continuing test of National's transducer sensing elements—a silicon membrane approx. 1 mil thick.
National TB-3 (1pp)

Transducers (cont)

10 **"Transducers in Fluid Flow Applications"**
(LX1602A)
Discusses application of LX1602A in pressure vessel, open flow and closed flow applications.
National AN-93 (8pp)

11 **"Use of the SK1007 Pressure Transducer Kit in Vault Alarm Systems"**
Describes application of this multi-level switch kit with a pressure transducer in vault alarm systems.
National TB-7 (2pp)

Voltage References

12 **"A Micropower Voltage Reference"**
Describes a voltage reference made by operating a JFET slightly below pinch-off along with an op amp to convert current to voltage.
National Linear Applications Handbook LB-34 (2pp)

"Crystal Oven Controller and Precision Voltage Reference"
See listing under (Linear) Transducers (National)

MEMORY

Analog

1 **"A Programmable Binary-Analog Correlator"**
(BAC-32)
Describes device and its capability to perform various mathematical operations like convolution and correlation. Applications such as filtering, correlation, decoding, and chirp detection are shown.
Reticon AN-106 (14pp)

2 **"A Tapped Analog Delay for Sampled Data Signal Processing"**
Introduces tapped analog delays and gives various applications previously accomplished by digital techniques.
Reticon AN-105 (11pp)

3 **"A Time Base Compressor for Low-Frequency Chirp-Z Transforms"**
(R5601)
Examines time base compression (TBC) of data recorded for analysis. Illustrates implementation of a TBC system using the device and low-cost digital memories. Block and timing diagrams are supplied.
Reticon AN-115 (18pp)

4 **"Acoustic Applications of Serial Analog Delay Devices"**
(SAD1024)
Covers use in reverberation, vibrato, chorus, wow and flutter control plus considerations in using this device.
Reticon AN-104A (8pp)

5 **"Analog Analog Correlator/Convolver"**
Presents an LSI discrete-time processing device capable of performing the convolution or correlation of two analog signals at clock rates up to 5 MHz.
Reticon AN-116 (4pp)

6 **"Charge Transfer Devices for Sampled-Data Processing"**
Discusses the application of charge transfer devices to analog and digital signal processing. Compares CTD devices. Describes Tapped Analog Delay, the Binary Analog Correlator, the Analog Correlator and the Transversal Filter.
Reticon AN-114 (11pp)

7 **"MOS Delay Lines"**
(DM8000, DM8510, DM8830)
Covers use of MOS shift registers to build delay lines.
National MB-4 (2pp)

8 **"Serial Operation of Clocked Analog Delay Lines to Obtain Long Delay"**
(SAD1024A)
Describes advantages, coupling, and performance of device.
Reticon AN-109 (8pp)

Character Generators

9 **"128 Characters with the DM8678"**
(DM8678)
Describes the control logic necessary to generate 128 characters and attributes.
National Memory Applications Handbook (9pp)

10 **"7 x 9 Display Character Generator"**
Uses three MOS ROMs and some TTL logic to create a font of 64 7 x 9 dot-type characters. A circuit diagram and suggested character forms are provided.
National MB-13 (2pp)

11 **"DM8678 Bipolar Character Generator"**
(DM8678)
Explains the operation of the device and the various features which include circuit address latches, the line counter, the 7-bit shift register, and the output buffer.
National AN-167 (4pp)

12 **"DM8678 Character Generator Emulator"**
(DM8678)
Describes a field programmable emulator to be used when developing new character fonts or graphic symbol sets for the DM8678.
National Memory Applications Handbook (2pp)

13 **"Digital Display Systems"**
Using TTL compatible MOS ROMs to generate displays. Gives circuit diagrams and a sample readout.
National MB-8 (2pp)

"The Systems Approach to Character Generators"
See listing under (Memory) ROMs. (National)

EAROMs

14 **"Data Retention Testing of ER3400"**
(ER3400)
Describes nondestructive analog-test procedure for determining EAROM data-retention capability.
General Instrument Bulletin 1210 (1pp)

15 **"EAROMs Replace Mechanical Switches"**
(ER1400)
Reports how CRT terminal makers use EAROMs to replace DIP switches to lower costs, reduce parts count, improve reliability and obtain field programmability of hardware options.
General Instrument Bulletin 1209 (3pp)

16 **"Electronic Digital Lock"**
(ER2050)
Schematic and description of an 8-digit electronic lock that has 4 different "open" codes and a programming mode that allows any of the codes to be changed.
General Instrument Bulletin 1206 (3pp)

© IC MASTER

MEMORY

EAROMs (cont)

1 **"Microprocessor Interface to the NCR 3400 Word Alterable ROM"**
(3400)
Block diagrams and discussion show how to interface an MNOS memory chip to the 8085, 8088 and 8086 microprocessors.
NCR (3pp)

2 **"Microprocessor Interfaces to the ER1400 EAROM"**
(ER1400)
Shows how to interface a serial I/O EAROM with four popular microprocessors using a variety of techniques.
General Instrument Bulletin 1207B (5pp)

3 **"NC7033 Interfacing with Microprocessors"**
(NC7033)
Gives theory of operation for MNOS memory transistors and discusses typical applications. Emphasizes direct interfacing techniques for the 8085 and 8080 microprocessors. Tables provide main program routines, subroutines and key sequences.
Nitron AN-101

4 **"NCR High-Density Nonvolatile Memory Family"**
(2168, 2161, 1734)
Discusses timing considerations and provides circuit diagrams and instructions for operating WAROMs, EAROMs and NVROMs with a microprocessor.
NCR (10pp)

5 **"The Role of Non-Volatile Memories in Consumer Electronics"**
Briefly describes MNOS technology, updating EAROMs, and use of EAROMs to store data, to keep track of system status, and store programs for microcontrollers.
General Instrument Bulletin 1202 (3pp)

General

6 **"10155 Content Addressable Memory (CAM)"**
Because of the associative architecture of the CAM, it is ideally suited for data "search" operations. The CAM has been found useful in applications such as file operations, list searching, traffic control, artificial intelligence, language translation, matrix manipulations, and cache memory control.
Signetics AN-004 (8pp)

7 **"Applying Modern Clock Drivers to MOS Memories"**
(DS0025, DS0026)
Covers use of 0025/26 drivers in MOS memory systems. Information includes selection of packages and heat sinks, power dissipation, rise and fall time, power supply decoupling, system clock line ringing and crosstalk, input coupling techniques, and sample calculations.
National Special Functions Databook AN-76 (12pp)

8 **"Error Detection and Correction Using SN54/74LS630 or SN54/74LS631"**
(SN54LS630, SN54LS631, SN74LS630, SN74LS631)
Discusses the need for improved error detection systems and the use of the SN54/74LS630/1 for reducing downtime in large memory boards.
Texas Instruments CA-201 (18pp)

General (cont)

9 **"Memory Applications Handbook"**
Contains assorted applications material on memory products manufactured by National Semiconductor. Individual application notes described and listed elsewhere.
National $11.00 (206pp)

10 **"Semiconductors for Plated-Wire Memories"**
(MC4006, MC4007, MC4038, MC4040, MC4043, MC1514, MC1546)
Discusses operation and electrical characteristics of plated wire memories. Covers applications of drivers, sense amplifiers, and decoders as interface circuits. Also discusses memory organization and memory-related semiconductor applications.
Motorola AN-533 (15pp)

11 **"Using Slower Memories with the VIS Display System"**
(CDP1869, CDP1870)
The scheme described nearly doubles memory access time of the system and permits use of memories approximately half as fast as those normally required with the VIS system.
RCA ICAN-6889 (4pp)

Microprogramming

"How to Design with the 8X02 Control Store Sequencer"
See listing under (Microprocessor) Systems (Signetics)

"Signetics Micro Assembler Reference Manual"
See listing under (Microprocessor) Programming (Signetics)

"Tri-State Logic in High Speed Memories of Microprogrammed Computers"
See listing under (Digital) TTL, General (National)

PROMs

12 **"32K EPROM Decision TMS2532 or Intel 2732"**
(TMS2532, 2732)
Compares two devices as to operation, microprocessor compatibility, plus timing and electrical parameters.
Texas Instruments Application Report MM9010 (12pp)

13 **"A Guide to Implementing Logic Functions Using PROMs"**
Illustrates techniques for using PROMs to efficiently emulate logic functions. Block diagrams provided.
National Memory Applications Handbook (4pp)

14 **"A PROM Programmer for the SC/MP LCDs"**
(MM4204, MM5204)
Provides a method for the user of the SC/MP LCDs to program MM4204 PROMs. Using wire-wrap techniques the user can construct a programmer that plugs into the SC/MP LCDs backplane and programs a 512 x 8 PROM in 10 seconds.
National Memory Applications Handbook AN-189 (23pp)

MEMORY

PROMs (cont)

1 **"Bipolar Generic PROMs"**
(Am27LS18, Am27LS19, Am27S18, Am27S19, Am27S50, Am27S21, Am27S12, Am27S13, Am27S15, Am27S25, Am27S26, Am27S27, Am27S28, Am27S29, Am27S30, Am27S31, Am27S32, Am27S33, Am27S810, Am27S181, Am27S184, Am27S185)
Includes a bipolar PROM cross-reference guide and a technical report that reviews manufacturing processes, circuit design techniques, testing, fuse element and reliability of generic bipolar PROMs.
Advanced Micro Devices AM-BUB094 (100p)

"Intel Memory Design Handbook"
See listing under (Memory) RAMs (Intel)

2 **"Interfacing the HM6641 with the NSC800"**
(HM6641)
The HM6641 is a CMOS PROM utilizing the polysilicon fuse technology. This paper discusses interfacing the 6641 with the 8 bit microprocessor, the NSC800.
Harris Semiconductor AN-103

3 **"PROM Power Switching Alternatives"**
Describes circuits for external power switching of Tri-State bipolar PROMs to reduce average power requirements. Circuits directly interface active data bus.
National Semiconductor AN229 (6pp)

4 **"PROM Power-Down Circuits"**
(DM74S287)
Describes several ways to power-down bipolar, three-state PROMs.
National AN-171 (4pp)

5 **"Programming 2732 PROMs with the CDP18S480 PROM Programmer"**
(CDP18S480)
Describes procedure for programming 2732 PROMs with the CDP18S480 PROM programmer.
RCA ICAN-6847 (4pp)

6 **"Understanding and Using the CDP18U42 EPROM"**
(CDP18U42)
Cover design and programming characteristics of a 256 x 8-bit nonvolatile, UV EPROM; includes discussions on programmer circuit options and device applications.
RCA ICAN-6925 (8pp)

RAMS

7 **"The Nonvolatile RAM for Microprocessor Applications"**
(M193, M120)
Compares cell structure and operation of EPROMs, EAROMs, and NVRAMs. Emphasizes NVRAM applications.
SGS-ATES DN317 (15pp)

RAMs (cont)

8 **"1K CMOS RAMs"**
(MM54C920, MM54C921, MM74C920, MM74C921, MM54C929, MM74C929, MM54C930, MM74C930)
Presents considerations for designing with CMOS RAMs. Considers synch vs asynch memory, memory structure and timing, and characteristics of devices.
National Memory Applications Handbook (13pp)

9 **"64k Dynamic RAM Memory Board with Transparent Refresh"**
(MCM4116, MC3242, MC3480)
Describes circuits for implementing hardware-refreshed 64k dynamic memory board for use with 6800 or 6809-based systems.
Motorola Semiconductor AN-835 (7pp)

10 **"A CMOS Keyboard Data Entry System for Bus Oriented Memory Systems"**
(MC14419)
Describes a keypad to binary data entry system for placing data in RAM memories. It allows data to be entered through keystrokes encoding 4-bits at a time.
Motorola Application Note AN-759 (4pp)

"A High Speed FIFO Memory Using the MECL MC10143 Register File"
See listing under (Digital) High Speed Logic (Motorola)

11 **"A Memory Design for an 8080A-Based Microprocessor System"**
(INS8080A, MM5290)
Describes a memory design for a system with up to 64 bytes of R/W memory in 16 kbyte increments. Provision is made for further address decoding (up to 1 megabyte). Includes schematics, timing diagrams.
National Memory Applications Handbook (8pp)

12 **"A Method of Implementing Stacks with Existing Minicomputer Memory"**
Gives detailed description of a controller for a stack of programmable size up to 256 words for a 16-bit minicomputer with less than 16K of memory. Tells how stack size can be increased to 4096 words by adding ten ICs.
National AN-60 (4pp)

13 **"A Non-Volatile Microprocessor Memory Using 4K N-Channel MOS RAMs"**
(MCM6605, MC6800)
Describes the design of a 8192-byte non-volatile memory using the MCM6605 4K x 1 RAM and CMOS control logic to reduce the power requirement in the standby mode.
Motorola AN-732A (17pp)

14 **"Application of First-In First-Out Memories"**
(AM2812, AM2813, AM2814, 3341)
Describes the function of a first-in, first-out memory, methods of constructing FIFO buffers and the operation of the above P-channel MOS devices. Discusses storage and control, expansion methods, interfacing, and applications in an N-bit shift register and as a key encoder on key matrix.
Advanced Micro Devices Application Note (9pp)

© IC MASTER

MEMORY

RAMs (cont)

1 **"Applications for HM6505"**
(HM6505)
A technical brief of the uses and operation of this CMOS RAM. Microprocessor and battery backup applications are discussed.
Harris Semiconductor AN-102

2 **"Applications of the Intel 2104A 4K RAM"**
(2104A)
Discusses operation of the device including power distribution and decoupling.
Intel Application Note AP-23 (13pp)

3 **"Battery Back Up Considerations Using NEC CMOS RAMs"**
Discusses basic battery types available and their application to battery back up with NEC SMOS memory.
NEC Microcomputers AN11 (5pp)

4 **"Charge Pump Driver for 7001 RAMs"**
(SN54508)
Defines a method for driving the charge storage pump input of a 7001 RAM. Provides a description of the basic storage pump RAM cell and the charge pump circuit diagram. Gives performance curves.
Texas Instruments Application Report CA-178 (6pp)

5 **"Designing Minimum/Nonvolatile Memory Systems with CMOS Static RAMs"**
(CDP1800)
Details system considerations and circuit requirements for CDP-1800 series RAM operation and data retention in CDP1802-based systems. Discusses interfacing complexity vs memory size, power distribution, power-up/power-down control and battery selection.
RCA ICAN-6943 (25pp)

6 **"Designing with 16K and 64K Dynamic RAMs"**
(NMC4164, NMC5295)
Discusses design procedures using multiplexed-address, dynamic RAMs. Describes basic functions and RAM controller operation. Provides extensive electrical and timing diagrams.
National AN228 (16pp)

7 **"Designing with AMI's High Speed S2114H 1024x4 bit Static RAM"**
(S2114H)
Describes device and its use. Supplies block diagram, operating modes and timing diagrams.
American Microsystems (3pp)

8 **"Dynamic RAM Board Design Made Easy"**
Discusses RAM chip characteristics, power supply and control signal distribution on PC boards, and control logic implementation. With schematics, PC layout.
National Memory Applications Handbook (9pp)

9 **"High Speed TTL Interfacing for 7001 Static RAMs"**
(SN75261, SN75365)
Illustrates interface techniques for driving the 7001 RAM chip-select input, and sensing the memory output.
Texas Instruments Application Report CA-179 (8pp)

RAMs (cont)

10 **"Improved Performance with the AM9124"**
(AM9124)
Discusses device advantages over the 2114, including power and dc parameters, and memory system design incorporating the device.
Advanced Micro Devices (6pp)

11 **"Intel Memory Design Handbook"**
(1103, 2107A, 2107B, 2416, 3207A, 3222, 3245, 5101, 5235, 5244)
Combines various RAM, ROM, PROM and CCD application notes plus information on support circuits.
Intel $5.00 (265pp)

12 **"Interfacing Static R/W Memories to the 8080A"**
(INS8080A)
Considers addressing techniques and memory interfacing for the 8080A family.
National Memory Applications Handbook (4pp)

13 **"Interfacing the 6800 Microprocessor to National MM74C910 Memory"**
(MC6800, MM74C910)
Outlines an area navigation system for aircraft using the devices.
National Memory Applications Handbook (2pp)

14 **"MOS Scratch Pad/Content Addressable Memory System"**
Describes a 64-bit Scratch Pad/Content Addressable Memory using MOS devices. Includes circuit diagrams and discusses circuit operations.
National MB-11 (2pp)

15 **"Memory Systems Characteristics and Applications for the CD4061A"**
(CD4061A)
Describes basic device operation, application in memory systems, and testing including construction of an all CMOS memory tester.
RCA ICAN-6445

16 **"Power Reduction Techniques for CMOS RAMs"**
(SCM5101)
Discusses RAM structure, chip deselection, input voltage levels, dynamic power dissipation and low voltage data retention as they relate to reducing power consumption.
Solid State Scientific AN-200 (11pp)

17 **"Software Refresh Memory Board for an MC6809 System"**
(MCM4116, MCM4027, MCM6664)
Describes hardware and software for implementing a software-refreshed dynamic memory board for use with 6809-based systems.
Motorola Semiconductor AN-833 (5pp)

18 **"Software Refreshed Memory Card for the MC68000"**
(MC68000, MCM4116, MCM6664)
Describes hardware and software for implementing a software-refreshed, dynamic memory card using 16k or 64k RAMs for use in an 8-MHz MC68000 system.
Motorola Semiconductor AN-816 (6pp)

19 **"Static RAM Applications"**
(INS8900, MM5257)
Discusses memory support for a μP and power down for RAMs.
National Memory Applications Handbook (2pp)

MEMORY

RAMs (cont)

1 **"The 5-Volt, 64K Dynamic RAM is Here, So is The 32K, So is The 16K!!!"**
(MCM4516/17, MCM6664/65, MCM6634)
Provides diagrams and instructions for optimizing memory-board layout using three types of RAMs in an expandable system. Emphasizes planning of addressing at the card edge, and physical and logical row selection on the card.
Motorola AN-805 (5pp)

2 **"The AM9338 Multiple Port Memory"**
(9338)
Describes applications for this 8-word by 1-bit three-address memory, including the working store for high-speed, three address computers; first in, first out (asynchronous buffer) memory; and direct address/indirect address memory.
Advanced Micro Devices Application Note 4 (pp)

3 **"The Design of an N-Channel 16K x 16-Bit Memory System for the PDP-11"**
(MCM6605, MC3450, MC3452, MC3459, MC3460)
Briefly describes operation of the MCM6605 NMOS RAM, the details, the design of a PDP-11 add-on mainframe memory using this device. The interface ICs and system performance are also discussed.
Motorola AN-740 (15pp)

4 **"Understanding the FIFO"**
(3351)
Covers 3351 FIFO operation, cascading, plus use in data rate buffering; parallel operation, and burst operation.
Fairchild APP 332 (8pp)

5 **"Use of CMOS RAM CDP1824 with RCA Microprocessor Evaluation Kit 18S020"**
(CDP1824)
Describes the CDP1824 and its application in the CDP18S020 Evaluation Kit, and presents examples of how the CDP1824 can be combined with the CDP1831 ROM to form efficient ROM-RAM systems.
RCA ICAN-6537 (4pp)

6 **"Use of CMOS-SOS RAM CDP1822 with RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1822)
Describes the CDP1822, its operation, and its application in the CDP18S020 Evaluation Kit.
RCA ICAN-6539 (4pp)

7 **"Using Synchronous Static CMOS RAMs"**
A detailed study of the design techniques required for high performance, low power, CMOS RAM arrays. An example array design is presented, and interfacing to common microprocessors is discussed.
Harris Semiconductor AN-101

8 **"Using Tri State® Logic for Rubber Band Memories"**
Describes the construction and use of scratch/pad memories to store data at a rapid rate and then release it as required. They serve as buffers between systems operating at different clock rates.
National AN-68 (4pp)

RAMs (cont)

9 **"Which Way for 16K?"**
Considers various aspects of 16K RAMs including 64 and 128 cycle refresh and the advantages versus disadvantages of latching.
Intel Application Note AP-22 (7pp)

ROMs

10 **"Custom ROM Programming"**
Gives forms for submitting truth tables for various National read only memories.
National AN-100 (8pp)

11 **"Designing With Signetics MOS ROM Family"**
Lists the advantages of designing with a generic printout family of EPROM/ROMs. Describes data and specifications of major lines of MOS ROM.
Signetics (50pp)

12 **"Fast Multipliers Using TTL Read Only Memories"**
(SN74182, SN74H183, SN74283, SN74284, SN74285)
Reviews fundamental algorithm of binary multiplication. Shows use of ROMs for multiplication, two's complement multiplication, and truncated multiplications.
Texas Instruments Application Report CA-172 (11pp)

"Intel Memory Design Handbook"
See listing under (Memory) RAMs (Intel)

"MOS Goes Bipolar"
See listing under (Memory) Shift Registers (National)

13 **"Monolithic Diode Matrices"**
Describes programming and use of diode matrices. Applications: teletypewriter coding matrix, decimal decode for displays, nines complement-BCD, shift register matrices, and ROMs.
Harris Semiconductor AN-206 (16pp)

14 **"NCR 3400 Data Retention Measurement"**
(3400)
Describes theory of operation and procedure for measuring change in threshold voltage in MNOS ROM memory cells with respect to time and read access stress.
NCR (2pp)

15 **"ROM Application Note"**
(EA8308A, EA8316E)
General discussion of ROMs and characteristics of each device.
Electronic Arrays (11pp)

16 **"Saving ROMs in High-Resolution Dot-Matrix Displays and Printers"**
(DM8596, MM8597)
Describes two-stage, column-generation approach called "intermediate coding" that saves more than 25% of ROM capacity when several ROMs are needed to store a font.
National AN-85 (8pp)

© IC MASTER

MEMORY

ROMs (cont)

"The Application of ROMs"
(MM5203)
Describes applications of read only memories in table look up, code conversion and generation, character generation, random logic generation, and microprogramming.
National AN-61 (12pp)

2 **"Trig Function Generators"**
Instead of simply cascading ROM to increase resolution and accuracy of the look-up tables, this note describes interpolation techniques to increase trig function accuracy with less memory.
National MB-10 (12pp)

3 **"Use of CMOS ROMs CDP1831 and CDP1832 with the RCA Microprocessor Evaluation Kit CDP18S020"**
(CDP1831, CDP1832)
Describes the operation and design of CDP1831- and CDP1832-based read-only memory systems in the CDP18S020.
RCA ICAN-6536 (4pp)

4 **"Use of CMOS ROMs CDP1833 and CDP1834 with the RCA Microprocessor Evaluation Kit CDP18S020 and the EK/Assembler-Editor Design Kit CDP18S024"**
(CDP1833, CDP1834)
Describes the application of the CDP1833 and CDP1834 in the CDP18S020 Evaluation Kit and the CDP18S024 EK/Assembler-Editor Kit.
RCA ICAN-6635 (4pp)

Shift Registers

"9338 8-Bit Multiple Port Register"
See listing under (Digital) TTL-General (Fairchild)

5 **"A Random Pattern Generator for Testing Digital Delay Elements"**
Describes the use of a linear feedback shift register for digital testing.
Advanced Micro Devices (3pp)

6 **"Applications of Dynamic Shift Registers"**
(1402A, 1403A, 1404A, 1405A, AM2802, AM2803, AM2804, AM2805, AM2806, AM2807, AM2808)
Discusses dynamic shift register storage in general, clock timing, circuits for clock drivers, interfacing with TTL, and recirculating registers.
Advanced Micro Devices (7pp)

"COS/MOS MSI Counter and Register Design and Applications"
See listing under (Digital) CMOS (RCA)

"HiNIL 375 Universal Shift Register"
See listing under (Digital) HNIL/HTL (Teledyne Semiconductor)

Shift Registers (cont)

7 **"High-Speed Shift Registers Use TTL RAMs and Counters to do all the Shifting"**
Describes how to build a high speed shift register using a RAM accessed by counters.
Advanced Micro Devices (2pp)

8 **"Schottky TTL MSI Registers"**
(AM25S07, AM25S08, AM25S09, SN54S174, SN54S175, SN54S194, SN54S195, SN74S174, SN74S175, SN74S194, SN74S195)
Describes these 4 and 6-bit registers, their operation and applications. Contains logic diagrams and function tables. Applications covered include: longer words, use with dynamic shift registers, selective bus storage, use as a LIFO memory, pseudo random feedback, unique counting codes, permutation of inputs, and use in arithmetic.
Advanced Micro Devices (16pp)

"The Logic Design of Shift Counters"
See listing under (Digital) Counters. (Motorola)

"Using Shift Registers as Pulse Delay Networks"
See listing under (Digital) High Speed Logic (Motorola) Microprocessors.

MILITARY PARTS DIRECTORY

This section is divided into three parts: a table of those manufacturers willing to perform MIL-STD-883 screening, a two way military to commercial cross reference index, and the Qualified Parts List broken down into functions. It not only shows what devices are on the list and which manufacturers supply them, but also it decodes the military numbers into familiar terms.

Detailed Product Information provided by:

Mirco Power Systems	401
National Semiconductor	402
RCA	408
Signetics	410
Synertek	424
Texas Instruments	433

The manufacturers listed above have provided detailed information on their latest and most significant products.

HOW TO USE THE MILITARY PARTS DIRECTORY

The next page contains a table showing the manufacturers who have advised that they want to screen devices to MIL-STD-883 and/or perform other environmental screening. The table also indicates which companies are currently qualified to supply one or more devices on the QPL list. Such achievement is apt to indicate that these companies are well equipped to perform 883 testing. The following four pages provide convenient cross references between M38510 numbers and their commercial equivalents; plus indication of which devices are listed in the latest QPL.

The heart of this section is the functional QPL parts list. It is based on the latest Defense Electronics Supply Center Qualified Products List (QPL-38510-XX) at the time of publication. The revision and date of this list are indicated at the bottom of each page. The devices are identified by major functions; within each function the devices are arranged in alphanumeric order, which automatically groups CMOS together, 5400 Series together, etc.

A complete military part number includes a three letter suffix signifying the device class and packaging. The definitions of these letters are given in the Part Number Guide under "JAN Nomenclature." The package styles and lead finishes that each manufacturer is qualified to supply can be determined by consulting the official QPL or by contacting the individual manufacturers. Once you have found the names of the companies you need to contact, you can reach them by using the information in the Manufacturers and Distributors Directory.

© IC MASTER 1983

VERZEICHNIS MILITÄRISCHER ICs

Dieser Abschnitt besteht aus drei Teilen: einem Verzeichnis de Hersteller, welche eine Prüfung nach Mil-Standard 883 vornehmen, eine sowohl militärische als auch kommerzielle Äquivalenzliste und die QPL-Listung nach Funktionen. Hier wird nicht nur genannt, welche Bauelemente verfügbar sind und wer sie liefert, sondern es werden außerdem militärische Typennummern in allgemeinverständliche umgeschlüsselt.

GEBRAUCHSANLEITUNG FÜR DAS VERZEICHNIS MILITÄRISCHER ICs

Die nächste Seite enthält eine Liste jener Hersteller, dia eine Prüfung nach MIL-Standard 883 vornehmen und/oder andere Tests für verschärfte Umweltbedingungen durchführen. Die Liste zeigt außerdem, welche Firmen gegenwärtig für die Lieferung von einem oder mehreren Bauteilen nach QPL qualifiziert sind. Eine solche Qualifikation ist ein Hinweis darauf, daß diese Firmen für eine Prüfung nach 883 gut ausgerüstet sind. Die folgenden vier Seiten enthalten praktische Äquivalenzlisten von M38510-Nummern zu deren kommerziellen Bezeichnungen mit einem Hinweis darauf, welche Bauteile in der neuesten QPL-Listung aufgeführt sind.

Das Kernstück dieses Abschnitts ist die QPL-Liste nach Funktionen. Sie basiert auf der neuesten Defense Electronics Supply Center Qualified Products List (QPL-385 10-XX) zum Zeitpunkt der Drucklegung. Die Ausgabe und das Datum dieser Liste werden am Ende jeder Seite angegeben. Die Bauteile sind nach den wichtigsten Funktionen geordnet. Innerhalb jeder Funktion werden sie in alphanumerischer Reihenfolge aufgeführt, so daß automatisch CMOS zusammen sind, 5400 Serien zusammen sind usw.

Eine Vollstandige Militärische Typennummer umfast ein Suffix von drei Bruchstaben, welche die Klassifizierung und Gehäuseform des Bauelements bedeuten. Diese Buchstaben werden im Numerischen Typenverzeichnis unter "JAN Nomenclature" erläutert. Die Gehäuseformen und Ausführung der Anschlüsse, die jeder Hersteller liefern darf, können über die offizielle QPL-Listung oder über die einzelnen Hersteller in Erfahrung gebracht werden. Haben Sie einmal die Namen der Firmen gefunden, die Sie brauchen, können Sie weitere Informationen über das Hersteller- und Distributoren-verzeichnis erhalten.

CATALOGUE DES PIECES MILITAIRES

Cette section est divisée en trois catégories : un tableau des fabricants se conformant à la méthode MIL-STD-883, un index de référence entre le domaine militaire et le domaine industriel, et une liste par fonction des pièces qualifiées (QPL). Non seulement les appareils figurant sur la liste et les noms de leurs fabricants sont indiqués, mais les numéros des pièces militaires sont décodés en des termes plus compréhensibles pour les industriels.

COMMENT SE SERVIR DU CATALOGUE DES PIECES MILITAIRES

La page suivante offre un tableau donnant les noms des fabricants désireux de sélectionner des appareils suivant la méthode MIL-STD-883, ou d'exécuter d'autres tests d'environnement. Ce tableau énumère également les sociétés actuellement qualifiées pour produire un ou plusieurs appareils figurant sur la Liste de Pièces Militaires (QPL). Il est sous-entendu que ces sociétés possèdent l'equipement nécessaire pour accomplir les tests éxigés par la méthode 883. Les quatre pages suivantes fournissent un index pratique de référence entre les numéros de la méthode M38510 et leurs équivalents industriels, ainsi que la liste des appareils figurant sur la QPL la plus récente.

Le coeur de cette section est la Liste des Pièces Qualifiées. Elle est basée sur l'edition las plus recente de la QPL publiée par le "Defense Electronics Supply Center" lors de la publication de ce catalogue (QPL-38510-XX). Le numéro et la date de révision de cette liste sont indiqués au bas de chaque page. Les appareils sont identifiés par fonctions principales. Dans chaque fonction les appareils sont indiqués par ordre alphanumérique, ce qui regroupe automatiquement les CMOS ensemble, les séries 5400 ensemble, etc. . .

Un numéro complet de pièce militaire comprend un suffixe de trois lettres qui détermine lat catégorie de l'appareil et le type de boitier utilisé. La définition de ces lettres est fournie dans le Guide des Numéros de Pièces (Part Number Guide) sous la nomenclature JAN. Les types de boitier et de finition que chaque fabricant est qualifié de produire, peuvent être déterminés en consultant la QPL officielle ou en contactant les fabricants respectifs. Une fois que vous connaissez les noms des sociétés que vous desirez contacter, vous pourrez en obtenir les adresses et numéros de téléphone en consultant l'Annuaire des Fabricants et Distributeurs (Manufacturers and Distributors Directory).

DIRECTORIO DE PARTES PARA USO MILITAR

Esta sección está dividada en tres partes: Una tabla de aquellos fabricantes que seleccionan componentes de acuerdo a la ESPECIFICATIÓN MILITAR-883*, un índice de referencia entre componentes militares y comerciales, y una Lista de partes subdividida en funciones. No solo muestra que componentes forman parte de la lista y que fabricantes la proveen, sino también traduce los números militares a términos familiares.

MODO DE EMPLEO DEL DIRECTORIO DE PARTES PARA USO MILITAR

La siguiente página contiene una tabla de fabricantes que desean seleccionar partes de acuerdo a la ESPECIFICACION MILITAR-883 y/o ejecutar otro tipo de segregación ambiental. La tabla también indica que compañías están calificadas para proveer una o más componentes en la lista QPL. Esta proeza es un indicio que dichas compañías están equipadas para ejecutar la prueba 883. Las siguientes cuatro páginas proveen referencias convenientes entre los números M3851 y sus equivalentes comerciales, además indica que componentes aparecen en la lista más reciente de QPL.

La importancia de esta sección está en la lista funcional de componentes QPL. Está basada en la lista de productos del Centro de Abastecimiento de Defensa Electronica más reciente (QPL-38510-XX) antes de su publicación. La revisión y fecha de esta lista aparecen al pie de cada página. Las componentes están identificadas de acuerdo a funciones; que a su vez están organizadas en ordén alfabético-numérico, que automáticamente agrupa las familias CMOS, 5400, etc.

La numeración completa de una componente militar incluye un sufijo de tres letras alfabéticas que determinan la clase y estilo constructivo de la componente. Las definiciones de estas letras se encuentran en la Guía de Numero de Pieza bajo "nomenclatura JAN." El estilo constructivo y acabado de las terminales que cada fabricante suple puede ser determinado consultando el QPL oficial o comunicándose con los fabricantes mismos. Después de haber averiguado los nombres de las compañías a las que deberá dirigirse, puede ponerse en contacto con ellos por medio del Directorio de Fabricantes y Distribuidores.

ミリタリー用部品録

このセクションは次の３部門に分れています。(1)ＭＩＬ-ＳＴＤ-８８３のスクリーニングをするメーカー表，(2)一般型名からミリタリー番号を，ミリタリー番号から一般型名を探し出すクロスリファレンス表，(3)機能別に分類された認定部品表，これは部品名丈でなくそのメーカー名とミリタリー番号のなじみの深い用語への対応も網羅しています。

使用方法

次ページにはＭＩＬ-ＳＴＤ-８８３並に他のスクリーニングをするメーカー名が記載されています。その表にはどのメーカーが現在ＱＰＬ（認定部品表）上のどんな製品の供給に認定されているかも示していますから，記載されているメーカーが８８３による試験設備を備えているかどうか判断することも出来ます。その後の４ページはミリタリーから一般型名，一般型名からミリタリーのクロスリファレンスで最新のＱＰＬに記載されている型名も分ります。

このセクションの最も大切な所は機能別ＱＰＬ部品リストです。これは本マスター発行時点で最新の国防省電子部品供給センター（ＤＥＳＣＥ）認定品リスト（ＱＰＬ-３８５１０-××）に基くものです。本リストの改定又は日付は各ページの下欄に示されています。デバイスは主要機能毎に記載されています。その機能毎にデバイスはアルファベット順にのっていますのでＣＭＯＳはＣＭＯＳ内に，５４００シリーズは５４００シリーズ内にまとめられています。

ミリタリー部品番号はデバイスのクラス分けパッケージ分けを示す３文字のサフィックスを入れています。この３文字の規定はパーツナンバーガイドのＪＡＮノーメンクラチュアに記載されています。各メーカーが認定されているパッケージ形状とリード仕上げは公式のＱＰＬを見るか個々のメーカーに連絡して下さい。連絡先の住所，電話番号等は〝メーカー，代理店ダイレクトリー〟にのせてあります。

EXPLANATION:

The "MIL-M-38510" section indicates the IC manufacturers currently providing Q.P.L. ICs. More detailed information on the specific devices is given in the Qualified Products lists which follow.

The "MIL-STD-883 Screening" section lists those manufacturers who are both set up and actively want to screen devices to the levels indicated. "Other Screening" shows those who report that they want business calling for special military and industrial environment screening procedures.

For applications ranging from shipboard and ground communication systems to avionics and missile control, Arrow inventories quality hi-rel products within a separate military warehouse system. Strict warehousing procedures, full traceability control and trained personnel support Arrow's multi-million dollar commitment to a growing demand for military electronic components. Arrow's broad inventory base meets or exceeds standards for MIL-38510 and 19500 and our on-line real time computerized inventory system quickly processes your order so we can ship it to you on time.

DIGITAL

ARITHMETIC FUNCTIONS

Device	M38510/	Description	Source
4008A	05401	4-Bit Full Adder	SSS
5480	00604	Gated Full Adder	Motorola
5482	00601	2-Bit Binary Full Adder	Motorola
5483	00602	4-Bit Binary Full Adder (Look-Ahead Carry)	Motorola, National, Signetics, TI
5485	15001	4-Bit Magnitude Comparator	Motorola, Signetics
54181, 9341	01101	Arithmetic Logic/ Function Generator	Motorola, National, Signetics
54182	01102	Look-Ahead Carry Generator	Motorola
54LS83A	31201	4-Bit Binary Full Adder	Fairchild, Motorola, TI
54LS85	31101	4 Bit Magnitude Comparator	Motorola, Signetics, TI
54LS283	31202	4 Bit Binary Full Adder	Fairchild, Motorola, TI
54S85	08201	4-Bit Magnitude Comparator	Signetics
54S181	07801	ALU/Function Generator	Signetics
9304	00603	Dual Full Adder	Motorola
9324	15002	4-Bit Magnitude Comparator	Motorola

BUFFERS, INVERTERS

4007A	05301	Dual Complementary Pair plus Inverter	National, RCA, SSS
4009A	05501	Hex Buffer/Converter, Inverting	SSS
4010A	05502	Hex Buffer/Converter, Non-Inverting	SSS
4049A	05503	Hex Buffer/Converter, Inverting	Motorola, National, RCA, SSS
4050A	05504	Hex Buffer/Converter, Non-Inverting	Motorola, National, RCA, SSS
4069UB	17401	Hex Inverter	RCA
4502B	17403	Hex Inverter/Buffer	RCA
5404	00105	Hex Inverter	Fairchild, Motorola National, Signetics, TI
5405	00108	Hex Inverter, O/C	Motorola, National, TI
5437	00302	Quad 2-Input NAND Buffer	Fairchild, Motorola, National, TI
5438	00303	Quad 2-Input NAND Buffer, O/C	Motoral, National, TI
5440	00301	Dual 4-Input NAND Buffer	Fairchild, Motorola National, TI
54126	15302	Quad Gated Buffer, TS	Signetics
54365	16301	Hex Buffer, TS	Signetics
54366	16302	Hex Inverter, TS	Signetics
54367	16303	Hex Buffer, Three State	Signetics
54368	16304	Hex Inverter, TS	Signetics
54H04	02305	Hex Inverter	Fairchild, Motorola, TI
54H40	02401	Dual 4-Input NAND Buffer	Motorola, TI
54LS04	30003	Hex Inverter	Fairchild, Motorola, National, Raytheon, Signetics, TI
54LS05	30004	Hex Inverter, O/C	Fairchild, Motorola, National, TI
54LS28	30204	Quad 2-Input NOR Buffer	Motorola
54LS37	30202	Quad 2-Input NAND Buffer	Motoroa, National Raytheon, Signetics, TI
54LS40	30201	Dual 4-Input NAND Buffer	Motorola, National, Raytheon, TI
54LS125	32301	Quad Gated Buffer, TS	Signetics, TI
54LS126	32302	Quad Gated Buffer, TS	TI
54LS365	32201	Hex Buffer, TS	Fairchild, Signetics, TI
54LS366	32202	Hex Inverter, TS	Fairchild, TI
54LS367	32203	Hex Buffer, TS	Fairchild, Motorola, Signetics, TI
54LS368	32204	Hex Inverter, TS	Fairchild, Motorola, Signetics, TI
54L04	02005	Hex Inverter	National
54S04	07003	Hex Inverter	Fairchild, Signetics, TI

BASED ON QPL-38510-54, 20 SEPTEMBER 1982

BUFFERS (cont)

Device	M38510/	Description	Source
54S05	07004	Hex Inverter, O/C	TI
54S40	07201	Dual 4-Input NAND Buffer	Fairchild, Signetics
935	03002	Hex Inverter	Fairchild
936	03003	Hex Inverter	Fairchild

COUNTERS

4017A	05601	Decade Counter/ Divider, Decoded Output	National, RCA, SSS
4018A	05602	Presettable Divide-by-N Counter	Motorola, National,
4020A	05603	14-Bit Binary Counter	Motorola, National, RCA
4022A	05604	Divide-by-8 Counter/ Divider, Decoded Output	National, RCA, SSS
4024A	05605	7-Bit Binary Counter	Motorola, National, RCA, SSS
5490	01307	Decade Counter, Ripple	Motorola, National
5492	01301	Divide-by-12 Counter (÷2, ÷6)	Motorola
5493	01302	4-Bit Binary Counter	Motorola, Signetics
54160	01303	Synchronous Decade Counter	Motorola, National, Signetics
54161	01306	Synchronous 4-Bit Binary Counter	Motorola, National, Signetics
54162	01305	Fully Synchronous Decade Counter	Motorola, National
54163	01304	Fully Synchronous 4-Bit Binary Counter	Motorola, National, Signetics
54192	01308	Decade Up/Down	Motorola
54193	01309	Decade Up/Down	Motorola, Signetics
54LS90	31501	Decade Counter	Motorola, Signetics, TI
54LS92	31510	Divide-by-12 Counter	Motorola, Signetics, TI
54LS93	31502	4-Bit Binary Counter	Signetics, TI
54LS160	31503	Synchronous Decade Counter	Motorola, TI
54LS161	31504	Synchronous 4-Bit Binary Counter	Motorola, Signetics, TI
54LS162	31511	Fully Synchronous Decade Counter	Motorola, TI
54LS163	31512	Fully Synchronous 4-Bit Binary Counter	Motorola, Signetics, TI
54LS190	31513	Synchronous Decade Up/Down Counter	Motorola, Signetics, TI
54LS191	31509	Synchronous Binary Up/Down Counter	Motorola, Signetics, TI
54LS192	31507	Decade Up/Down Counter	Motorola, Signetics, TI
54LS193	31508	Binary Up/Down Counter	Motorola, Signetics, TI
54LS197	32002	Binary Up Counter	Signetics
54LS290	32003	Decade Counter, Divide-by-2 and 5	Motorola, Signetics, TI
54LS390	32701	Dual Decade Counter, Ripple	TI
54LS293	32004	4-Bit Binary Counter, Ripple	Signetics, TI
54LS393	32702	Dual 4-Bit Binary Counter, Ripple	Signetics, TI
54LS490	32703	Dual Decade Counter, Ripple	Signetics, TI
54L90	02501	Decade Counter, Ripple	National
54L93	02502	4-Bit Binary Counter	National

DECODERS

5442	01001	BCD-to-Decimal Decoder	Fairchild, Motorola, National, Signetics
5443	01002	Excess 3-to-Decimal Decoder	Motorola
5444	01003	Excess 3-Gray-to-Decimal Decoder	Motorola
5445	01004	BCD-to-Decimal Decoder, O/C	Motorola
5446	01006	BCD-to-Decimal Decoder/Driver, 30V Output	National
5447	01007	BCD-to-Decimal Decoder/Driver, 15V Output	National
5448	01008	BCD-to-7 Segment Decoder/Driver with 30V Output	Motorola
5449	01009	BCD-to-7 Segment Decoder, O/C	Motorola
54145	01005	BCD-to-7 Segment Decoder	Motorola
54154, 9311	15201	4-Line to 16-Line Decoder/Demultiplexer	Motorola, Signetics

DECODERS (cont)

Device	M38510/	Description	Source
54155	15202	Dual 2-Line to 4-Line Decoder/Demultiplexer	Motorola
54156	15203	Dual 2-Line to 4-Line Decoder/Demultiplexer	Motorola
54LS138	30701	3-to-8-Line Decoder/ Demultiplexer	Fairchild, Motorola, Raytheon, Signetics, TI
54LS139	30702	Dual 2-Line to 4-Line Decoder/Demultiplexer	Fairchild, Motorola, TI
54LS148	36001	8-Input Priority Encoder	TI
54LS155	32601	Dual 2-to-4 Line Decoder/Demultiplexer	TI
54LS156	32602	Dual 2-to-4 Line Decoder/Demultiplexer	Motorola, Signetics, TI
54LS348	36002	8-Input Priority Encoder	TI
54LS42	30703	BCD to Decimal Decoder	Fairchild, Motorola, Signetics, TI
54LS47	30704	BCD to7-Segment Decoder	TI
54S139	07702	Dual 2-Line to 4-Line Decoder/Demultiplexer	Fairchild
9301	15206	BCD-to-Decimal Decoder	Motorola
9317	15802	BCD to 7-Segment Decoder/Driver	Fairchild
9318	15603	8-Input Priority Encoder	Motorola

DRIVERS

5406	00801	Hex Inverter Buffer/ Driver, O/C High Voltage Output	Motorola, National, TI
5407	00803	Hex Buffer/Driver, O/C High Voltage Output	Motorola, TI
5416	00802	Hex Inverter Buffer/ Driver, O/C High Voltage Output	Fairchild, Motorola, National, TI
5417	00804	Hex Buffer/Driver, O/C High Voltage Output	Fairchild, Motorola, TI
5426	00805	Quad 2-Input NAND Buffer/Driver, O/C, High Voltage Output	Signetics

FLIP-FLOPS

25LS174	33106	Hex D-Type Flip-Flop	Motorola, TI
25LS175	33107	Quad D-Type Flip-Flop	Motorola
4013A	05101	Dual "D" Flip-Flop with Set/Reset	Motorola, National, RCA, SSS
4027A	05102	Dual J-K Master-Slave Flip-Flop	Motorola, National, RCA, SSS
5470	00206	Positive Edge-Triggered J-K Flip-Flop	Motorola, TI
5472	00201	J-K Master Slave Flip-Flop (AND Inputs)	National, TI
5473	00202	Flip-Flop Dual J-K Master Slave	Motorola, National, Signetics, TI
5474	00205	Dual D-Type Edge-Triggered Flip-Flop	Fairchild, Motorola, National, Signetics, TI
5476	00204	Dual J-K Master Slave Flip-Flop with Preset and Clear	National, Signetics, TI
54107	00203	Dual J-K Master Slave Flip-Flop	Motorola, National, TI
54174	01701	Hex D-Type Flip-Flop	Fairchild, Motorola, Signetics
54175	01702	Quad D-Type Flip-Flop	Fairchild, Motorola, Signetics
54H72	02201	J-K Master-Slave Flip-Flop (AND Inputs)	Motorola
54H73	02202	Dual J-K Master-Slave Flip-Flop	Motorola
54H76	02204	Dual J-K Flip-Flop	TI
54H101	02205	J-K Negative Edge-Triggered Flip-Flop (AND-OR Inputs)	Motorola
54H103	02206	Dual J-K Negative Edge-Triggered Flip-Flop	Motorola
54LS73	30101	Dual J-K Master Slave Flip-Flop	Signetics, TI
54LS74	30102	Dual D-Type Positive Edge-Triggered Flip-Flop with Preset and Clear	Fairchild, Motorola, Signetics, TI
54LS76	30110	Dual J-K-Master Slave Flip-Flop with Preset and Clear	Signetics, TI
54LS107	30108	Dual Master Slave Flip-Flop	Motorola, Signetics, TI
54LS109	30109	Dual J-K Positive Edge-Triggered Flip-Flop with Preset and Clear	Fairchild, Motorola, Signetics, TI

BASED ON QPL-38510-54, 20 SEPTEMBER 1982

FLIP-FLOPS (cont)

Device	M38510/	Description	Source
54LS112	30103	Dual J-K Negaive Edge-Triggered Flip-Flop with Preset and Clear	Fairchild, Motorola, Signetics, TI
54LS113	30104	Dual J-K Negative Edge-Triggered Flip-Flop with Separate Preset and Clock	Fairchild, Motorola, Signetics, TI
54LS114	30105	Dual J-K Negative Edge-Triggered Flip-Flop with Clock, Clear, and Preset	Fairchild, Motorola, TI
54LS174	30106	Hex D-Type Flip-Flop	Fairchild, Motorola, Signetics, TI
54LS175	30107	Quad D-Type Edge-Triggered Flip-Flop with Clear	Fairchild, Motorola, Raytheon, Signetics, TI
54LS273	32501	Octal D-Type Edge-Triggered Flip-Flop with Clear	TI
54LS298	30909	Quad D-Type Flip-Flop with Multiplexed Dual Inputs	Signetics
54LS373	32502	Octal Transparent Latch	TI
54LS374	32503	Octal D-Type Edge-Triggered Flip-Flop, Three State	TI
54LS377	32504	Octal D-Type Flip-Flop with Enable	TI
54L71	02101	J-K Master-Slave Flip-Flop (AND-OR Inputs)	National
54L72	02102	J-K Master-Slave Flip-Flop (AND Inputs)	National
54L73	02103	Dual J-K Master-Slave Flip-Flop	National
54L74	02105	Dual D-Type Edge-Triggered Flip-Flop	National
54L78	02104	Dual J-K Master-Slave Flip-Flop	National
54S74	07101	Dual Flip-Flop	Fairchild, Signetics
54S112	07102	Dual J-K Negative Edge-Triggered Flip-Flop	Signetics
54S113	07103	Dual J-K Negative Edge-Triggered Flip-Flop Separate Preset and Clock	Signetics
54S174	07105	Hex D-Type Flip-Flop	AMD, Fairchild
54S175	07106	Quad D-Type Flip-Flop	AMD, Fairchild
10531	06101	Dual "D" Master Slave Flip-Flop	Motorola
10576	06103	Hex "D" Master Slave Flip-Flop	Motorola
10535	06104	Dual J-K Master-Slave Flip-Flop	Motorola
10631	06102	Dual "D" Master Slave Flip-Flop	Motorola

GATES, AND/NAND

4011A	05001	Quad 2-Input NAND Gate	Motorola, National, RCA, SSS
4012A	05002	Dual 4-Input NAND Gate	Motorola, National, RCA, SSS
4023A	05003	Triple 3-Input NAND Gate	Motorola, National, RCA, SSS
4073B	17003	Triple 3-Input AND Gate	Motorola, RCA
4081B	17001	Quad-2-Input AND Gate	Motorola, RCA, SSS
4082B	17002	Dual 4-Input AND Gate	Motorola, RCA
5400	00104	Quad 2-Input NAND Gate	Fairchild, Motorola, National, Signetics, TI
5401	00107	Quad-2-Input NAND Gate, O/C	Motorola, National, TI
5403	00109	Quad 2-Input NAND Gate, O/C	Motorola, National, TI
5408	01601	Quad 2-Input AND Gate	Fairchild, Motorola, National
5409	01602	Quad 2-Input AND Gate, O/C	Fairchild, Motorola
5410	00103	Triple 3-Input NAND Gate	Fairchild, Motorola National, Signetics, TI
5412	00106	Triple 3-Input NAND Gate, O/C	TI
5420	00102	Dual 4-Input NAND Gate	Fairchild, Motorola, National,Signetics, TI
5426	00805	Quad 2-Input NAND Gate, O/C	Signetics
5430	00101	8-Input NAND Gate	Fairchild, Motorola, National, TI
54H00	02304	Quad 2-Input NAND Gate	Fairchild, Motorola, TI
54H01	02306	Quad 2-Input NAND Gate, O/C	Motorola, TI

GATES, AND/NAND (cont)

Device	M38510/	Description	Source
54H08	15501	Quad 2-Input AND Gate	Motorola
Special	15504	Quad 2-Input AND Gate	Motorola
54H10	02303	Triple 3-Input NAND Gate	Fairchild, Motorola, TI
54H11	15502	Triple 3-Input AND Gate	Motorola
54H20	02302	Dual 4-Input NAND Gate	Fairchild, Motorola, TI
54H21	15503	Dual 4-Input AND Gate	Motorola
54H22	02307	Dual 4-Input NAND Gate, O/C	Fairchild, Motorola
54H30	02301	8-Input NAND Gate	Fairchild, Motorola, TI
54LS00	30001	Quad 2-Input NAND Gate	Fairchild, Motorola, National, Signetics, TI
54LS03	30002	Quad 2-Input NAND Gate, O/C	Fairchild, Motorola, National, TI
54LS08	31004	Quad 2-Input AND Gate	Fairchild, Motorola, National, Raytheon, Signetics, TI
54LS10	30005	Triple 3-Input NAND Gate	Fairchild, Motorola, National, Signetics, TI
54LS11	31001	Triple 3-Input AND Gate	Fairchild, Motorola, National, Raytheon, TI
54LS12	30006	Triple 3-Input NAND Gate, O/C	Motorola, National, Signetics, TI
54LS15	31002	Triple 3-Input AND Gate, O/C	Motorola, National, TI
54LS20	30007	Dual 4-Input NAND Gate	Fairchild, Motorola, National, Signetics, TI
54LS21	31003	Dual 4-Input AND Gate	Fairchild, Motorola, National, Raytheon, TI
54LS22	30008	Dual 4-Input NAND Gate, O/C	Fairchild, Motorola, National, TI
54LS26	32102	Quad 2-Input NAND O/C to 15V	Motorola, TI
54LS30	30009	8-Input NAND Gate	Fairchild, Motorola, National, TI
54LS38	30203	Quad 2-Input NAND Gate, O/C	Motorola, National, TI
54L00	02004	Quad 2-Input NAND Gate	National
54L03	02006	Quad 2-Input NAND Gate, O/C	National
54L10	02003	Triple 3-Input NAND Gate	National
54L20	02002	Dual 4-Input NAND Gate	National
54L30	02001	8-Input NAND Gate	National
54S00	07001	Quad 2-Input NAND Gate	Fairchild,Signetics, TI
54S03	07002	Quad 2-Input NAND Gate, O/C	TI
54S08	08003	Quad 2-Input AND Gate	Fairchild, Signetics
54S09	08004	Quad 2-Input AND Gate, O/C	Fairchild
54S10	07005	Triple 3-Input NAND Gate	Fairchild, Signetics, TI
54S11	08001	Triple 3-Input AND Gate	Fairchild,Signetics
54S20	07006	Dual 4-Input NAND Gate	Fairchild, TI
54S22	07007	Dual 4-Input NAND Gate, O/C	TI
54S30	07008	8 Input NAND Gate	TI
54S133	07009	13-Input NAND Gate	Fairchild,Signetics
930	03001	Dual 4-Input NAND Gate, Expandable, DTL	Fairchild
935	03002	DTL Hex Inverter	Fairchild
940	03002	DTL Logic Gate	Fairchild
946	03004	Quad 2-Input NAND Gate, DTL	Fairchild
962	03005	Triple 3-Input NAND Gate, DTL	Fairchild
10504	06201	Quad 2-Input NAND Gate	Motorola
10597	06202	Hex AND Gate	Motorola

GATES, AND-OR/AND-OR-INVERT

4019A	05302	Quad AND-OR Select Gate	National, RCA, SSS

MICRO POWER SYSTEMS - HIGH RELIABILITY (HI-REL)

Micro Power Systems has established standard procedures for manufacturing, screening, qualification, and quality conformance, and is incorporating the requirements of both MIL-STD-883 and MIL-Q-9858. Devices meeting Class B screening requirements of MIL-STD-883 are available as standard catalog items. Requests for devices with other special requirements are invited.

MPS standard "/883B" parts designate devices which have been subjected to 100% screening in accordance with Method 5004 of MIL-STD-883, Class B.

Quality Conformance Testing (Groups A, B, C, D) in accordance with Method 5005 of MIL-STD-883 is available on special order.

Additionally, a complete line of monolithic dual transistors, both field effect and bipolar types, screened to the requirements of MIL-S-19500, MIL-STD-750, and MIL-STD-202 are also available as standard catalog items.

100% SCREENING PROCEDURE

SCREEN	MIL-STD-883 METHOD/COND.
1. Internal Visual	2010 Cond. B.
2. Stabilization Bake	1080 Cond. C (24 hrs. min.)
3. Temperature Cycling	1010 Cond. C
4. Constant Acceleration	2001 Cond. E; Y1 plane
5. Seal: (A) Fine	1014 Cond. A or B
(B) Gross	1014 Cond. C
6. Initial Electrical	MPS Specifications
7. Burn-In Test	1015 Cond. A or B 168 hrs. @ +125°C
8. Final Electrical 100% go-no-go	Subgroups A1, A2, A3, A7, Functional tests per Table 1
9. External Visual	2009 Sample Inspection
10. Lot Acceptance	Table 1, Group A Elect. Tests

NATIONAL SEMICONDUCTOR MIL-AERO

National Semiconductor offers six basic categories of Military/Aerospace Products. Our support of military standardization is demonstrated in the number of MIL-M-38510 qualified devices we offer. To provide devices of comparable quality and reliability where no MIL-M-38510 specifications exist, we offer a complete line of 883B/RETS™ devices, tested to the most compliant in-house screening program in the industry. The heart of this program is the RETS (Rel Electrical Test Specification) a fully documented and controlled electrical test specification. Our customers can tell exactly what we test. None of our competitors provide this level of visibility.

To meet the more extensive reliability needs of the space community, we offer MIL-M-38510 Class S devices and 883S/RETS™ devices, many of them radiation hardened. We have the products and the screening most major programs need. Let us show how we can meet your needs.

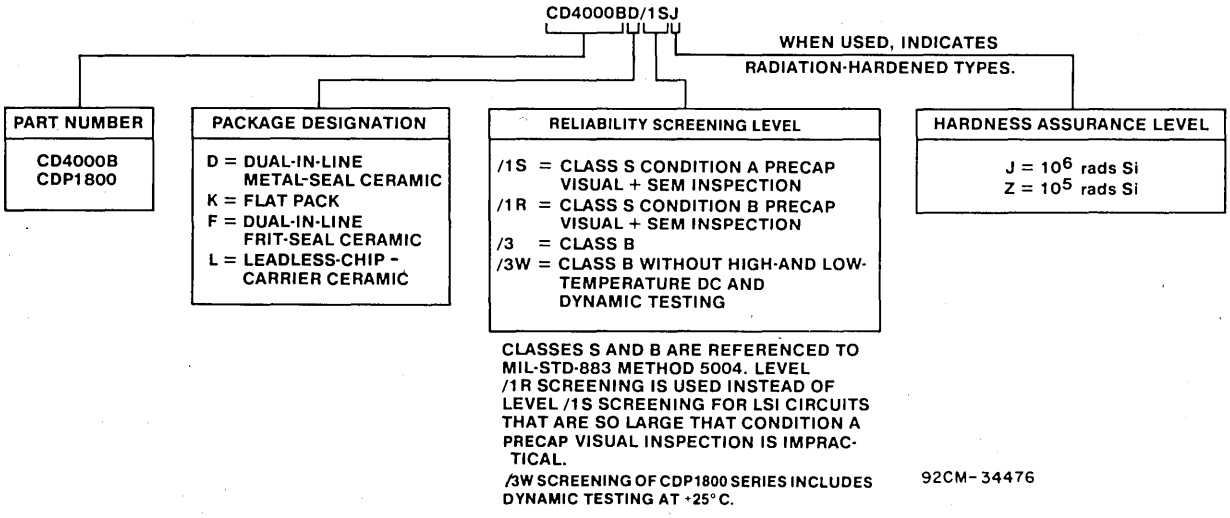
RCA MIL-STD-883 Slash-Series CMOS IC's

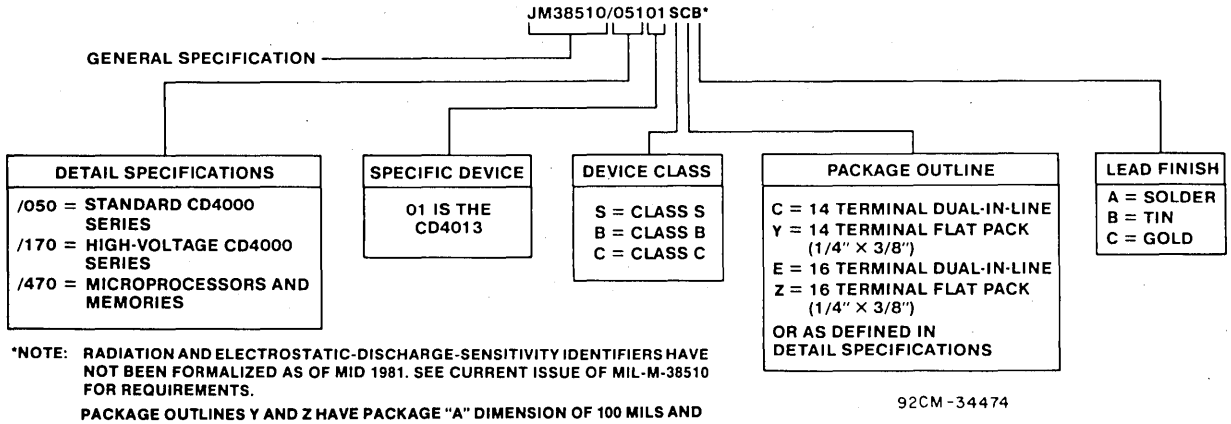
RCA high-reliability slash-series CMOS products include both CD4000-series digital logic types and CDP1800-series microprocessor and memory-system types. The CD4000-series parts are provided to three screening levels—/1S, /3, and /3W—that correspond to MIL-STD-883, Method 5004, Classes S and B requirements. The CDP1800-series parts are supplied to levels /3 and /3W. Equivalent aerospace level screening may be negotiated on a custom basis. RCA also supplies high-reliability chips. These chips are provided to two screening levels, /S (or /R for LSI types) and /M.

RCA CD4000-series level /1S packaged devices and /S chips are also available in radiation-hardened versions. These parts are processed to either 10^5 or 10^6 rads(Si) and are identified by addition of a " Z" or a "J" suffix letter, respectively, to the device type number (see nomenclature diagram below).

Guide to the reliability class, package, and radiation-hardness assurance level of RCA high-reliability (slash-series) CMOS integrated circuits processed to MIL-STD-883 Format.



Guide to the reliability class, package, lead finish, radiation-hardness assurance level, and electrostatic sensitivity of RCA high-reliability CMOS integrated circuits processed in accordance with MIL-M-38510.



*NOTE: RADIATION AND ELECTROSTATIC-DISCHARGE-SENSITIVITY IDENTIFIERS HAVE NOT BEEN FORMALIZED AS OF MID 1981. SEE CURRENT ISSUE OF MIL-M-38510 FOR REQUIREMENTS.

PACKAGE OUTLINES Y AND Z HAVE PACKAGE "A" DIMENSION OF 100 MILS AND ARE IN DETAILED SPECIFICATIONS.

RCA High-Reliability CMOS IC's

High-Voltage CD4000B-Series CMOS IC's

Type No.	Description	No. of Leads
CD4000B	Dual 3-input NOR gate plus inverter	14
CD4000UB	Dual 3-input NOR gate plus inverter	14
CD4001B	Quad 2-input NOR gate	14
CD4001UB	Quad 2-input NOR gate	14
CD4002B	Dual 4-input NOR gate	14
CD4002UB	Dual 4-input NOR gate	14
CD4006B	18-stage static shift register	14
CD4007UB	Dual complementary pair plus inverter	14
CD4008B	4-bit full adder with parallel carry-out	16
CD4009UB	Hex buffer/converter (inverting)	16
CD4010B	Hex buffer/converter (non-inverting)	16
CD4011B	Quad 2-input NAND gate	14
CD4011UB	Quad 2-input NAND gate	14
CD4012B	Dual 4-input NAND gate	14
CD4012UB	Dual 4-input NAND gate	14
CD4013B	Dual "D" flip-flop with set/reset capability	14
CD4014B	8-stage static shift register	16
CD4015B	Dual 4-stage static shift register	16
CD4016B	Quad bilateral switch	14
CD4017B	Decade counter/divider	16
CD4018B	Presettable divide-by "N" counter	16
CD4019B	Quad AND/OR select gate	16
CD4020B	14-stage Binary Ripple Counter	16
CD4021B	8-stage static shift register	16
CD4022B	Divide-by-8 counter/divider	16
CD4023B	Triple 3-input NAND gate	14
CD4023UB	Triple 3-input NAND gate	14
CD4024B	7-stage binary ripple counter	14
CD4025B	Triple 3-input NOR gate	14
CD4025UB	Triple 3-input NOR gate	14
CD4026B	Decade counter/divider	16
CD4027B	Dual "J-K" flip-flop with set/reset capability	16
CD4028B	BCD-to-decimal decoder	16
CD4029B	Presettable up/down counter	16
CD4030B	Quad exclusive-OR gate	14
CD4031B	64-stage static shift register	16
CD4033B	Decade counter/divider	16
CD4034B	8-stage static shift register	24
CD4035B	4-stage parallel-in/parallel-out shift register	16
CD4040B	12-stage binary ripple counter	16
CD4041UB	Quad true/complement buffer	14
CD4042B	Quad clocked "D" latch	16
CD4043B	Quad NOR R/S latch (3-state outputs)	16
CD4044B	Quad NAND R/S latch (3-state outputs)	16
CD4045B	21-stage timer	14
CD4046B	Micropower phase-locked loop	16
CD4047B	Monostable/astable multivibrator	14
CD4048B	Multifunctional expandable 8-input gate (3-state output)	16
CD4049UB	Hex buffer/converter (inverting)	16
CD4050B	Hex buffer/converter (non-inverting)	16
CD4051B	8-channel analog multiplexer/ demultiplexer	16
CD4052B	4-channel analog multiplexer/ demultiplexer	16
CD4053B	Triple 2-channel analog multiplexer/ demultiplexer	16
CD4060B	14-stage binary ripple counter/ divider and oscillator	16
CD4063B	4-bit magnitude comparator	16

Type No.	Description	No. of Leads
CD4066B	Quad bilateral switch	14
CD4067B	16-channel analog multiplexers/ demultiplexers	24
CD4068B	8-input NAND/AND gate	14
CD4069UB	Hex inverter	14
CD4070B	Quad exclusive-OR gate	14
CD4071B	Quad 2-input OR gate	14
CD4072B	Dual 4-input OR gate	14
CD4073B	Triple 3-input AND gate	14
CD4075B	Triple 3-input OR gate	14

RCA High-Reliability CMOS IC's

High-Voltage CD4000B-Series CMOS IC's (Cont'd)

Type No.	Description	No. of Leads
CD40106B	Hex Schmitt Trigger	14
CD40107B	Dual 2-input NAND buffer/driver	14
CD40108B	4 x 4 multiport register	24
CD40109B	Quad low-to-high voltage interface	16
CD40110B	Decade up/down counter/ decoder/latch/driver	16
CD40147B	10-line to 4-line BCD priority encoder	16
CD40160B	Decade counter with asynchronous clear	16
CD40161B	Binary counter with asynchronous clear	16
CD40162B	Decade counter with synchronous clear	16

Type No.	Description	No. of Leads
CD40163B	Binary counter with synchronous clear	16
CD40174B	Hex "D" flip-flop	16
CD40181B	4-bit arithmetic logic unit	24
CD40182B	Look-ahead-carry block	16
CD40192B	Presettable 4-bit BCD up/down counter	16
CD40193B	Presettable 4-bit binary up/down counter	16
CD40194B	4-bit bidirectional universal shift register	16
CD40208B	4 x 4 multiport register	24
CD40257B	Quad 2-line-to-1-line data selector	16

Note:
RCA also offers high-reliability versions of a number of the A-series (3 to 12V) counterparts (CD4000A through CD4050A and CD4060A) of the high-voltage B-series types listed above and of several A-series types for which there are no corresponding B-series types (i.e., CD4036A and CD4039A RAM's, CD4057A ALU, and CD4059A programmable divide-by-N counter).

CDP1800-series CMOS Microprocessor, Memories, and I/O's

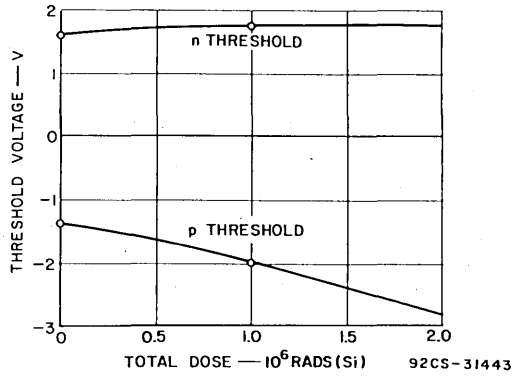
Type No.	Description	No. of Leads
CDP1802A	LSI Central-processing unit	40
CDP1821	1024 x 1 RAM	16
CDP1822	256 x 4 RAM	22
CDP1823	128 x 8 RAM	24
CDP1824	32 x 8 RAM	18
CDP1831	512 x 8 ROM (custom)	24
CDP1832	512 x 8 ROM (custom)	24
CDP1833	1024 x 8 ROM (custom)	24

Type No.	Description	No. of Leads
CDP1834	1024 x 8 ROM (custom)	24
CDP1852	Byte I/O	24
CDP1853	N-Bit Decoder	16
CDP1854A	UART	40
CDP1856	Bus Buffer (memory)	16
CDP1857	Bus Buffer (I/O)	16
CDP1858	Address Latch	16
CDP1859	Address Latch	16

Radiation-Resistant CD4000-Series CMOS IC's

RCA offers radiation-hardened CD4000-series CMOS integrated circuits capable of withstanding total ionizing radiation dosages of 10^5 rads(Si)—Z-suffix types—or 10^6 rads(Si)—J-suffix types. These radiation-hardened types are processed to either MIL-M-38510 Class S or MIL-STD-883 level /1S. In addition, these types are subjected to special process controls in which their radiation tolerance is monitored. Samples are exposed to specified total radiation dosages from a Cobalt 60 source, pre- and post-radiation measurements are made of threshold, threshold delta, leakage current, and go, no-go functional tests.

The radiation resistance to the specified levels is verified by exposure of two packaged devices per wafer for SSI, MSI-1, and MSI-2 types and a varied quantity of packaged devices per lot for LSI types, depending on their complexity.



Typical threshold-voltage variations of RCA MEGARAD CD4000-series CMOS integrated circuits as a function of total-dose gamma radiation.

Radiation-Resistant CDP1800-Series Microprocessor and Memory IC's

The CDP1800 series utilizes self-aligned silicongate technology on either bulk or sapphire substrates. In this technology the gate oxide is grown early in the wafer fabrication sequence. In order to achieve total dose hardness the subsequent processes must be done at relatively low temperatures. RCA's Solid State Technology Center has developed a hardening process for silcon gate and is refining that process for volume manufacture. At the present time, requirements for total dose hardness will be negotiated on a customer by customer basis.

The RCA radiation-hardening custom technology has made possible selected CDP1800-series microprocessor and memory integrated circuits with radiation tolerance levels that approach 10^5 rads(Si).

Transient Capability of CMOS/SOS Memories

Temporary Upset	7×10^9 rads(Si)/second
Permanent Upset	$> 1 \times 10^{11}$ rads(Si)/second
Latch-Up	Not possible
Survival	$> 1 \times 10^{11}$ rads(Si)/second

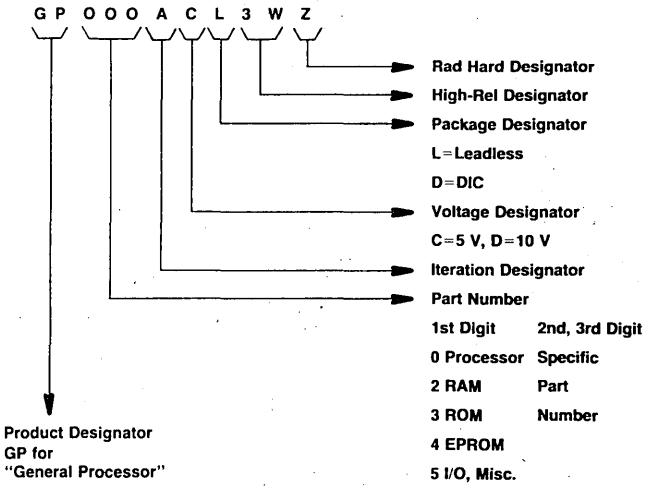
GP504ADL	Address select unit	48
GP505ADL	Register select unit	48
GP507ADL	Interrupt control unit	48

Nomenclature Guide



RCA MIL-STD-883 Slash-Series Linear IC's

The RCA CA3000 slash-series of high-reliability linear integrated circuits includes a broad range of types for use in satellites and other aerospace, military, and critical industrial applications in which maintenance is extremely difficult. These integrated circuits are processed and screened in accordance with MIL-STD-883, Method 5004 format.

The RCA CA3000 slash-series types are supplied to three screening levels (/1, /3, and /3W) that meet the electrical, mechanical, and environmental test methods and procedures established for microelectronics in MIL-STD-883.

RCA CA3000-series IC products listed below are commercial products that can be supplied to standard RCA screening levels or to specialized customer requirements on a custom basis.

CA3000-Series Linear IC's and MOS/FET's

Type No.	Description	No. of Leads
CA101A	Operational Amplifiers	8
CA723	Voltage Regulators	10
CA741	Operational Amplifiers	8

MILITARY PRODUCT GUIDE

MILITARY PRODUCTS/ PROCESS LEVELS

The Signetics MIL 38510/883 Program is organized to provide a broad selection of processing options, structured around the most commonly requested customer flows. The program is designed to provide our customers:

- Fully compliant 883B flows on all products.
- Standard processing flows to help minimize the need for custom specs.
- Cost savings realized by using standard processing flows in lieu of custom flows.
- Better delivery lead times by minimizing spec negotiation time, plus allow customers to buy product off-the-shelf or in various stages of production rather than waiting for devices started specifically to custom specs.

The following explains the different processing options available to you. Special device marking clearly distinguishes the type of screening performed. Refer to Tables 2, 3, 4 and 5.

Table 2 MILITARY SUMMARY

JAN QUALIFIED (JS and JB)

JAN Qualified product is designed to give you the optimum in quality and reliability. The JAN processing level is offered as the result of the government's product standardization programs, and is monitored by the Defense Electronic Supply Center (DESC), through the use of industry-wide procedures and specifications.

JAN Qualified products are manufactured, processed and tested in a government certified facility to Mil-M-38510, and appropriate device slash sheet specifications. Design documentation, lot sampling plans, electrical test data and qualification data for each specific part type has been approved by the Defense Electronic Supply Center (DESC) and products appear on the DESC Qualified Products List (QPL 38510).

Quality conformance inspection testing, per MIL-STD-883, Method 5005, is performed according to Mil-M-38510 as follows:

- Group A; each sublot.
- Group B; one sublot for each package type every week.
- Group C; one sublot for each microcircuit group every 13 weeks.
- Group D; one sublot for each package type every 26 weeks.

NOTE: This category of part conforms to Quality Level B-1 (π_Q = 3.0) of MIL-HDBK-2170.

In addition to the common specs used throughout the industry for processing and testing, JAN Qualified products also possess a requirement for a standard marking used throughout the IC industry.

By implementing this space-oriented government standardization program, Signetics complies with the trend of reducing the numerous similar Source Control Drawings (SCD's). This standardized trend results in a *single* complete and comprehensive specification, a *single* product flow, and a *single* administrative effort—for both the aerospace community and for Signetics. This effort will also result in a *single* lower price. Because the list of Signetics' qualified products will change periodically, you may wish to contact your nearest Signetics' Sales Office or refer to the *Products Qualified* under Military Specification from DESC for our current update.

JAN Class S orders will be quoted with unit price only (similar to present Class B programs). There will be no lot charges for SEM inspection, electrical testing, or Group B or D qualification. All additional charges are amortized in the unit price.

Package types currently qualified are:
1) Cerdip—ceramic dual-in-line
2) Cerpac—ceramic flat pack
3) Metal can packages

Government Source Inspection (GSI) is a required portion of the JAN 38510 Class S specification. No alterations to this specification may be instituted. Therefore, the only customer source inspection option is at pre-ship (verification only).

Additional program data options (such as wafer lot acceptance, attributes, Group B, D, and others) are available upon request for a nominal fee.

MIL-STD-883, LEVEL B

Processing to this option is ideal when no JAN slash sheets are released on devices required. Product is processed to MIL-STD-883 Method 5004, and is 100% electrically tested to Signetics data sheets.

Generic quality conformance inspection testing, per MIL-STD-883, Method 5005, is performed as follows:

- Group A; each sublot.
- Group B; one sublot for each package type every week.
- Group C; one sublot for each microcircuit group every 52 weeks (JAN data is applicable).
- Group D; one sublot for each package type every 52 weeks.

NOTE: This category of part conforms to Quality Level B (π_Q = 1.0) of MIL-HDBK-217D.

Copies of generic data, as defined above, are available to thos customers who require this data specifically on their purchase orders.

(Wafer Lot Accepted)

Balance to Support JAN Class "B" Production

The Signetics' JAN Class S inventory program will reduce delivery time and shipment delinquencies. As continuing orders from customers are processed to this specification, inventories will be established for products in the form of pre-qualified wafers and finished parts. As the program matures, this will allow immediate delivery of JAN Class S parts.

BIPOLAR LSI

	BASE		PACKAGE	DESCRIPTION
I/O Interface	8X371		I	8-Bit Bidirectional I/O Port for 8X300/8X305
	8X372		I	8-Bit Bidirectional I/O Port for 8X300/8X305
	8X374		I	8-Bit I/O Port with Parity for 8X305
	8X376		I	8-Bit Bidirectional I/O Port for 8X300/8X305
	8X382		I	4-In/4-Out I/O Port for 8X300/8X305
Memory (RAM)	8X350		F	256X8 Bit Bipolar RAM for 8X300/8X305
Microprocessors	3002		I	2-Bit Central Processing Element
	8X305		I, W	8-Bit Microcontroller
Semicustom Circuits	8A 1200		I	ISL Gate Array
	8A 1260		I	ISL Gate Array
	8A 1542		I	ISL Gate Array
	8A 1664		I, G, W	ISL Gate Array
	8A 1864		I, G, W	ISL Gate Array
	8A 2176		I, G, W	ISL Gate Array
Sequencers	3001		I	Microprogram Control Unit
Special Purpose Circuits	8X310		I	Interrupt Control Coprocessor for 8X305
	8X360		I	Memory Address Director for 8X305
	8X60		F	FIFO RAM Controller
Development Hardware and Kits			8X300KT1	8X305 Evaluation and Prototyping Kit
			EZ-PRO	Development System for 8X300/8X305 available from American Automation
			Programmer (I/O Port)	Available from Data I/O or American Automation
Development Software			8X300AS1	8X300 Cross-assembler (MCCAP) FORTRAN Source Program

SYM2114A
Military 1024 x 4 Static Random Access Memory
Extended Temperature Range (-55° C to +125° C)

Features

- Totally TTL Compatible:
  All Inputs, Outputs, and Power Supply
- Common Data I/O
- 400 mV Noise Immunity
- High Density 18 Pin Package
- 150ns Maximum Access
- Low Operating Power
  - 385 mW Max.
- No Clocks or Strobes Required
- Identical Cycle and Access Times
- Single +5V Supply

Description

The SYM2114A is a 4096-Bit static Random Access Memory organized 1024 words by 4-bits and is fabricated using Synertek's N-channel Silicon-Gate MOS technology. It is designed using fully DC stable (static) circuitry in both the memory array and the decoding and therefore requires no clock or refreshing to operate. Address setup times are not required and the data is read out nondestructively with the same polarity as the input data. Common Input/Output pins are provided to simplify design of the bus oriented systems, and can drive 1 TTL load.

The SYM2114A is designed for memory applications where high performance, low cost, large bit storage, and simple interfacing are important design objectives. It is totally TTL compatible in all respects: inputs, outputs, and the single +5V supply. A separate Chip Select ($\overline{CS}$) input allows easy selection of an individual device when outputs are or-tied.

The SYM2114A is packaged in an 18-pin DIP for the highest possible density and is fabricated with N-channel, Ion Implanted, Silicon-Gate technology — a technology providing excellent performance characteristics as well as improved protection against contamination.

SYM2147
Military 4096 x 1 Static Random Access Memory
Extended Temperature Range (-55° C to +125° C)

Features

- 55 ns Maximum Access
- No Clocks or Strobes Required
- Automatic $\overline{CE}$ Power Down
- Identical Cycle and Access Times
- Single +5V Supply (±10%)
- Totally TTL Compatible
  All Inputs and Outputs
- Separate Data Input and Output
- High Density 18-Pin Package
- Three-State Output

Description

The Synertek SYM2147 is a 4096-Bit Static Random Access Memory organized 4096 words by 1-bit and is fabricated using Synertek's new N-Channel Silicon-Gate HMOS technology. It is designed using fully static circuitry, therefore requiring no clock or refreshing to operate. Address set-up times are not required and the data is read out non-destructively with the same polarity as the input data. Separate data input and output pins provide maximum design flexibility. The three-state output facilitates memory expansion by allowing the outputs to be OR-tied to other devices.

The SYM2147 offers an automatic power down feature. Power down is controlled by the Chip Enable input. When Chip Enable ($\overline{CE}$) goes high, thus de-selecting the SYM2147, the device will automatically power down and remain in a standby power mode as long as $\overline{CE}$ remains high. This unique feature provides system level power savings as much as 80%.

The SYM2147 is packaged in an 18-pin DIP for the highest possible density. The device is fully TTL compatible and has a single +5V power supply.

Synertek.

SYM2148H/SYM2149H

Military 1024 x 4 Static Random Access Memory

Extended Temperature Range (-55° C to +125° C)

Features

- 55 ns Maximum Access
- No Clocks or Strobes Required
- Automatic $\overline{CE}$ Power Down (SYM2148H)
- Fast Chip Select Access Time: 25 ns Max. (SYM2149H)
- Identical Cycle and Access Times
- Single +5V Supply (±10%)
- Industry Standard 2114 Pinout
- Totally TTL Compatible All Inputs and Outputs
- Common Data Input and Output
- High Density 18-Pin Package
- Three-State Output

Description

The Synertek SYM2148H/SYM2149H are 4096-Bit Static Random Access Memories organized 1024 words by 4 bits and are fabricated using Synertek's new N-Channel Silicon Gate technology. They are designed using fully static circuitry, therefore requiring no clock or refreshing to operate. Address set-up times are not required and the data is read out non-destructively with the same polarity as the input data. Common data input and output pins provide maximum design flexibility. The three-state output facilitates memory expansion by allowing the outputs to be OR-tied to other devices.

The SYM2148H offers an automatic power down feature. Power down is controlled by the Chip Enable input. When Chip Enable ($\overline{CE}$) goes high, thus de-selecting the SYM2148H, the device will automatically power down and remain in a standby power mode as long as $\overline{CE}$ remains high. This unique feature provides system level power savings as much as 85%.

The SYM2149H offers a chip select access that is faster than its address access. In a typical application, the address access begins as soon as the address is valid. At this time, the high order addresses are decoded and the desired memory is then selected. With the faster chip select access, this decode time will not add to the overall access time thus significantly improving system performance.

The SYM2148H/SYM2149H is packaged in an 18-pin DIP for the highest possible density. The device is fully TTL compatible and has a single +5V power supply.

Pin Configuration

SYM2148H/SYM2149H

Synertek.

SYM2128/SYM2129

Military 2048 x 8 Static Random Access Memory

Extended Temperature Range (-55° C to +125° C)

Features

- 150 nsec Maximum Access Time
- Fully Static Operation: No Clocks or Strobes Required
- Fast Chip Select Access Time: 60 ns Max. (SYM2129)
- Automatic $\overline{CE}$ Power Down (SYM2128)
- Identical Cycle and Access Times
- Single +5V Supply (±10%)
- Pin Compatible with 2716 16K EPROM
- Totally TTL Compatible: All Inputs and Outputs
- Common Data Input and Output
- Three-State Output
- JEDEC Approved Pinout

Description

The Synertek SYM2128/SYM2129 are 16,384 bit static Random Access Memories organized 2048 words by eight bits and are fabricated using Synertek's new scaled n-channel silicon gate technology. They are designed using fully static circuitry, therefore requiring no clock or refreshing to operate. The common data input and three-state output pins optimize compatibility with systems utilizing a bidirectional data bus.

The SYM2128 offers an automatic power down feature under the control of the chip enable ($\overline{CE}$) input. When $\overline{CE}$ goes high, thus deselecting the chip, the device will automatically power down and remain in a standby power mode as long as $\overline{CE}$ remains high. This feature provides significant system level power savings.

The SYM2129 offers a chip select access that is faster than its address access. In a typical application, the address access begins as soon as the address is valid. At this time, the high order addresses are decoded and the desired memory is then selected. With the faster chip select access, this decode time will not add to the overall access time thus significantly improving system performance.

The SYM2128/SYM2129 are configured in the JEDEC approved pinout for 24 pin byte organized memories and are pin compatible with 16K ROMs, EPROMs and EEPROMs. This offers the user the flexibility of being able to switch between RAM, ROM, EPROM, or EEPROM as his needs dictate with a minimum of board changes.

SYM2167

Military 16,384 x 1 Static Random Access Memory

Extended Temperature Range (-55°C to +125°C)

ADVANCED INFORMATION
OCTOBER 1982

Features

- 70 ns Maximum Access
- No Clocks or Strobes Required
- Automatic $\overline{CE}$ Power Down
- Identical Cycle and Access Times
- Single +5V Supply
- Available in Ceramic (C), Cerdip (D), Flat Pack (F) and Leadless Chip Carrier (K)
- Totally TTL Compatible All Inputs and Outputs
- Separate Data Input and Output
- High Density 20 Pin Package
- Three-State Output

Description

The Synertek SY2167 is a 16,384-Bit Static Random Access Memory organized 16,384 words by 1-bit and is fabricated using Synertek's new N-Channel Double Polysilicon Gate HMOS technology. It is designed using fully static circuitry, therefore requiring no clock or refreshing to operate. Address set-up times are not required and the data is read out non-destructively with the same polarity as the input data. Separate data input and output pins provide maximum design flexibility. The three-state output facilitates memory expansion by allowing the outputs to be OR-tied to other devices.

The SY2167 offers an automatic power down feature. Power down is controlled by the Chip Enable input. When Chip Enable ($\overline{CE}$) goes high, thus de-selecting the SY2167, the device will automatically power down and remain in a standby power mode as long as $\overline{CE}$ remains high. This unique feature provides system level power savings as much as 80%.

The SY2167 is packaged in a 20-pin DIP for the highest possible density. The device is fully TTL compatible and has a single +5V power supply.

Synertek

SYM2168/SYM2169

Military 4096 x 4 Static Random Access Memory

Extended Temperature Range (-55°C to +125°C)

Advanced Information

October 1982

Features

- 70 ns Maximum Access Time
- No Clocks or Strobes Required
- Fast Chip Select Access Time: 50 ns Max. (SY2169)
- Automatic $\overline{CE}$ Power Down (SY2168)
- Identical Cycle and Access Times
- Available in Ceramic (C), Cerdip (D), Flatpack (F) and Leadless Chip Carrier (K)
- Single +5V Supply (±10%)
- JEDEC Standard Pinout
- Totally TTL Compatible All Inputs and Outputs
- Common Data Input and Output
- High Density 20-Pin Package
- Three-State Output

Description

The Synertek SY2168/SY2169 is a 16,384-Bit Static Random Access Memories organized 4096 words by 4 bits and are fabricated using Synertek's scaled n-channel double poly silicon gate technology. They are designed using fully static circuitry, therefore requiring no clock or refreshing to operate. Address set-up times are not required and the data is read out non-destructively with the same polarity as the input data. Common data input and output pins provide maximum design flexibility. The three-state output facilitates memory expansion by allowing the outputs to be OR-tied to other devices.

The SY2168 offers an automatic power down feature. Power down is controlled by the Chip Enable input. When Chip Enable ($\overline{CE}$) goes high, thus de-selecting the SY2168, the device will automatically power down and remain in a standby power mode as long as $\overline{CE}$ remains high. This unique feature provides system level power savings as much as 85%.

The SY2169 offers a chip select access that is faster than its address access. In a typical application, the address access begins as soon as the address is valid. At this time, the high order addresses are decoded and the desired memory is then selected. With the faster chip select access, this decode time will not add to the overall access time thus significantly improving system performance.

Both parts are packaged in a 20-pin DIP for the highest possible density. Both devices are fully TTL compatible and have a single +5V power supply.

SYM2316B

2048 x 8 Static Read Only Memory

Features

- Access Time 200/300/450 ns (max)
- 2048 x 8 Bit Organization
- Single +5 Volt Supply
- Totally Static Operation
- JEDEC Approved Pinout
- Completely TTL Compatible
- Three-State Outputs for Wire-OR Expansion
- Three Programmable Chip Selects
- Pin Compatible with 2716 EPROM
- Replacement for Two 2708s

Description

The SY2316B high performance Read Only Memories are organized 2048 words by 8 bits with access times from 200 to 450 ns. The ROMs are designed to be compatible with all microprocessor and similar applications where high performance, large bit storage and simple interfacing are important design considerations. This device offers TTL input and output levels with a minimum of 0.4 Volt noise immunity in conjunction with a +5 Volt power supply.

The SY2316B operates totally asynchronously. No clock input is required. The three programmable Chip Select inputs allow eight 16K ROMs to be OR-tied without external decoding. The device offers three-state output buffers for memory expansion.

Designed to replace the 2716 EPROM, the SY2316B can eliminate the need to redesign printed circuit boards for volume mask programmed ROMs after prototyping with EPROMs.

SYM2332/SYM2333

Military 4096 x 8 Static Random Access Memory

Extended Temperature Range (-55° C to +125° C)

Features

- SYM2333-273 EPROM Pin Compatible
- 4092 x 8 Bit Organizations
- Single +5 Volt Supply (±10%)
- Access Time — 450 ns (max.)
- Totally Static Operation
- Completely TTL Compatible
- SYM2332-2532 EPROM Pin Compatible
- Three-State Outputs for Wire-OR Expansion
- Two Programmable Chip Selects
- EPROMS Accepted as Program Data Inputs

Description

The SYM2332 and SYM2333 high performance read only memories are organized 4096 words by 8 bits with access times of less than 450 ns. They are designed to be compatible with all microprocessor and similar applications where high performance, large bit storage and simple interfacing are important design considerations. These devices offer TTL input and output levels with a minimum of 0.4 Volt noise immunity in conjunction with a +5 Volt power supply.

The SYM2332 and SYM2333 operate totally asynchronously. No clock input is required. The two programmable Chip Select inputs allow four 32K ROMs to be OR-tied without external decoding. Both devices offer three-state output buffers for memory expansion.

Designed to replace 32K EPROMs, the SYM2332 and SYM2333 can eliminate the need to redesign printed circuit boards for volume mask programmed ROMs after prototyping with EPROMs.

© IC MASTER 1983

Synertek.

SYM2364/SYM2364A
Military 8192 x 8 Static Random Access Memory
Extended Temperature Range (-55°C to +125°C)

Features

- 2564 EPROM Pin Compatible
- 8192 x 8 Bit Organization
- Single +5 Volt Supply
- Access Time — 450 ns (max)
- Totally Static Operation
- Completely TTL Compatible
- 24 Pin JEDEC Approved Pinout
- SYM2364A — Automatic Power Down ($\overline{CE}$)
- SYM2364 — Non Power Down Version
  — Programmable Chip Select
- Three State Outputs for Wire-OR Expansion
- EPROMs Accepted as Program Data Input

Description

The SYM2364 and SYM2364A high performance Read Only Memories are organized 8192 words by 8 bits with an access time of 450 ns. The ROMs are designed to be compatible with all microprocessor and similar applications where high performance, large bit storage and simple interfacing are important design considerations. Both ROMs conform to the JEDEC approved pinout for 24 pin 64K ROMs.

The SYM2364 offers the simplest operation (no power down.) Its programmable chip select allows two 64K ROMs to be OR-tied without external decoding.

The SYM2364A offers an automatic power down feature. Power down is controlled by the Chip Enable ($\overline{CE}$) input. When $\overline{CE}$ goes high, the device will automatically power down and remain in a low power standby mode as long as $\overline{CE}$ remains high. This unique feature provides system level power savings as much as 90%.

Both the SYM2364 and SYM2364A are pin compatible with the 2564 EPROM thus eliminating the need to redesign printed circuit boards for volume mask programmed ROMs after prototyping with EPROMs.

SYM2365/SYM2365A
Military 8192 x 8 Static Random Access Memory
Extended Temperature Range (-55°C to +125°C)

Features

- 2764 EPROM Pin Compatible
- 8192 x 8 Bit Organization
- Single +5 Volt Supply
- Access Time — 450 ns (max)
- Totally Static Operation
- Completely TTL Compatible
- 28 Pin JEDEC Approved Pinout
- SYM2365A — Automatic Power Down ($\overline{CE}$)
  — Output Enable Function ($\overline{OE}$)
  — Two Programmable Chip Selects
- SYM2365 — Non Power Down Version
  — Four Programmable Chip Selects
- Three State Outputs for Wire-OR Expansion
- EPROMs Accepted as Program Data Input

Description

The SYM2365 and SYM2365A high performance Read Only Memories are organized 8192 words by 8 bits with an access time of 450 ns. The ROMs are designed to be compatible with all microprocessor and similar applications where high performance, large bit storage and simple interfacing are important design considerations. Both ROMs conform to the JEDEC approved pinout for 28 pin 64K ROMs.

The SYM2365 offers the simplest operation (no power down.) Its four programmable chip selects allow up to sixteen 64K ROMs to be OR-tied without external decoding.

The SYM2365A offers an automatic power down feature. Power down is controlled by the Chip Enable ($\overline{CE}$) input. When $\overline{CE}$ goes high, the device will automatically power down and remain in a low power standby mode as long as $\overline{CE}$ remains high. This unique feature provides system level power savings as much as 90%. An additional feature of the SYM2365A is the Output Enable ($\overline{OE}$) function. This eliminates bus contention in multiple bus microprocessor systems. The two programmable chip selects allow up to four 64K ROMs to be OR-tied without external decoding.

Both the SYM2365 and SYM2365A are pin compatible with the 2764 EPROM thus eliminating the need to redesign printed circuit boards for volume mask programmed ROMs after prototyping with EPROMs.

SYM3316/SYM3316A

2048 x 8 High Speed Read Only Memory

Extended Temperature Range (-55° C to +125° C)

Features

- Access Time – 100ns (max.)
- Single +5 Volt Supply (± 10%)
- Contact Programming
- Four Week Prototype Turnaround
- Completely TTL Compatible
- Totally Static Operation
- SYM3316A – Automatic Power Down ($\overline{CE}$)
- Pin Compatible with 16K Bipolar PROMs — Replaces 3636 or 82S191
- Three-State Outputs for Wire-OR Expansion
- Three Programmable Chip Selects (two on SYM3316A)
- 16K Bipolar PROMs Accepted as Program Data Inputs

Description

The SYM3316 and SYM3316A are high speed 16,384 bit static mask programmable Read Only Memories organized 2048 words by 8 bits. Designed to be pin compatible with 16K bipolar PROMs, they eliminate the need to redesign printed circuit boards for volume production after prototyping with PROMs.

The SYM3316A offers an automatic power down feature. Power down is controlled by the Chip Enable ($\overline{CE}$) input. When $\overline{CE}$ goes high, the device will automatically power down and remain in a standby power mode as long as $\overline{CE}$ remains high. This unique feature provides system level power savings of as much as 80%. The two programmable chip selects (CS) allow as many as four ROMs to be OR-tied without external decoding.

The SYM3316 offers somewhat simpler operation than the SYM3316A. It's three programmable chip selects allow up to eight ROMs to be OR-tied without external decoding.

Both devices are fabricated using Synertek's scaled high performance N-channel MOS technology. This, combined with innovative design techniques, provides the high performance and ease-of-use features associated with static memories.

Pin Configurations

TEXAS INSTRUMENTS MILITARY PRODUCTS

Texas Instruments Military program offers high reliability integrated circuits covering a complete product spectrum. The program is designed to meet and support Military processing requirements. Processing to JM-38510 (JANB) and MIL-Standard-883 Class B assures the user of quality products and reliable performance.

54ALS11	Triple 3-Input AND Gates
54ALS12	Triple 3-Input NAND Gates with O/C Output
54ALS15	Triple 3-Input AND Gates With O/C Output
54ALS20A	Dual 4-Input NAND Gates
54ALS21	Dual 4-Input AND Gates
54ALS22A	Dual 4-Input NAND Gates With O/C Output
54ALS27	Triple 3-Input NOR Gates
54ALS28	Triple 3-Input NOR Buffers
54ALS30	8-Input NAND Gates

54ALS32	Quadruple 2-Input OR Gates
54ALS33	Quadruple 2-Input NOR Buffers With O/C Output
54ALS37	Quadruple 2-Input NAND Buffers
54ALS38	Quadruple 2-Input NAND Buffers with O/C Output
54ALS74	Dual D-Type Flip-Flop With PRESET And CLEAR
54ALS109	Dual J-K Flip-Flop (Positive Edge Triggered)
54ALS112A	Dual J-K Flip-Flop (Negative Edge Triggered)
54ALS114A	Dual J-K Flip-Flop
54ALS240	Octal Buffers/Line Drivers/Line Receivers
54ALS241	Octal Buffers/Line Drivers/Line Receivers
54ALS244	Octal Buffers/Line Drivers/Line Receivers
54ALS245	Octal Bus Tranceivers
54ALS573	Octal D-Type Transparent Latches
54ALS574	Octal D-Type Edge-Triggered Flip-Flops
54ALS576	Octal D-Type Flip-Flop With Inverted Outputs
54ALS580	Octal D-Type Latches With Inverted Outputs
54ALS874	Dual 4-Bit D-Type Flip-Flop

LOGIC NOMENCLATURE

EXAMPLE: SNJ 54LS00 FH

1. PREFIX
Must contain three or four letters

SNJ—MIL-STD-883B, JEDEC Standard 101
JANB—JM 38510/JANB Qualified*

2. CIRCUIT DESIGNATOR
Must contain four to nine digits

54—Standard TTL Circuits
54H—High Speed TTL
54L—Low-Power TTL
54LS—Low-Power Schottky TTL
54S—Schottky TTL
54ALS—Advanced Low-power Schottky TTL
54AS—Advanced Schottky TTL

3. PACKAGE TYPE
Must contain one or two letters

J, W, FH, FK

LINEAR/INTERFACE NOMENCLATURE/BIPOLAR MEMORY SELECTION GUIDE

LINEAR/INTERFACE NOMENCLATURE

The nomenclature used in linear IC designation is both varied and informative. Part numbers indicate the following:

- Product type
- Original manufacturer
- Temperature range
- Package type
- Screening and lot conformance

EXAMPLE TL 022M JG /883B

1. PREFIX

Must contain two, three or four letters

TL	TI Linear Control Products
SNJ	MIL-STD-883 Method 5004 Level B
JANB	JM 38510 JANB qualified*

Standard prefixes per original vendor

DS,LF or LM	National	MC	Motorola
NE, SE	Signetics	SG	Silicon General
RC,RM	Raytheon	μA	Fairchild

2. CIRCUIT DESIGNATOR INCLUDING TEMPERATURE RANGE

Must contain three to seven characters
(From individual data sheets)
Examples 022M 1524
101A 55450B
107 78M05M

3. MIL STD 883B METHOD 5004, CLASS B

Not used with part numbers having an SN prefix

4. PACKAGE

Must contain one or two letters
J, JG, U, W, WC, RA, FH, FK
(From pin connection diagram on individual data sheet)

*Where devices are qualified under military specification MIL-M-38510

MOS MEMORY CROSS REFERENCE GUIDE

SMJ XXXX-XXJX	TI
MKB XXXX	MOSTEK
M XXXX B	INTEL
MCM XXXX BXBA	MOTOROLA

MM XXXX XX/883	NATIONAL
XXXX DMB	AMD
XXXX DMQB	FAIRCHILD

MOS MEMORY NOMENCLATURE

EXAMPLE: SMJ 2564 −45 JD M

1. PREFIX
Must contain three letters
SMJ—MIL STD-883B, JEDEC Standard 101

2. CIRCUIT DESIGNATOR
Must contain four or five characters
All standard types have four digits
All low-power versions have five characters
Examples: Standard 32K EPROM-2532
Low-power 32K EPROM-25L32

3. ACCESS TIME
Device types are available with various speeds

4. TEMPERATURE RANGE
Must contain one letter only
M— −55 to 125°C E— −40 to 85°C
S— −55 to 100°C L— 0 to 70°C

5. PACKAGE TYPE
Must contain one or two letters J, JD, FE, FG

MEMORY MODULE

The high speed, 256K-bit, Dynamic Random Access Memory module is fabricated using state-of-the-art SMOS N-channel technology for very high performance combined with low cost and improved reliability. This new technology permits operation from a single +5 volt power supply which reduces system power supply and decoupling requirements making board layout easier.

The module features four 64K DRAMs in Leadless Ceramic Chip Carriers mounted on top of a standard 600-mil, 28 pin dual-in-line substrate package.

MEMORY MODULE NOMENCLATURE

EXAMPLE: SMJ 4 4 4164 −15 S

1. PREFIX
Must contain three letters
SMJ—MIL-STD-883

2. WORD WIDTH
Must contain one digit only
1, 2, 4, 8

3. DEVICES PER UNIT
Must contain one digit only
2, 4, 8

4. TEMPERATURE RANGE
Must contain one letter only
S— −55 to 100°C E— −40 to 85°C
L— 0 to 70°C

5. ACCESS TIME
Device types are available with various speeds

6. CIRCUIT DESIGNATOR
Must contain at least four digits

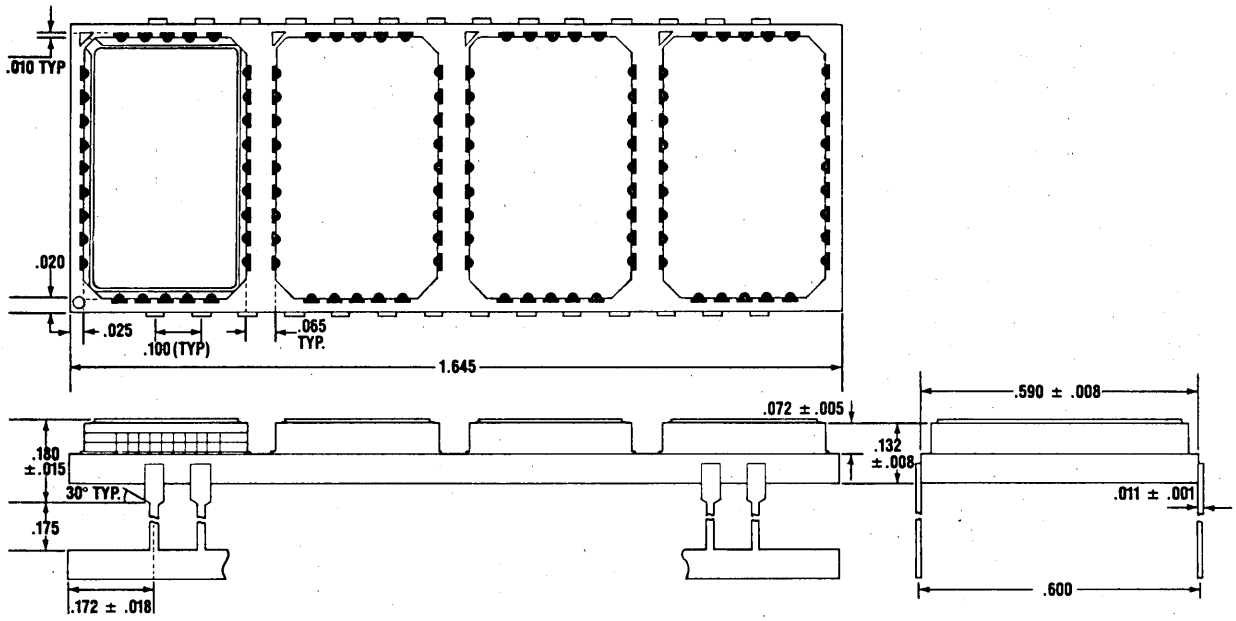
MEMORY MODEL DIMENSIONAL OUTLINE



SBP 9989 MICROPROCESSOR

PRODUCT FEATURES

- 4.4-MHz clock rate, single phase, 50% duty cycle
- Designed-in support for advanced multiprocessor system architecture
- 16 bit data and address bus
- Serial I/O via Communications Register Unit (CRU)
- 16 prioritized hardware interrupts/16 software interrupts
- 9900 Family instruction set including signed multiply (MPY) and signed divide (DIV).
- Direct access to 128K bytes of memory (via new output in MPEN)
- Operation over full MIL-TEMP range (– 55°C to 125°C)
- Radiation tolerance characteristics of I^2L Technology

9989 MICROPROCESSOR NOMENCLATURE

EXAMPLE: SBP 9989 N J

1. PREFIX

Must contain three or four letters
SBP—Military Designator
JAN B—JM38510/JANB Qualified†

2. CIRCUIT DESIGNATOR

Must contain four digits
9989—advanced 4.4MHz 16 bit processor

3. TEMPERATURE RANGE

Must contain one letter only
N— – 55°C to 125°C

4. PACKAGE TYPE

Must contain two letters—J, FK

†Future product

PACKAGES AVAILABLE

PACKAGE TYPE	DESCRIPTION
J, JG	Ceramic Dip
JD	Side Braze Ceramic Dip
W, WC	Ceramic Flat-Pack
U	Ceramic Flat-Pack
FH	Single Layer Square Chip Carrier (JEDEC Pin Out)
FK	Three Layer Square Chip Carrier (JEDEC Pin Out)
FE	Three Layer Rectangular Chip Carrier (28- and 32-Pad)
FG	Three Layer Rectangular Chip Carrier (18- and 20-Pad)

INTRODUCTION TO DIGITAL

The Master Selection Guide provides sufficient information for making initial product selections. All devices that appear in this section, both in the initial selection guide and the data pages, are included in all other indexes.

The first two pages of the digital section present performance comparisons of the major digital families. These are followed by lists of the devices in each family arranged into functional groups (arithmetic, buffers/inverters, etc.). The initial selection lists are followed by the device data pages provided by the manufacturers. Page number references to these data pages are given with the initial selection listings.

Some digital circuits—calculator, watch chips, and electronic organ circuits—not included in this section are covered in detail in the Linear-Consumer section. Digital circuits not included in one of the major logic families are listed in the heading Digital-Other Devices.

This section is not complicated by reference to package styles; the package style suffixes are usually deleted. For more information on each companies' suffixes, see the Part Number Guide. Throughout the Master Selection Guide, each full military temperature range (−55°C to 125°C) device is indicated by a dagger (†) before the manufacturer's name. Manufacturers' names are normally spelled out; however, a few are abbreviated and the abbreviations are explained on page 772.

EINFÜHRUNG DIGITAL-SCHALTUNGEN

Der Master Selection Guide für Digitalschaltungen enthält alle Informationen, die Sie für die Erstauswahl Ihres Produkts benötigen. Die Bauteile, die in diesem Abschnitt erscheinen, sowohl im Selection Guide als auch auf den Datenblättern, sind in allen Master Indexes enthalten.

Die ersten beiden Seiten des Digital-Teils beinhalten Leistungs-vergleiche der wichtigsten Digitalfamilien. Daran anschließend finden Sie ein Verzeichnis der Bauteile jeder Familie nach Funktionen (arithmetische Funktionen, Buffers/Inverters usw.). Diesen Listen folgen die Datenblätter der Hersteller. Der Master Selection Guide verweist jeweils auf das entsprechende Datenblatt.

Einige Digital-Schaltungen (Rechner, Uhren-Chips und elektronische Orgel-Schaltungen), die in diesem Teil nicht enthalten sind, werden ausführlich im Abschnitt Linear-Consumer behandelt. Digital-Schaltungen, die nicht in einer der größeren Logik-Familien enthalten sind, finden sich unter der Rubrik "Digital-Sonstige Bauteile" (Digital — Other Devices).

Dieser Abschnitt wird nicht durch Hinweise auf Gehäuseformen Kompliziert. Die entsprechenden Suffix wurden meistens weggelassen. Weitere Information über die Suffixe jedes Herstellers erhalten Sie über das Numerische Typenverzeichnis. Im ganzen Master Selection Guide sind alle Bauteile mit militärischem Temperaturebereich (—55° bis 125°C) durch ein Kreuz (†) vor dem Namen des Herstellers gekennzeichnet. Die Namen der Hersteller sind normalerweise ausgerschrieben; einige jedoch sind abgekurst. Die Abkürzungen werden auf S. 772 erklärt.

© IC MASTER 1983

INTRODUCTION AU SYSTEME DIGITAL

Le Guide Général de Sélection fournit suffisamment de renseignements pour permettre des selections initiales de produits. Tous les appareils énumérés dans cette Section, à la fois dans le Premier Guide de Sélection et le feuilles de données, apparaissent également dans tous les autres index.

Les deux premières pages de la Section "Digital" présentent des comparaisons de performance entre les principales familles de système digital. Suivent ensuite des listes d'appareils de chaque famille, classés par groupes fonctionnels (arithmétique, registres, invertisseurs, etc.). Les listes de première sélection sont suivies par des feuilles de données par appareil, fournies par les fabricants. Les références de numéros de pages de ces données sont communiquées dans les listes de première sélection.

Quelques circuits digitaux — calculatrices, circuits de montre, et circuits électroniques primaires — no signalés dans cette Section, sont étudiés en detail dans la Section "Linéaire". Les circuits digitaux non inclus dans l'une des familles principales de Legique, sont énumérés dans la rubrique "Autres Systemes Digitaux" (Digital-Other Devices).

Cette Section ne fait pas apparaître les types de boitier. Les suffixes indiquant les types de boitier sont généralement omis. Pour obtenir des renseignements supplémentaires sur les suffixes utilsés par chaque société, veuillez vous reporter au Guide des Numéros de Pièces. Dans tout le Guide Général de Sélection chaque appareil possédant la variante complète de température imposée par l'Armée (—55°C à 125°C) est indiqué par le symbole (†) inscrit devant le nom du fabricant. Les noms des fabricants sont généralement écrits en entier, il arrive cependant que certains soient abrégés. Voir page 772 pour obtenir la signification de ces abréviations.

© IC MASTER 1983

INTRODUCCIÓN A DIGITAL

La Guía Maestra de Selección provee suficiente información para hacer selecciones iniciales de producto. Todas las componentes que aparecen en esta sección, ya sea en la guía de selección inicial o en las páginas de datos, están incluidas en todos los otros índices.

Las primeras dos páginas de la sección digital presenta comparación de funcionamiento entre las familias digitales mayores. Estas están sequidas por listas de las componentes correspondiente a cada familia y organizadas en grupos funcionales (aritmético, separadores, invertidores, etc). Las listas de selección inicial están sequidas por las páginas de datos, de las componentes proveídas por los fabricantes. Referencias del número de la página a estas páginas de datos están dadas con las listas de selección incial.

Algunos circuitos digitales — calculadoras, circuitos integrados de relojes, y circuitos de órganos eléctricos — no incluídas en esta sección son detalladas en la sección de Consumidor-Lineal. Los circuitos digitales no incluídos entre las familias lógicas mayores aparecen bajo el título Digital-Otras Componentes.

Esta sección no es complicada por referencias al estilo constructivo; los sufijos que denotan estilo constructivo han sido generalmente omitidos. Para información adicional sobre sufijos de las compañías, refiérase a la Guía de Número de Pieza. A lo largo de la Guía de Selección Maestra, cada intérvalo completo de temperatura para uso militar (—55° a 125°C) de la componente aparece indicada por el signo fabricantes no son generalmente deletreados; sin embargo, algunos aparecen abreviados y las abreviaturas son explicadas en la página 772.

ディジタルへの案内

マスターセレクションガイドは最初の製品選択には充分の資料を揃えています。本セレクション中のセレクションガイドとデータののっているページに記載されている全製品は他の全てのインデックスにも入っています。

ディジタルセレクションの最初の２ページには主要なディジタルファミリーの性能比較がのっています。次のページからはそのファミリーが機能グループ毎に分類されています（例えばアリスメティック，バッファ／インバータ…と云うように）。その次にのせてあるのは各メーカーのデータシートです。このデータシートを見つけるにはセレクションガイドにのっているページをめくって下さい。

カルキュレーター用，時計用チップ，電子オルガン用回路はこのセクションでなく，リニアーコンシューマーセクションに詳細に紹介されています。

このセクションではパッケージにはふれていません。パッケージ形状のサフィックスについての情報は"パーツナンバーガイド"を参照して下さい。

マスターセレクションガイドの全ページ，ミリタリー温度範囲（－５５℃～－１２５℃）の製品は剣じるし（　）をメーカー名の前につけてあります。メーカー名は通常簡略化はしていません。簡略化されているものについては１３７ページにその説明があります。

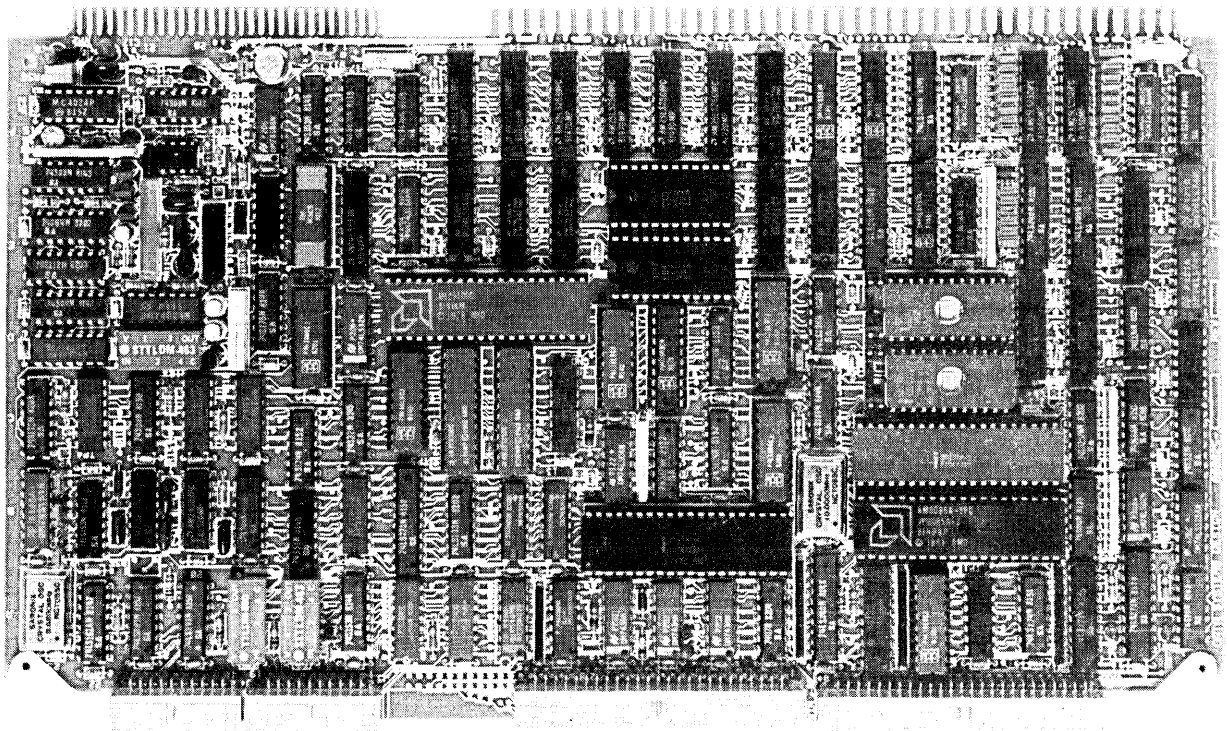
For Key Data On Every IC On This Board, The Place To Look Is...



The Data System Design 7215 is a single-board controller with pipelined architecture that can simultaneously control Winchester, streaming tape, and floppy drives.

Device No.	Description
AM25LS2569	Up-Down Binary Counter with Synchronous Preset
AM2910	Dual Retriggerable Monostable Multivibrator
AM26S02	Programmable Schottky Read-Only Memory
AM27S35	12-Bit Microprogram Controller
AM8085	Complete 8-Bit Parallel Central Processing Unit
CA3130	5-to-16-Volt Single Stash Supply Op Amp
2732	4096 x 8 TTL PROM
8237	DMA Controller
DM7438	Quad 2-Input TTL NAND Buffer
DM8334	8-Bit Addressable TTL Latch
DS75107	Differential Line Receiver
F74S132	Quad 2-Input NAND Schmitt-Trigger
MC4024	Dual Voltage-Controlled TTL Multivibrator
MK4802	2048 x 8 Static NMOS RAM
PAL16L8	Field Programmable Logic Array
PAL16R6	Field Programmable Logic Array
PAL16R8	Field Programmable Logic Array
7407	Hex Buffer/Driver
74123	Dual Retriggerable Monostable Multivibrator
74368	Hex Inverter, 3-State
74LS02	Quad 2-Input TTL NOR Gate
74LS04	Hex Inverter
74LS125	Quad Gated TTL Buffer, 3-State
74LS138	3 Line to 8 Line Decoder/Demultiplexer
74LS151	8-Input Multiplexer
74LS161	Binary Counter
74LS166	8-Bit Parallel-In, Serial-Out Shift Register with Clear

Device No.	Description
74LS174	Hex D-Type Edge-Triggered Flip-Flop with Clear
74LS240	Octal Bus Driver (Schmitt Trigger)
74LS244	Octal Bus Driver (Schmitt Trigger), Non-Inverting
74LS257	Quad 2-Input Multiplexer, Non-Inverting
74LS273	Octal D-Type Edge-Triggered Flip-Flop, 3-State
74LS299	8-Bit Universal Shift Register
74LS365	Hex Buffer, 3-State
74LS373	8-Bit Latch
74LS374	Octal D-Type Edge-Triggered Flip-Flop, 3-State
74LS393	Dual 4-Bit Binary Counter
74LS533	D-Type 8-Bit Latch
74LS670	16-Bit (4x4) Register File with Simultaneous Read/Write
74S00	Quad 2-Input NAND Gate
74S03	Quad 2-Input NAND Gate, Open Collector
74S04	Hex Inverter
74S112	Dual "J-K" Negative Edge-Triggered Flip-Flop
74S151	8-Input Multiplexer
74S153	Dual 4-Input Multiplexer
74S174	Hex D-Type Edge-Triggered Flip-Flop with Clear
74S175	Quad D-Type Edge-Triggered Flip-Flop with Clear
74S240	Line Driver, Single Ended, 3-State, Inverting
74S32	Quad 2-Input OR Gate
74S51	Dual 2-Wide 2-Input AND-OR-Invert Gate
74S64	4-2-3-2-Input AND-OR-Invert Gate
74S74	Dual D-Type Positive Edge-Triggered Flip-Flop
75110	Line Driver, Differential, Twisted Pair Level Shifting

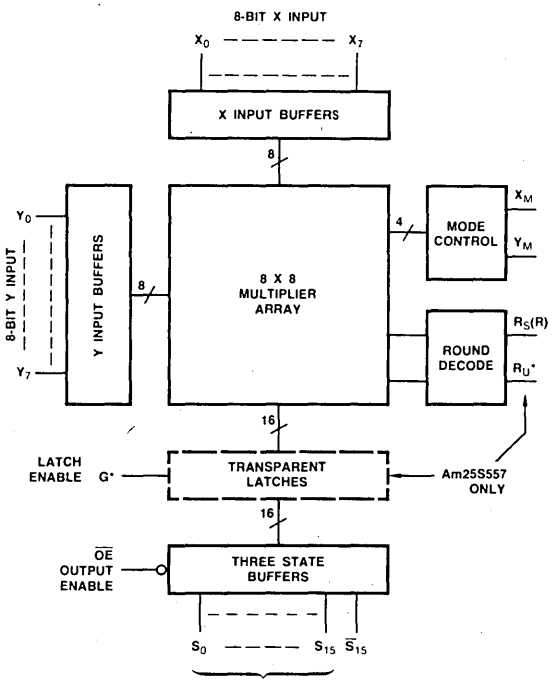
BIPOLAR LSI AND SUPPORT PRODUCTS
Digital Signal Processing Products

Am25S557/Am25S558 8-Bit by 8-Bit Combinatorial Multiplier

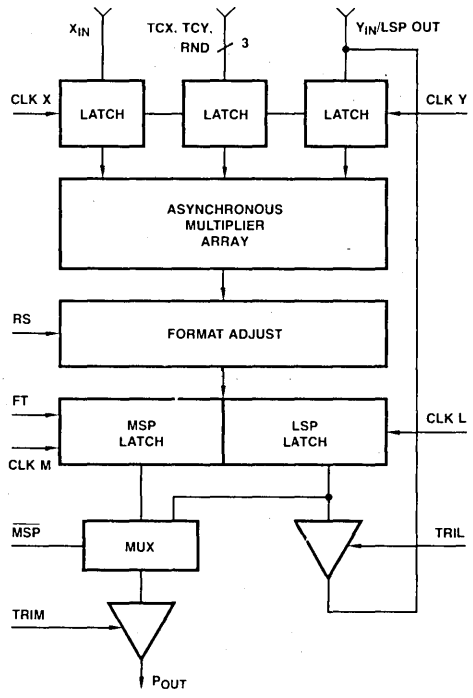
- Multiplies Two 8-Bit Numbers – 16-Bit Output
- Combinatorial – No Clocks Required
- Full 8 x 8 Multiply in 45ns (Typ)
- Cascades to 16 x 16 in 110ns (Typ)
- Expandable to Multiples of Eight Bits
- MSB and $\overline{MSB}$ Outputs for Easy Expansion
- Unsigned, Twos Complement or Mixed Operands
- Implements Common Rounding Algorithms with Additional Logic
- 3-State Outputs
- Transparent 16-Bit Latch in Am25S557
- Industry Standard Pinouts
- 40-Pin DIP



*Pin 11 is G for Am25S557 and R_U for Am25S558.

Am29516/Am29517 16 by 16 Combinatorial Multipliers

- Twos Complement, Unsigned or Mixed Numbers
- LSP Available at Y_{IN} or P_{OUT}
- Am29516 Pin Compatible with TRW MPY-16HJ
- Am29517 Has Single Clock Input with X, Y and P Clock Enables
- Internal ECL Array Provides Multiply Time of 75ns (Typ)
- 64-Pin DIP

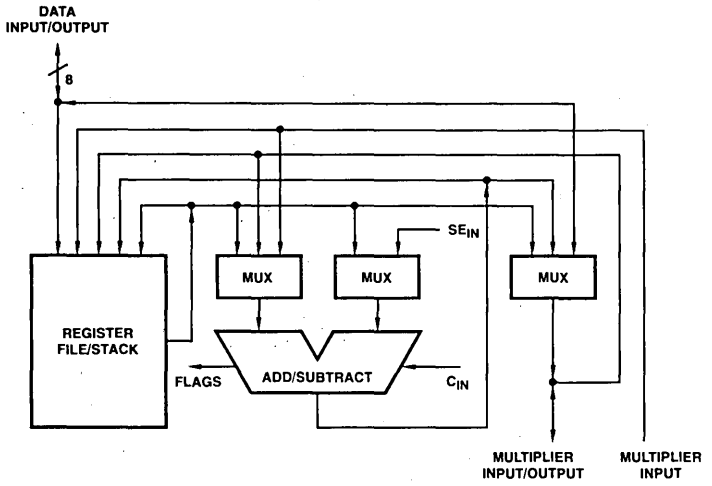


© IC MASTER 1983

SUPPORT PRODUCTS

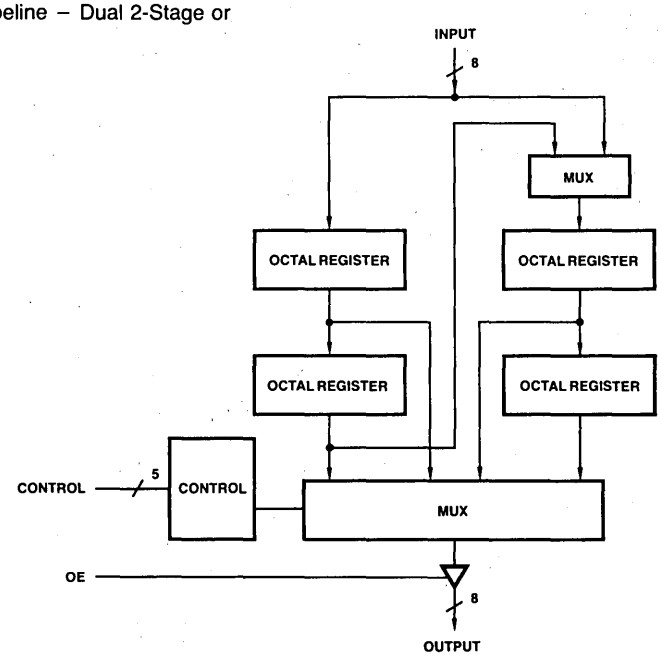
Am29501 Programmable Signal Processor

- 8-Bit Slice
- 8-Bit ALU
- Six 8-Bit Register File
- Designed to Operate with Am29516/Am29517
- 29-Bit Microcode Control
- Multiple Simultaneous Data Moves
- Supports 100ns Microcycle Time
- 64-Pin DIP



Am29520/Am29521 Multilevel Pipeline Register

- Four 8-Bit Vipeline Registers
- All Registers Mux to Output
- Programmable Pipeline – Dual 2-Stage or Single 4-Stage
- Am29520 Has Separate Load and Shift
- 24-Pin 0.3" Wide DIP



© IC MASTER 1983

Am29540 Programmable FFT Address Sequencer

- Generates Data/Coefficient Addresses
- Programmable Length – 2 to 65536 Point Transforms
- DIF or DIT Algorithms
- Bit-Reversed I or O (In-Place)
- Radix-2 or -4 Address Sequence
- Radix-2 RVI Transforms
- 40-Pin DIP

BIPOLAR LSI AND SUPPORT PRODUCTS
20-Pin IMOX™ Programmable Array Logic Elements

AMD 20-Pin PAL* Family

- **Fast**
  - High speed "A" versions (t_{pd} = 25ns, t_s = 20ns, t_{co} = 15ns, max)
  - Standard speed versions (t_{pd} = 35ns, t_s = 30ns, t_{co} = 25ns, max)
- **Flexible**
  - User programmability allows customized designs
  - Eases design updates in prototype or product
- **Low Cost**
  - Reduces board space/chip count
  - Reduces design time
  - Reduces inventory cost
- **Reliable**
  - Proven Platinum-Silicide fuse technology
  - Fully AC and DC tested
  - Preload of output registers allows full logical testing

FUNCTIONAL DESCRIPTION

AMD PALs are high speed electrically programmable array logic elements. They utilize the familiar sum-of-products (AND-OR) structure allowing users to program custom logic functions to fit most applications precisely.

Initially the AND gates are connected, via fuses, to both the true and complement of every input. By selective programming of fuses the AND gates may be "connected" to only the true input (by blowing the complement fuse), to only the complement input (by blowing the true fuse), or to neither type of input (by blowing both fuses) establishing a logical "don't care." When both the true and complement fuses are left intact a logical false results on the output of the AND gate. An AND gate with all fuses blown will assume the logical true state. The outputs of the AND gates are connected to fixed OR gates. The only limitations imposed are the number of inputs to the AND gates (up to 16) and the number of AND gates per OR (up to 8).

The part types in the AMD PAL family are differentiated by the allocation of registered (with internal feedback) and combinatorial (bi-directional and dedicated) outputs. All combinatorial AMD PALs are available in both active HIGH (AND-OR) and active LOW (AND-OR-INVERT) versions.

AMD PAL FAMILY CHARACTERISTICS

All members of the AMD PAL family have common electrical characteristics and programming procedures. All parts in this family are produced with a fusible link at each input to the AND gate array. Connections may be selectively removed by applying appropriate voltages to the circuit.

All parts are fabricated with AMD's fast programming, highly reliable Platinum-Silicide Fuse technology. Utilizing an easily implemented programming algorithm, these products can be rapidly programmed to any customized pattern. Extra test words are pre-programmed during manufacturing to insure extremely high field programming yields (>98%), and provide extra test paths to achieve excellent parametric correlation.

Platinum-Silicide was selected as the fuse link material to achieve a well controlled melt rate resulting in large non-conductive gaps that ensure very stable, long term reliability. Extensive operating testing has proven that this low-field, large-gap technology offers the best reliability for fusible link programmable logic.

The AMD PAL family is manufactured using Advanced Micro Devices' selective oxidation process, IMOX. This advanced process permits an increase in density and a decrease in internal capacitance resulting in the fastest possible programmable logic devices.

The AMD PAL family also incorporates the unique capability of preloading the output registers during testing to any desired value. Preload is invaluable when testing the logical functionality of a programmed AMD PAL.

AMD PAL FAMILY TABLE

BIPOLAR LSI AND SUPPORT PRODUCTS
20-Pin IMOX™ Programmable Array Logic Elements

MAXIMUM RATINGS (Above which the useful life may be impaired)

Storage Temperature	−65 to +150°C
Temperature (Ambient) Under Bias	−55 to +125°C
Supply Voltage to Ground Potential (Pin 20 to Pin 10) Continuous	−0.5 to +7V
DC Voltage Applied to Outputs (Except During Programming)	−0.5V to +V_{CC} max
DC Voltage Applied to Outputs During Programming	21V
Output Current Into Outputs During Programming (Max Duration of 1 sec)	200mA
DC Input Voltage	−0.5 to +5.5V
DC Input Current	−30 to +5mA

OPERATING RANGE

		Commercial		Military		
Parameters	**Description**	**Min**	**Max**	**Min**	**Max**	**Units**
V_{CC}	Supply Voltage	4 75	5.25	4.50	5.50	V
T_A	Operating Free Air Temperature	0	75	−55		°C
T_C	Operating Case Temperature				125	°C

ELECTRICAL CHARACTERISTICS OVER OPERATING RANGE (Unless Otherwise Noted)

Parameters	**Description**	**Test Conditions**			**Min**	**Typ** (Note 1)	**Max**	**Units**
V_{OH}	Output HIGH Voltage	V_{CC} = MIN, V_{IN} = V_{IH} or V_{IL}	I_{OH} = −3.2mA	COM'L	2.4	3.5		Volts
			I_{OH} = −2mA	MIL				
V_{OL}	Output LOW Voltage	V_{CC} = MIN, V_{IN} = V_{IH} or V_{IL}	I_{OL} = 24mA	COM'L			0.50	Volts
			I_{OL} = 12mA	MIL				
V_{IH} (Note 2)	Input HIGH Level	Guaranteed input logical HIGH voltage for all inputs			2.0			Volts
V_{IL} (Note 2)	Input LOW Level	Guaranteed input logical LOW voltage for all inputs					0.8	Volts
I_{IL}	Input LOW Current	V_{CC} = MAX, V_{IN} = 0.40V				−20	−250	μA
I_{IH}	Input HIGH Current	V_{CC} = MAX, V_{IN} = 2.7V					25	μA
I_I	Input HIGH Current	V_{CC} = MAX, V_{IN} = 5.5V					1.0	mA
I_{SC}	Output Short Circuit Current	V_{CC} = MAX, V_{OUT} = 0.5V (Note 3)			−30	−60	−90	mA
I_{CC}	Power Supply Current	All inputs = GND, V_{CC} = MAX	16L8, 16H8, 16HD8, 16LD8 16L8A, 16H8A, 16HD8A, 16LD8A			110	155	mA
			16R8, 16R6, 16R4 16R8A, 16R6A, 16R4A			120	180	
V_I	Input Clamp Voltage	V_{CC} = MIN, I_{IN} = −18mA				−0.9	−1.2	Volts
I_{OZH}	Output Leakage Current (Note 4)	V_{CC} = MAX, V_{IL} = 0.8V V_{IH} = 2.0V	V_O = 2.7V				100	μA
I_{OZL}			V_O = 0.4V				−100	
C_{IN}	Input Capacitance	V_{IN} = 2.0V @f = 1MHz (Note 5)				6		pF
C_{OUT}	Output Capacitance	V_{OUT} = 2.0V @f = 1MHz (Note 5)				9		

Notes: 1. Typical limits are at V_{CC} = 5.0V and T_A = 25°C.
2. These are absolute values with respect to device ground and all overshoots due to system or tester noise are included.
3. Not more than one output should be tested at a time. Duration of the short circuit should not be more than one second. V_{OUT} = 0.5V has been chosen to avoid test problems caused by tester ground degradation.
4. I/O pin leakage is the worst case of I_{OZX} or I_{IX} (where X = H or L).
5. These parameters are not 100% tested, but are periodically sampled.

PROGRAMMING

Each AMD PAL fuse is programmed with a simple sequence of voltages applied to two control pins (1 and 11) and a programming voltage pulse applied to the output under programming. Addressing of the 2048 element fuse array is accomplished with normal TTL levels on eight input pins (five select the input line number and three select the product term number). V_{CC} is maintained at a normal level throughout the programming and verify cycle – no extra high levels are required.

The necessary sequence of levels for programming any fuse is shown in the Programming Timing Diagram. The address of each fuse in terms of Input Line Number and Product Term Line Number is defined by the Fuse Address Tables 1 and 2. Current, voltage and timing requirements for each pin are specified in the Programming Parameter Table below.

The 16L8, 16R8, 16R6, 16R4, 16H8, 16LD8 and 16HD8 use identical programming conditions and sequences.

After all programming has been completed, the entire array should be reverified at V_{CCL} and again at V_{CCH}. Reverification can be accomplished by reading all eight outputs in parallel rather than one at a time. The array fuse verification cycle checks that the correct array fuses have been blown and can be sensed by the outputs.

AMD PALs have been designed with many internal test features that are used to assure high programming yield and correct logical operation for a correctly programmed part.

An additional fuse is provided on each AMD PAL circuit to prevent unauthorized copying of AMD PAL fuse patterns when design security is desired. Blowing the security fuse blocks entry to the fuse pattern verify mode.

To blow the security fuse:
1. Power up part to V_{CCP}
2. Raise Pin 5 to V_{HH}.
3. Pulse Pin 11 from ground to V_{OP} for a 50μsec duration.
4. Perform a normal end-of-programming verify cycle at V_{CCL} and V_{CCH}. All fuse locations should be sensed as blown if the security fuse has been successfully blown.

Note that parts with the security fuse blown may not be returned as programming rejects.

AMD PALs normally have high programming yields (>98%). Programming yield losses are frequently due to poor socket contact, equipment out of calibration or improperly used.

PROGRAMMING PARAMETERS T_A = 25°C

Parameters	Description		Min	Typ	Max	Units
V_{HH}	Control Pin Extra High Level	Pin 1 @ 10–40mA	10	11	12	Volts

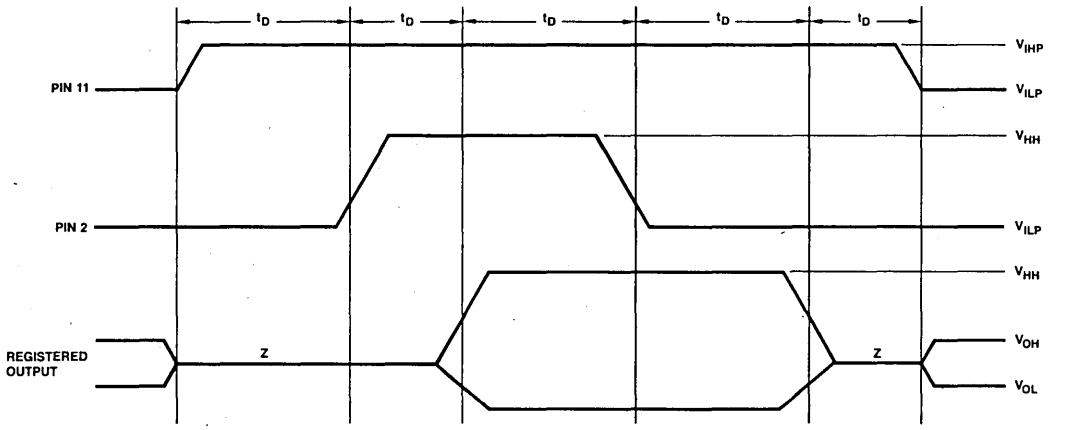
PRELOAD OF REGISTERED OUTPUTS

AMD PAL registered outputs are designed with extra circuitry to allow loading each register asynchronously to either a HIGH or LOW state. This feature simplifies testing since any initial state for the registers can be set to optimize test sequencing.

The pin levels and timing necessary to perform the PRELOAD function are detailed below:



Level forced on registered output pin during preload cycle	Output state at the output pin after cycle
V_{HH}	HIGH
0V to V_{CCH} or OPEN	LOW

AUTO CLOCK

Features

- ☐ **12 Hour, 4 Digit Auto Clock.**
- ☐ **Elapsed Time Counter (resettable, range to 99 hours).**
- ☐ **Calendar (4-year calendar with pin option for European date/month reversal).**
- ☐ **Ignition-Sensing Display Cut-off (to reduce battery drain when the auto is not operating).**
- ☐ **Crystal Input Accuracy (uses inexpensive 4.194 mHz crystal).**
- ☐ **Direct Display Drive (4-digit vacuum fluorescent displays, 24 Volts).**

Applications/Markets

- ☐ Automotive
- ☐ Avionics
- ☐ Marine
- ☐ Portable Clocks
- ☐ Industrial

General Description

The S4003 Auto Clock is a PMOS integrated circuit which has found wide application in auto, avionic and marine applications as a portable or dashboard clock and as an industrial timer.

A functional description of the inputs/outputs and registers follows:

1. **Set Inputs**—Left digits set and right digits set will index the selected register at a 2Hz rate. Indexing either input will not upset the unselected digits.

2. **Time Set Select**—Enables set inputs to the timekeeping register. When updating hours, the minutes display will blank out and MX1 digit will display A or P. Minutes will update in a normal manner and reset seconds to zero. Seconds will restart on release of the time set select line. When deselected, the time will continue to be displayed for 5 seconds ±1 seconds. AM and PM indications will switch on the transfer from 11:59 to 12:00.

4-BIT ARITHMETIC LOGIC UNIT

DESCRIPTION—The 'F181 is a 4-bit Arithmetic Logic Unit (ALU) which can perform all the possible 16 logic operations on two variables and a variety of arithmetic operations. It is 40% faster than the Schottky ALU and only consumes 30% as much power.

- **PROVIDES 16 ARITHMETIC OPERATIONS ADD, SUBTRACT, COMPARE, DOUBLE, PLUS TWELVE OTHER ARITHMETIC OPERATIONS**
- **PROVIDES ALL 16 LOGIC OPERATIONS OF TWO VARIABLES EXCLUSIVE-OR, COMPARE, AND, NAND, OR, NOR, PLUS TEN OTHER LOGIC OPERATIONS.**
- **FULL LOOKAHEAD FOR HIGH-SPEED ARITHMETIC OPERATION ON LONG WORDS**

FUNCTIONAL DESCRIPTION—The 'F181 is a 4-bit high-speed parallel Arithmetic Logic Unit (ALU). Controlled by the four Function Select inputs (S_0-S_3) and the Mode Control input (M), it can perform all the 16 possible logic operations or 16 different arithmetic operations on active-HIGH or active-LOW operands. The Function Table lists these operations.

When the Mode Control input (M) is HIGH, all internal carries are inhibited and the device performs logic operations on the individual bits as listed. When the Mode Control input is LOW, the carries are enabled and the device performs arithmetic operations on the two 4-bit words. The device incorporates full internal carry lookahead and provides for either ripple carry between devices using the C_{n+4} output, or for carry lookahead between packages using the signal $\overline{P}$ (Carry Propagate) and $\overline{G}$ (Carry Generate). In the Add mode, $\overline{P}$ indicates that $\overline{F}$ is 15 or more, while $\overline{G}$ indicates that $\overline{F}$ is 16 or more. In the Subtract mode, $\overline{P}$ indicates that $\overline{F}$ is zero or less, while $\overline{G}$ indicates that $\overline{F}$ is less than zero. $\overline{P}$ and $\overline{G}$ are not affected by carry in. When speed requirements are not stringent, it can be used in a simple Ripple Carry mode by connecting the Carry output (C_{n+4}) signal to the Carry input (C_n) of the next unit. For high-speed operation the device is used in conjunction with a carry lookahead circuit. One carry lookahead package is required for each group of four 'F181 devices. Carry lookahead can be provided at various levels and offers high speed capability over extremely long word lengths.

The A=B output from the device goes HIGH when all four $\overline{F}$ outputs are HIGH and can be used to indicate logic equivalence over four bits when the unit is in the Subtract mode. The A=B output is open collector and can be wired-AND with other A=B outputs to give a comparison for more than four bits. The A=B signal can also be used with the C_{n+4} signal to indicate A>B and A<B.

The Function Table lists the arithmetic operations that are performed without a carry in. An incoming carry adds a one to each operation. Thus, select code LHHL generates A minus B minus 1 (2s complement notation) without a carry in and generates A minus B when a carry is applied. Because subtraction is actually performed by complementary addition (1s complement), a carry out means $\overline{\text{borrow}}$; thus a carry is generated when there is no underflow and no carry is generated when there is underflow. As indicated, this device can be used with either active-LOW inputs producing active-LOW outputs or with active-HIGH inputs producing active-HIGH outputs. For either case the table lists the operations that are performed to the operands labeled inside the logic system.

54F/74F190 • 54F/74F191

UP/DOWN COUNTERS
(WITH PRESET AND RIPPLE CLOCK)

DESCRIPTION—The 'F190 is a reversible BCD(8421) decade counter. The 'F191 is a reversible modulo 16 binary counter. Both feature synchronous counting and asynchronous presetting. The preset feature allows the 'F190 and 'F191 to be used in programmable dividers. The Count Enable input, the Terminal Count output and the Ripple Clock output make possible a variety of methods of implementing multistage counters. In the counting modes, state changes are initiated by the rising edge of the clock.

- **HIGH-SPEED—110 MHz TYPICAL COUNT FREQUENCY**
- **SYNCHRONOUS COUNTING**
- **ASYNCHRONOUS PARALLEL LOAD**
- **CASCADABLE**

FUNCTIONAL DESCRIPTION—The 'F190/191 are synchronous up/down counters. The 'F190 is a BCD decade counter while the 'F191 is organized as a 4 bit binary counter. Both contain four edge triggered flip-flops with internal gating and steering logic to provide individual preset, count-up and count-down operations.

Each circuit has an asynchronous parallel load capability permitting the counter to be preset to any desired number. When the Parallel Load ($\overline{PL}$) input is LOW, information present on the Parallel Data inputs (P_0-P_3) is loaded into the counter and appears on the Q outputs. This operation overrides the counting functions, as indicated in the Mode Select Table.

A HIGH signal on the $\overline{CE}$ input inhibits counting. When $\overline{CE}$ is LOW, internal state changes are initiated synchronously by the LOW-to-HIGH transition of the clock input. The direction of counting is determined by the $\overline{U}$/D input signal, as indicated in the Mode Select Table. $\overline{CE}$ and $\overline{U}$/D can be changed with the clock in either state, provided only that the recommended setup and hold times are observed.

Two types of outputs are provided as overflow/underflow indicators. The terminal count(TC) output is normally LOW. It goes HIGH when the circuits reach zero in the count down mode or 9 ('F190) or 16 ('F191) in the count up mode. The TC output will then remain HIGH until a state change occurs, whether by counting or presetting or until $\overline{U}$/D is changed. The TC output should not be used as a clock signal because it is subject to decoding spikes.

The TC signal is also used internally to enable the Ripple Clock ($\overline{RC}$) output. The $\overline{RC}$ output is normally HIGH. When $\overline{CE}$ is LOW and TC is HIGH, the $\overline{RC}$ output will go LOW when the clock next goes LOW and will stay LOW until the clock goes HIGH again. This feature simplifies the design of multistage counters, as indicated in *Figures a* and *b*. In *Figure a*, each $\overline{RC}$ output is used as the clock input for the next higher stage. This configuration is particularly advantageous when the clock source has a limited drive capability, since it drives only the first stage. To prevent counting in all stages it is only necessary to inhibit the first stage, since a HIGH signal on $\overline{CE}$ inhibits the $\overline{RC}$ output pulse, as indicated in the $\overline{RC}$ Truth Table. A disadvantage of this configuration, in some applications, is the timing skew between state changes in the first and last stages. This represents the cumulative delay of the clock as it ripples through the preceding stages.

A method of causing state changes to occur simultaneously in all stages is shown in *Figure b*. All clock inputs are driven in parallel and the $\overline{RC}$ outputs propagate the carry/borrow signals in ripple fashion. In this configuration the LOW state duration of the clock must be long enough to allow the negative-going edge of the carry/borrow signal to ripple through to the last stage before the clock goes HIGH. There is no such restriction on the HIGH state duration of the clock, since the $\overline{RC}$ output of any device goes HIGH shortly after its CP input goes HIGH.

The configuration shown in *Figure c* avoids ripple delays and their associated restrictions. The $\overline{CE}$ input for a given stage is formed by combining the TC signals from all the preceding stages. Note that in order to inhibit counting an enable signal must be included in each carry gate. The simple inhibit scheme of *Figures a* and *b* doesn't apply, because the TC output of a given stage is not affected by its own $\overline{CE}$.

UP/DOWN COUNTERS
(WITH SEPARATE UP/DOWN CLOCKS)

DESCRIPTION—The 'F192 is an up/down BCD decade (8421) counter. The 'F193 is an up/down modulo-16 binary counter. Separate Count Up and Count Down Clocks are used, and in either counting mode the circuits operate synchronously. The outputs change state synchronously with the LOW-to-HIGH transitions on the clock inputs.

Separate Terminal Count UP and Terminal Count Down outputs are provided that are used as the clocks for a subsequent stage without extra logic, thus simplifying multistage counter designs. Individual preset inputs allow the circuit to be used as a programmable counter. Both the Parallel Load ($\overline{PL}$) and the Master Reset (MR) inputs asynchronously override the clocks.

© IC MASTER 1983

FUNCTIONAL DESCRIPTION—The 'F192, 193 are asynchronously presettable counters. The 'F192 is a decade counter while the 'F193 is organized for 4 bit binary operation. They both contain four edge triggered flip-flops, with internal gating and steering logic to provide master reset, individual preset, count up and count down operations.

A LOW-to-HIGH transition on the CP input to each flip-flop causes the output to change state. Synchronous switching, as opposed to ripple counting, is achieved by driving the steering gates of all stages from a common Count Up line and a common Count Down line, thereby causing all state changes to be initiated simultaneously. A LOW-to-HIGH transition on the Count Up input will advance the count by one; a similar transition on the Count Down input will decrease the count by one. While counting with one clock input, the other should be held HIGH, as indicated in the Function Table. Otherwise, the circuit will either count by twos or not at all, depending on the state of the first flip-flop, which cannot toggle as long as either clock input is LOW.

The Terminal Count Up ($\overline{TC}_U$) and Terminal Count Down ($\overline{TC}_D$) outputs are normally HIGH. When the circuit has reached the maximum count state; 9 ('F192) or 16 ('F193), the reset HIGH-to-LOW transition of the Count Up Clock will cause $\overline{TC}_U$ to go LOW. $\overline{TC}_U$ will stay LOW until CP_U goes HIGH again, thus effectively repeating the Count Up Clock, but delayed by two gate delays. Similarly, the $\overline{TC}_D$ output will go LOW when the circuit is in the zero state and the Count Down Clock goes LOW. Since the $\overline{TC}$ outputs repeat the clock waveforms, they can be used as the clock input signals to the next higher order circuit in a multistage counter.

$$\overline{TC}_U = Q_0 \bullet Q_3 \bullet \overline{CP}_U$$
$$\overline{TC}_D = \overline{Q}_0 \bullet \overline{Q}_1 \bullet \overline{Q}_2 \bullet \overline{Q}_3 \bullet \overline{CP}_D$$

Both the 'F192 and the 'F193 have an asynchronous parallel load capability permitting the counter to be preset. When the Parallel Load ($\overline{PL}$) and the Master Reset (MR) inputs are LOW, information present on the Parallel Data input (P_0 - P_3) is loaded into the counter and appears on the outputs regardless of the conditions of the clock inputs. A HIGH signal on the Master Reset input will disable the preset gates, override both clock inputs, and latch each Q output in the LOW state. If one of the clock inputs is LOW during and after a reset or load operation, the next LOW-to-HIGH transition of that clock will be interpreted as a legitimate signal and will be counted.

54F/74F373

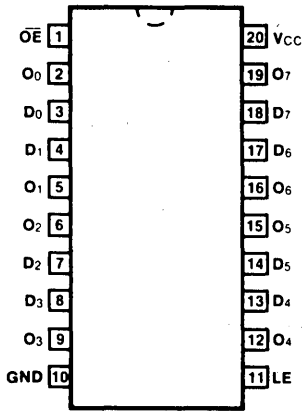
OCTAL TRANSPARENT LATCH

(With 3-State Outputs)

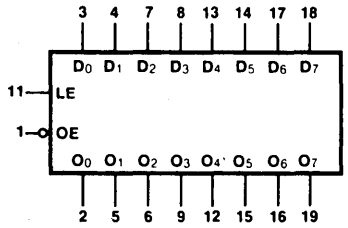
DESCRIPTION — The 'F373 consists of eight latches with 3-state outputs for bus organized system applications. The flip-flops appear transparent to the data when Latch Enable (LE) is HIGH. When LE is LOW, the data that meets the setup times is latched. Data appears on the bus when the Output Enable ($\overline{OE}$) is LOW. When $\overline{OE}$ is HIGH the bus output is in the high impedance state.

- **EIGHT LATCHES IN A SINGLE PACKAGE**
- **3-STATE OUTPUTS FOR BUS INTERFACING**

CONNECTION DIAGRAM



LOGIC SYMBOL



V_{CC} = Pin 20
GND = Pin 10

ORDERING CODE:

PKGS	COMMERCIAL GRADE V_{CC} = +5.0 V ±5%, T_A = 0°C to +70°C	MILITARY GRADE V_{CC} = +5.0 V ±10%, T_A = -55°C to +125°C	PKG TYPE
Plastic DIP (P)	74F373PC		9Z
Ceramic DIP (D)	74F373DC	54F373DM	4E
Flatpak (F)	74F373FC	54F373FM	4F

INPUT LOADING/FAN-OUT:

PIN NAMES	DESCRIPTION	54F/74F (U.L.) HIGH/LOW
$D_0 - D_7$	Data Inputs	0.5/0.375
LE	Latch Enable Input (Active HIGH)	0.5/0.375
$\overline{OE}$	Output Enable Input (Active LOW)	0.5/0.375
$O_0 - O_7$	3-State Latch Outputs	25/12.5

FUNCTIONAL DESCRIPTION — The 'F373 contains eight D-type latches with 3-state output buffers. When the Latch Enable (LE) input is HIGH, data on the D_n inputs enters the latches. In this condition the latches are transparent, i.e., a latch output will change state each time its D input changes. When LE is LOW the latches store the information that was present on the D inputs a setup time preceding the HIGH-to-LOW transition of LE. The 3-state buffers are controlled by the Output Enable ($\overline{OE}$) input. When $\overline{OE}$ is LOW, the buffers are in the bi-state mode. When $\overline{OE}$ is HIGH the buffers are in the high impedance mode but this does not interfere with entering new data into the latches.

LOGIC DIAGRAM

DIGITAL

Fairchild

© IC MASTER 1983

FUNCTIONAL DESCRIPTION — The 'F374 consists of eight edge-triggered flip-flops with individual D-type inputs and 3-state true outputs. The buffered clock and buffered Output Enable are common to all flip-flops. The eight flip-flops will store the state of their individual D inputs that meet the setup and hold times requirements on the LOW-to-HIGH Clock (CP) transition. With the Output Enable ($\overline{OE}$) LOW, the contents of the eight flip-flops are available at the outputs. When the $\overline{OE}$ is HIGH, the outputs go to the high impedance state. Operation of the $\overline{OE}$ input does not affect the state of the flip-flops.

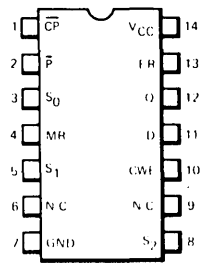
54F/74F401

CYCLIC REDUNDANCY CHECK GENERATOR/CHECKER

DESCRIPTION—The 'F401 Cyclic Redundancy Check (CRC) generator/checker implements the most widely used error detection scheme in serial digital data handling systems. On transmission, the data stream is encoded by dividing it by a set polynomial. The remainder is appended to the message as check bits. Upon reception, this data stream is divided by the same polynomial and if there is no remainder, there are no detectable errors.

- **EIGHT SELECTABLE POLYNOMIALS**
- **ERROR INDICATOR**
- **MORE EFFICIENT THAN PARITY IN CHECKING ERRORS**
- **HIGH-SPEED DATA RATE**
- **SUPPLY CURRENT 70 mA TYP**

CONNECTION DIAGRAM
DIP (TOP VIEW)



Pins 6 and 9 not connected.

NOTE:
The Flatpak version has the same pinouts (Connection Diagram) as the Dual In-line Package.

FUNCTIONAL DESCRIPTION—The 'F401 is a 16-bit programmable device which operates on serial data streams and provides a means of detecting transmission errors. Cyclic encoding and decoding schemes for error detection are based on polynomial manipulation in modulo arithmetic. For encoding, the data stream (message polynomial) is divided by a selected polynomial. This division results in a remainder which is appended to the message as check bits. For error checking, the bit stream containing both data and check bits is divided by the same selected polynomial. If there are no detectable errors, this division results in a zero remainder. Although it is possible to choose many generating polynomials of a given degree, standards exist that specify a small number of useful polynomials. The 'F401 implements the polynomials listed in *Table 1* by applying the appropriate logic levels to the select pins S_0, S_1 and S_2.

The 'F401 consists of a 16-bit register, a Read Only Memory ($\overline{ROM}$) and associated control circuitry as shown in the block diagram. The polynomial control code presented at inputs S_0, S_1 and S_2 is decoded by the ROM, selecting the desired polynomial by establishing shift mode operation on the register with Exclusive OR gates at appropriate inputs. To generate the check bits, the data stream is entered via the Data inputs (D), using the HIGH-to-LOW transition of the Clock input ($\overline{CP}$). This data is gated with the most significant output (Q) of the register, and controls theExclusive OR gates (*Figure 1*). The Check Word Enable (CWE) must be held HIGH while the data is being entered. After the last data bit is entered, the CWE is brought LOW and the check bits are shifted out of the register and appended to the data bits using external gating (*Figure 2*).

To check an incoming messsage for errors, both the data and check bits are entered through the D input with the CWE input held HIGH. The 'F401 is not in the data path, but only monitors the message. The Error Output becomes valid after the last check bit has been entered into the 'F401 by a HIGH-to-LOW transition of $\overline{CP}$. If no detectable errors have occurred during the data transmission, the resultant internal register bits are all LOW and the Error Outputs (ER) is LOW. If a detectable error has occurred, ER is HIGH.

A HIGH on the Master Reset input (MR) asynchronously clears the register. A LOW on the Preset input ($\overline{P}$) asynchronously sets the entire register if the control code inputs specify a 16-bit polynomial; in the case of 12 or 8-bit check polynomials only the most significant 12 or 8 register bits are set and the remaining bits are cleared.

FIG. 1
EQUIVALENT CIRCUIT FOR $X^{16} + X^{15} + X^2 + 1$

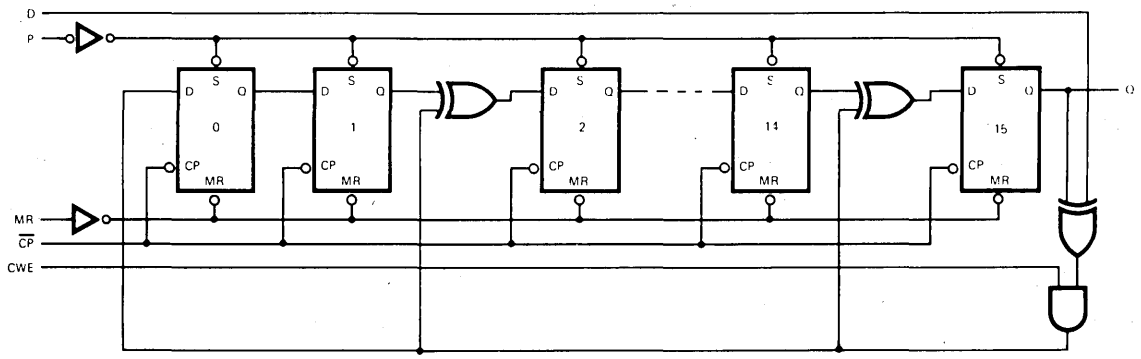

FIG. 2
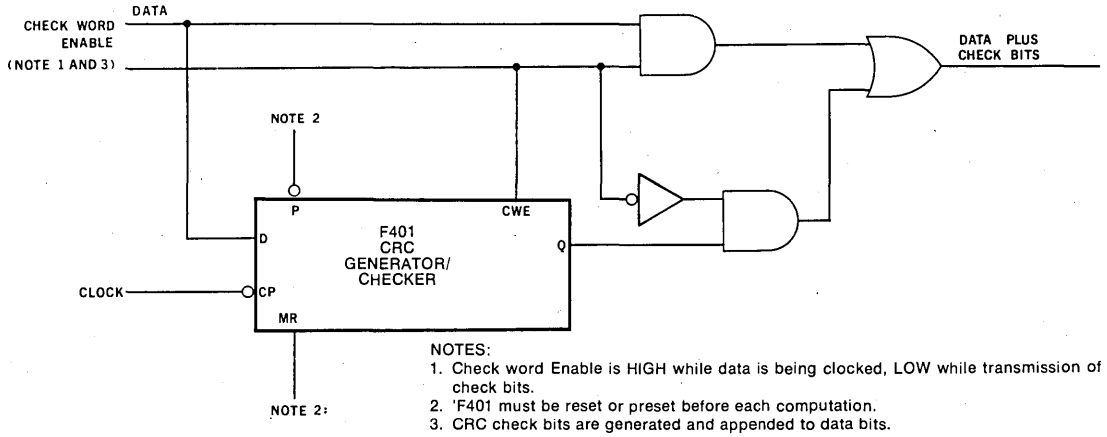
CHECK WORD GENERATION



NOTES:
1. Check word Enable is HIGH while data is being clocked, LOW while transmission of check bits.
2. 'F401 must be reset or preset before each computation.
3. CRC check bits are generated and appended to data bits.

54F/74F402
EXPANDABLE CYCLIC REDUNDANCY CHECK GENERATOR/CHECKER

DESCRIPTION—The 'F402 expandable Cyclic Redundancy Check (CRC) Generator/Checker is an expandable version of the 'F401. It provides an advanced tool for the implementation of the most widely used error detection scheme in serial digital handling systems. A 4-bit control input selects one-of-six generator polynomials. The list of polynomials includes CRC-16, CRC-CCITT and Ethernet, as well as three other standard polynomials (56th order, 48th order, 32nd order). Individual clear and preset inputs are provided for floppy disk and other applications. The Error output indicates whether or not a transmission error has occurred. The CWG Control input inhibits feedback during check word transmission. The 'F402 is compatible with Fairchild Advanced Schottky TTL (FAST) devices and is fully compatible with all TTL families.

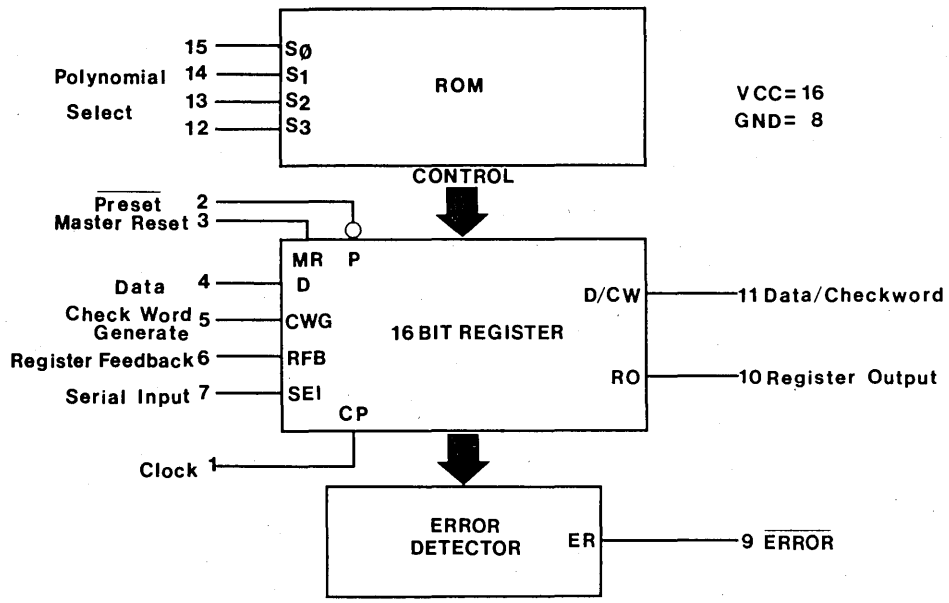
FUNCTIONAL DESCRIPTION—The '74F402 Expandable Cyclic Redundancy Check (CRC) Generator/Checker is an expandable 16-bit programmable device which operates on serial data streams and provides a means of detecting transmission errors. Cyclic encoding and decoding schemes for error detection are based on polynomial manipulation in modulo arithmetic. For encoding, the data stream (message polynomial) is divided by a selected polynomial. This division results in a remainder (or residue) which is appended to the message as check bits. For error checking, the bit stream containing both data and check bits is divided by the same selected polynomial. If there are no detectable errors, this division results in a zero remainder. Although it is possible to choose many generating polynomials of a given degree, standards exist that specify a small number of useful polynomials. The '74F402 implements the polynomials listed in *Table 1* by applying the appropriate logic levels to the select pins S_0, S_1, S_2, and S_3.

BLOCK DIAGRAM



The '74F402 consists of a 16 bit register, a Read Only Memory (ROM) and associated control circuitry as shown in the Block Diagram. The polynomial control code presented at inputs S_0, S_1, S_2, and S_3 is decoded by the ROM, selecting the desired polynomial or part of a polynomial by establishing shift mode operation on the register with Exclusive OR (XOR) gates at appropriate inputs. To generate the check bits, the data stream is entered via the Data Inputs (D), using the Low-to-High transition of the Clock Input (CP). This data is gated with the most significant Register Output (RO) via the Register Feedback Input (RFB), and controls the XOR gates. The Check Word Generate (CWG) must be held High while the data is being entered. After the last data bit is entered, the CWG is brought Low and the check bits are shifted out of the register(s) and appended to the data bits (no external gating is needed).

© IC MASTER 1983

To check an incoming message for errors, both the data and check bits are entered through the D Input with the CWG Input held High. The Error Output becomes valid after the last check bit has been entered into the '74F402 by a Low-to-High transition of CP, with the exception of the Ethernet polynomial (see applications paragraph). If no detectable errors have occurred during the data transmission, the resultant internal register bits are all Low and the Error Ouput ($\overline{ER}$) is High. If a detectable error has occurred, $\overline{ER}$ is Low. $\overline{ER}$ remains valid until the next Low-to-High transition of CP or until the device has been preset or reset.

A High on the Master Reset Input (MR) asynchronously clears the entire register. A Low on the Preset Input ($\overline{P}$) asynchronously sets the entire register with the exception of:

1) The Ethernet residue selection, in which the registers containing the non-zero residue are cleared;
2) The 56th order polynomial, in which the 8 least significant register bits of the least significant device are cleared; and,
3) S = 0, in which all bits are cleared.

APPLICATIONS—In addition to polynomial selection there are four other capabilities provided for in the ROM. The first is set or clear selectability. The sixteen internal registers have the capability to be either set or cleared when $\overline{P}$ is brought low. This set or clear capability is done in four groups of 4 (see *Table 2*, PØ-P3). The second ROM capability (CØ) is in determining the polarity of the check word. As is the case with the Ethernet polynomial the check word can be inverted when it is appended to the data stream or as is the case with the other polynomials, the residue is appended with no inversion. Thirdly, the ROM contains a bit (C1) which is used to select the RFB input instead of the SEI input to be fed into the LSB. This is used when the polynomial selected is actually a residue (least significant) stored in the ROM. In conjunction with this is another bit (C2) in the ROM which indicates whether the selected location is a polynomial or a residue. If the latter then it inhibits the RFB input.

As mentioned previously, in general, upon a successful data transmission the CRC register has a zero residue. There is an exception to this, however, with respect to the Ethernet polynomial. This polynomial, upon a successful data transmission, has a non-zero residue in the CRC register $(C7\ 04\ DD\ 7B)_{16}$. In order to provide a no-error indication two ROM locations have been preloaded with the residue so that by selecting these locations and clocking the device one additional time, after the last check bit has been entered, will result in zeroing the CRC register. In this manner a no error indication is achieved.

With the present mix of polynomials the largest is 56th order requiring four devices while the smallest is 16th order requiring just one device. In order to accomodate multiplexing between high order polynomials (>16th order) and lower order polynomials, a location of all zero's is provided. This allows the user to choose a lower order polynomial even if the system is configured for a higher order one (see *Figure 3*).

PIN NAMES

PIN NAMES	DESCRIPTION	COMMENTS
S_0-S_3	Polynomial Select	Used to select one of the six polynomials programmed into the device. See *Table 1* for a breakdown of the entries.
$\overline{P}$	Preset	When LOW asynchronously sets the entire register based on the polynomial selected. In the cases of the ethernet residue selection or the all zero selection the register would be cleared. With respect to the 56 bit polynomial, in the least significant device only, the eight most significant bits of the register are set, the remaining bits are cleared. In all other cases all bits of the register are set (See *Table 2*).
MR	Master Reset	When HIGH asynchronously clears all bits of the register.
SEI	Serial Expansion Input	This input provides the capability for serially expanding the devices to accomodate higher order polynomials. When cascading devices, RO of the preceding device is connected to this input. When a device is used singly or is the least significant device, this input should be wired LOW. See *Figures 1* and *2*.
CP	Clock	Controls all register changes on the LOW to HIGH transition.
RFB	Register Feedback	This input in connected to RO of the most significant device.
CWG	Check Word Generate	This input when held HIGH allows for generation of the check word or for checking a serial data stream for errors. Bringing this input LOW, after the last data bit has been entered, allows the check word bits to be shifted out of the register and be appended to the data bits.
D	Data	The input through which data and/or check bits are entered for check word generation/error detection.
$\overline{ER}$	Error	This open collector ouput, when LOW, indicates that the contents of the register are not zero. When checking for errors, after the data and check bits have been cycled through the device(s), this output should be HIGH to indicate no error in transmission. In multiple device configurations the $\overline{ER}$ outputs are tied together.
RO	Register Output	The output for the most significant bit of the check word register. It is used to supply control to either RFB or SEI.
D/CW	Serial Data/Checkword	This output is controlled by the state of CWG and the polynomial selected. When CWG is HIGH the D input is output; when CWG is LOW the check word register bits are shifted out. (Note: When the Ethernet polynomial is selected and CWG is LOW, the check word bits are inverted.)

54F/74F403 • 54F/74F433

FIRST-IN FIRST OUT (FIFO) BUFFER MEMORY
FAIRCHILD TTL MACROLOGIC

DESCRIPTION—The 'F403/F433 is an expanable fall-through type high-speed First-In First-Out (FIFO) Buffer Memory optimized for high speed disc or tape controllers and communication buffer applications. It is organized as 16 or 64 words by four bits and may be expanded to any number of words or any number of bits (in multiples of four). Data may be entered or extracted asynchronously in serial or parallel, allowing economical implementation of buffer memories.

The 'F403/F433 has 3-state outputs which provide added versatility and is fully compatible with all TTL families.

- **10 MHz SERIAL OR PARALLEL DATA RATE**
- **SERIAL OR PARALLEL INPUT**
- **SERIAL OR PARALLEL OUTPUT**
- **EXPANDABLE WITHOUT EXTERNAL LOGIC**
- **3-STATE OUTPUTS**
- **FULLY COMPATIBLE WITH ALL TTL FAMILIES**
- **SLIM 24-PIN PACKAGE**

PIN NAME	DESCRIPTION	COMMENTS
D_0—D_3	Parallel Data Inputs	
D_S	Serial Data Input	
PL	Parallel Load Input	HIGH on PL enables D_0—D_3. Not edge triggered. Ones catching.
$\overline{CPSI}$	Serial Input Clock	Edge triggered. Activates on falling edge.
$\overline{IES}$	Serial Input Enable	Enables serial and parallel input when LOW.
$\overline{TTS}$	Transfer to Stack Input	A LOW on this pin initiates fall through.
$\overline{OES}$	Serial Output Enable Input	Enables serial and parallel output when LOW.
$\overline{TOS}$	Transfer Out Serial Input	A LOW on this pin enables a word to be transferred from the stack to the output register. (TOP must be HIGH also for the transfer to occur). Not edge triggered.
TOP	Transfer Out Parallel Input	A HIGH on this pin enables a word to be transferred from the stack to the output register. ($\overline{TOS}$ must be LOW for the transfer to occur). Not edge triggered.
$\overline{MR}$	Master Reset	Active LOW.
$\overline{EO}$	Output Enable	Active LOW.
$\overline{CPSO}$	Serial Output Clock Input	Edge triggered. Activates on falling edge.
Q_0—Q_3	Parallel Data Outputs	
Q_S	Serial Data Output	
$\overline{IRF}$	Input Register Full Output	LOW when input register is full (Note b).
$\overline{ORE}$	Output Register Empty Output	HIGH when output register contains valid data.

FUNCTIONAL DESCRIPTION—As shown in the block diagram the 'F403/F433 consists of three sections:

1. An Input Register with parallel and serial data inputs as well as control inputs and outputs for input handshaking and expansion.
2. A 4-bit wide, 14 or 62 word deep fall-through stack with self-contained control logic.
3. An Output Register with parallel and serial data outputs as well as control inputs and outputs for output handshaking and expansion.

Since these three sections operate asynchronously and almost independently, they will be described separately below:

Input Register (Data Entry):
The Input Register can receive data in either bit-serial or in 4-bit parallel form. It stores this data until it is sent to the fall-through stack and generates the necessary status and control signals.

Figure 1 is a conceptual logic diagram of the input section. As described later, this 5-bit register is initialized by setting the F3 flip-flop and resetting the other flip-flops. The Q-output of the last flip-flop (FC) is brought out as the "Input Register Full" output ($\overline{IRF}$). After initialization this output is HIGH.

Parallel Entry—A HIGH on the PL input loads the D_0—D_3 inputs into the F_0—F_3 flip-flops and sets the FC flip-flop. This forces the $\overline{IRF}$ output LOW indicating that the input register is full. During parallel entry, the $\overline{CPSI}$ input must be LOW. If parallel expansion is not being implemented, $\overline{IES}$ must be LOW to establish row mastership (see Expansion section).

© IC MASTER 1983

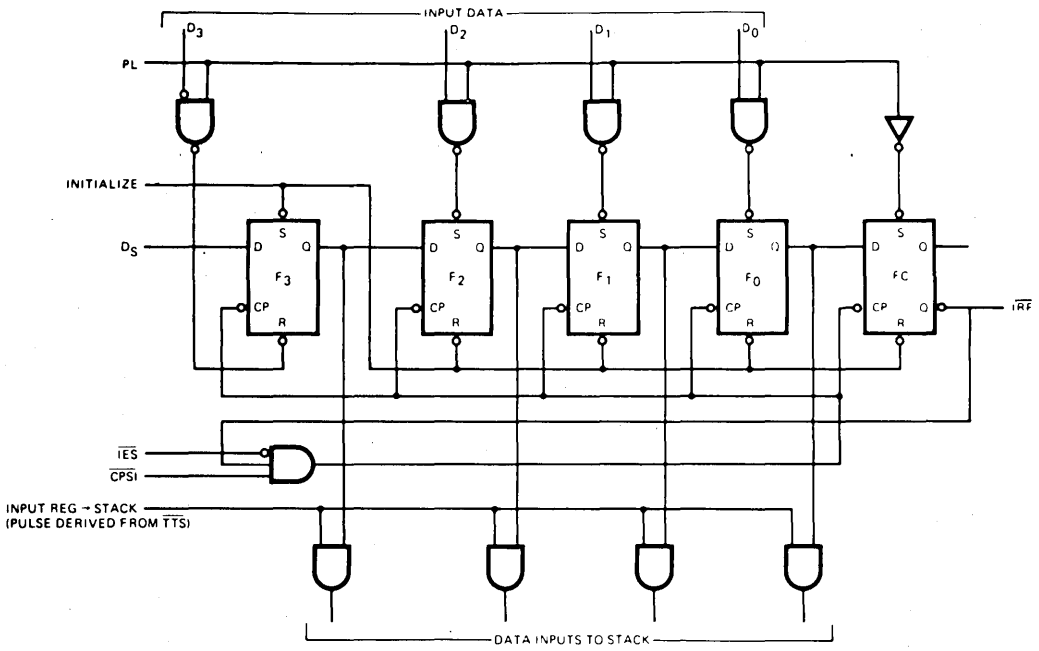

FIG. 1
CONCEPTUAL INPUT SECTION

Serial Entry—Data on the D_S input is serially entered into the F_3, F_2, F_1, F_0, FC shift register on each HIGH-to-LOW transition of the CPSI clock input, provided IES and PL are LOW.

After the fourth clock transition, the four data bits located in the four flip-flops F_0—F_3. The FC flip-flop is set, forcing the $\overline{IRF}$ output LOW and interanlly inhibiting $\overline{CPSI}$ clock pulses from effecting the register. *Figure 2* illustrates the final positions in a 'F403 resulting from a 64-bit serial bit train. B_0 is the first bit, B_{63} the last bit. Similar operation can be developed for 'F433.

Transfer to the Stack—The outputs of Flip-Flops F_0—F_3 feed the stack. A LOW level on the $\overline{TTS}$ input initiates a "fall-through" action. If the top location of the stack is empty, data is loaded into the stack and the input register is re-initialized. Note that this initialization is postponed until PL is LOW again. Thus, automatic FIFO action is achieved by connecting the $\overline{IRF}$ output to the $\overline{TTS}$ input.

An RS Flip-Flop (the Request Initialization Flip-Flop shown in *Figure 10*) in the control section records the fact that data has been transferred to the stack. This prevents multiple entry of the same word into the stack despite the fact the $\overline{IRF}$ and $\overline{TTS}$ may still be LOW. The Request Initialization Flip-Flop is not cleared until PL goes LOW. Once in the stack, data falls through the stack automatically, pausing only when it is necessary to wait for an empty next location. In the 'F403, as in most modern FIFO designs, the $\overline{MR}$ input only initializes the stack control section and does not clear the data.

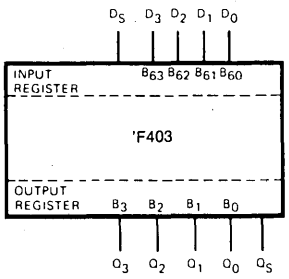

FIG. 2
FINAL POSITIONS IN A 'F403 RESULTING FROM A 64-BIT SERIAL TRAIN

© IC MASTER 1983

Output Register (Data Extraction)—The Output Register receives 4-bit parallel data words from the bottom stack location, stores it and outputs data on a 3-state 4-bit data bus or on a 3-bit serial data bus. The output section generates and receives the necessary status and control signals. *Figure 3* is conceptual logic diagram of the output section.

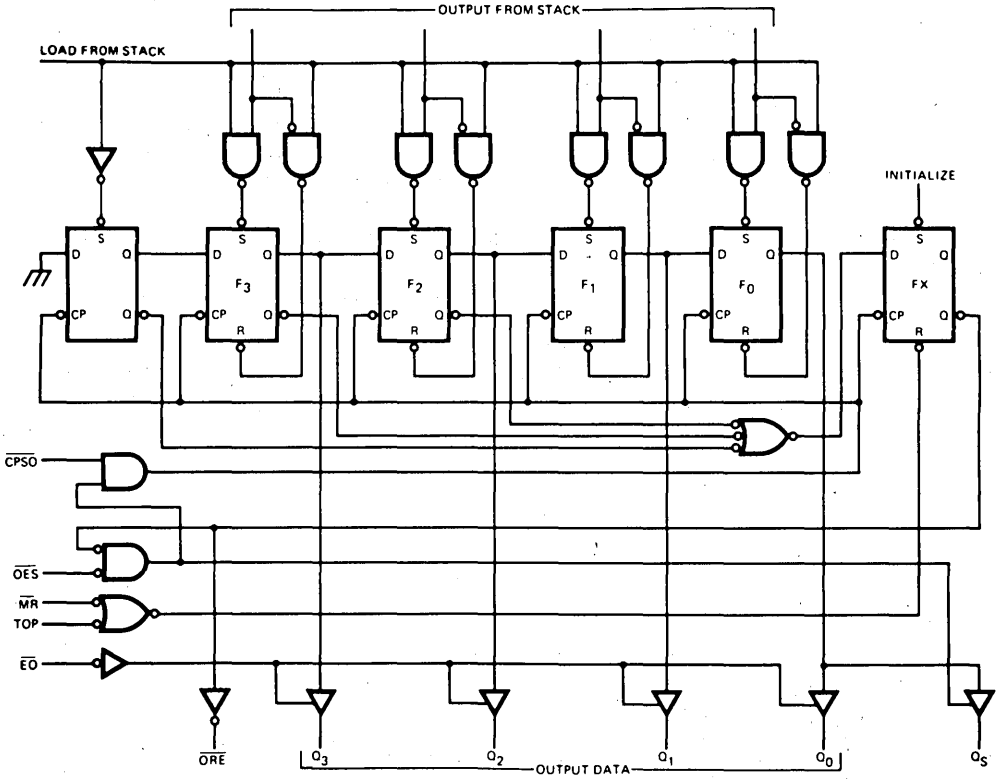

FIG. 3
CONCEPTUAL OUTPUT SECTION

Parallel Data Extraction—When the FIFO is empty after a LOW pulse is applied to $\overline{MR}$, the Output Register Empty ($\overline{ORE}$) output is LOW. After data has been entered into the FIFO and has fallen through to the bottom stack location, it is transferred into the Output Register provided the "Transfer Out Parallel" (TOP) input is HIGH. As a result of the data transfer $\overline{ORE}$ goes HIGH, indicating valid data on the data outputs (provided the 3-state buffer is enabled). TOP can now be used to clock out the next word. When TOP goes LOW, $\overline{ORE}$ will go LOW indicating that the output data has been extracted, but the data itself remains on the output bus until the next HIGH level at TOP permits the transfer of the next word (if available) into the Output Register. During parallel data extraction $\overline{CPSO}$ should be LOW. $\overline{TOS}$ should be grounded for single slice operation or connected to the appropriate $\overline{ORE}$ for expanded operation (see Expansion section).

TOP is not edge triggered. Therefore, if TOP goes HIGH before data is available from the stack, but data does become available before TOP goes LOW again, that data will be transferred into the Output Register. However, internal control circuitry prevents the same data from being transferred twice. If TOP goes HIGH and returns to LOW before data is available from the stack, ORE remains LOW indicating that there is no valid data at the outputs.

Serial Data Extraction—When the FIFO is empty after a LOW pulse is applied to $\overline{MR}$, the Output Register Empty ($\overline{ORE}$) output is LOW. After data has been entered into the FIFO and has fallen through to the bottom stack location, it is transferred into the Output Register provided $\overline{TOS}$ is LOW and TOP is HIGH. As a result of the data transfer $\overline{ORE}$ goes HIGH indicating valid data in the register. The 3-state Serial Data Output, Q_S: is automatically enabled and puts the first data bit on the output bus. Data is serially shifted out on the HIGH-to-LOW transition of $\overline{CPSO}$. To prevent false shifting, $\overline{CPSO}$ should be LOW when the new word is being loaded into the Output Register. The fourth transition empties the shift register, forces $\overline{ORE}$ output LOW and disables the serial output, Q_S (refer to *Figure 3*). For serial operation the $\overline{ORE}$ output may be tied to the $\overline{TOS}$ input, requesting a new word from the stack as soon as the previous one has been shifted out.

© IC MASTER 1983

Horizontal and Vertical Expansion—The 'F403 and 'F433 can be expanded in both the horizontal and vertical directions without any external parts and without sacrificing any of its FIFO's flexibility for serial/parallel input and output. The interconnections necessary to form a 31-word by 16-bit FIFO are shown in *Figure 4*. Using the same technique, any FIFO of (15m + 1) words by (4n) bits can be constructed, where m is the number of devices in a cloumn and n is the number of devices in a row.
